AGENDA
Ardsley Village Board of Trustees

8:00 PM - Monday, December 18, 2023

507 Ashford Avenue & Zoom Platform

The members of the Board of Trustees of the Village of Ardsley will meet in person on Monday, December 18, 2023 at 8:00 p.m. at Village Hall-Court Facility located at 507 Ashford Avenue, Ardsley, New York.

The meetings are conducted using hybrid format and interested parties are invited to observe a meeting either in-person or virtually through the videoconferencing service Zoom which can accessed.

Join Zoom Meeting:

https://us02web.zoom.us/j/84707395258?pwd=SkZJa3NWcFdMMW1obndXZVBVMEZoUT09

Members of the public can listen to the meeting by dialing via phone+1 929 205 6099, Webinar ID: 847 0739 5258

Passcode: 290297

Please note that by dialing in, your phone number will be visible to the host, participants and attendees of the meeting

BROADCAST LIVE ON VERIZON 32/35 & CABLEVISION 75

NOTICE OF PUBLIC HEARING
FOR THE PROPOSED DEVELOPMENT AT 657 SAW MILL RIVER ROAD IN THE VILLAGE OF ARDSLEY

PLEASE TAKE NOTICE, that the Board of Trustees of the Village of Ardsley will hold a public hearing on Monday, September 18, 2023 at 8:00 p.m. or soon thereafter at Village Hall-Court Room, 507 Ashford Avenue, Ardsley, NY 10502 to discuss the proposed development at 657 Saw Mill River Road in the Village of Ardsley.

Please check the calendar on the village website for meeting details at: www.ardsleyvillage.com

Further details on this amendment is available at the Clerk's office, 507 Ashford Avenue, Ardsley, NY during normal office hours Monday through Friday 9:00 am-4:00 pm.

Written comments may be sent to the Village Clerk at arocco@ardsleyvillage.com or sent via regular mail to 507 Ashford Ave, Ardsley, NY 10502. All comments will be shared with the Board of Trustees and questions will be answered as quickly as possible.

All residents and taxpayers are invited to attend.

BY ORDER OF THE BOARD OF TRUSTEES OF THE
VILLAGE OF ARDSLEY, NEW YORK

Ann Marie Rocco
Village Clerk
Dated: September 8, 2023

MEMO FROM: **VILLAGE OF ARDSLEY PLANNING BOARD**
TO: **VILLAGE OF ARDSLEY BOARD OF TRUSTEES**
RE: **PROPOSED GAS STATION AT 657 SAW MILL RIVER ROAD**

GENERAL NOTES

PROPOSED GAS STATION

The proposed gas dispensing plan is for 3 diagonal islands, each island to have 1 pump for a total of 3 pumps, all dispensing on both sides, **for a total of 6 dispensers, with 6 drive-up lanes**. As noted below, the prior station had a total of 4 dispensers, and the neither the owner nor the applicant has the right to increase the non-conforming use.

The proposed building is 2210 square feet (35 x 63+/-), **nearly 50% larger than the existing Shell station; 15 feet deeper, and 15 feet wider).**

The proposed canopy is 30 x 75 (2250 square feet), **nearly 50% longer than the canopy** at the Shell Station, **a consequence of the increased non-conforming use.**

PRIOR GETTY STATION - *Applicant cannot intensify the non-conforming use; that use was as* follows: 1 long island with a small pedestrian break, 2 pumps at each island section with one-sided dispensing **for a total 4 dispensers**, with 2 drive-up lanes**. Those four dispensers would today be 2 pumps, with each dispensing on both sides, for the same total of 4 dispensers.**

SHELL STATION

2 islands (each with a small pedestrian break); all dispensing on both sides, with 4 drive-up lanes

Building 25 deep x 50 wide (1250 square feet)

Canopy 30 x 50 (1500 square feet)

Prior to stating its comments as to the proposed plan, it is important that the Village Board appreciate the extent to which the process has been delayed as a consequence of the applicant's repeated decision to forego appearing at Planning Board meetings, and then, when appearing, failing to incorporate comments made at their prior appearance. For example, the applicant appeared at the December 2021 meeting. The Board asked for alternate layouts, and the Chair stated that two islands and 4 dispensers) would be the limit since that was the extent of the prior non-conforming use which could not be expanded. The applicant did not appear again until May, 2022. At such time, the foregoing comments were ignored. The Building Inspector can detail the number of times the applicant appeared and the failed to carry out the Planning Board's requests. Late in 2022, the applicant appeared and offered plans that took into account at least a number of the Planning Board's comments. That began a discussion which, including a necessary recent follow-up call, resulted in the plan that is now before the Board.

The plan reflects much reduced general pavement areas. It now includes a pathway and green areas along the northerly and north-easterly boundaries of the property, an enlarged sidewalk

area at the front of the property, and other landscape features. In particular, the most recent plan, at the direction of the Board, includes an area with seating at the northerly exit from the property. This was included to soften the view at that property corner which abuts the existing park, and also to possibly provide an attractive pedestrian and/or cyclist meeting or stopping place, including those who might be continuing on to the South County Trailway. The area would also include a free air location for automobiles which, of course, cyclists could also use.

Planning Board member Susan Jainchill has provided separate comments discussing the overall layout of the site design that would locate the building near and parallel to Sawmill River Road. However, Ms. Jainchill has contributed comments to this memo as well assuming that the Board of Trustees would grant approval of the building at the rear of the property. While the other Board members generally agree with the overarching thrust of Susan's comments, they do not agree that locating the building in the front of the property is preferred given the specific location of the property, the neighboring properties, and the associate view sheds.

Notwithstanding the significant improvements in the plan presented, the following comments remain, the first two of which the applicant has thus far refused to incorporate:

1. The number of islands needs to be reduced to two islands with one pump at each for a total of 4 dispensing locations; as a matter of law, an increase in the non-conforming use beyond the foregoing is not permitted, and this would match what previously existed. Note that the size of the canopy is a function of the number of islands and pumps, and, especially lanes, and the proposed canopy which is 50% longer than that at the Shell station, would be reduced for the permitted number of dispensers under common law restriction against increased non-conforming use, also resulting in less light pollution. As for the canopy, whatever canopy is ultimately approved, it must be minimized, and it should have a proper slope and be shingled; a sample is shown in the attached photo.

2. The building should be reduced in size; it is 50% larger than the Shell Building, and while the Shell building is not necessarily limiting, and the applicant mentioned that some additional products would be sold at the proposed station, the much larger building impacts the entire site, including, ease of turning, parking, and visual impact, and, needless to say, could impact existing businesses in the vicinity. While the applicant may argue that the building size is as of right, the Board is entitled to consider the size and modify it based upon other site plan considerations, including increased parking.

3. The labeling of locations 'meditation area', 'dog park', and 'bird bath' were not directed by the Planning Board. Certain portions of these areas may better serve the Village as part of the stream buffer planting or as a location for a rain garden or other green infrastructure for stormwater management with some seating in all events.

4. All vegetation selected to be planted on the property should be native to the region, drought tolerant and resistant to deer. All areas that appear to be maintained lawn should utilize alternatives to lawn such as low groundcover species, low growing hedges, or maintained wild meadow seed mix (in the western most sloped area). These alternatives would add ecological services to the vegetated areas that lawn does not provide.

Retail Building Design/Canopy/Signage

As noted above, there are two proposed structures. The retail building and a canopy that extends over the pumps.

Retail Building

A traditionally styled building with a steep gable roofs 12:12 or steeper, utilizing "honest" exterior materials is preferred Honest materials do not imitate another material. For example, metal roofing that is trying to look like wood roof shingles is not honest. A maximum of 3 colors for all materials for both structures ought to be required .

Canopy

A shingled gable roof is desirable and ought to be required. Clutter must be minimized and the fire suppression tanks hidden if at all possible for a clean minimal look. See attached photo for an example of a gabled canopy.

Signage

Company signage and Price signs should be as small as possible and adhere to the Village Code without exception. The goal being a neat appearance.

Traffic

All traffic discussions regarding 9A are pending review by NY DOT. However, several studies of potential fuel truck delivery pathways were presented. The most troubling alternatives proposed that fuel trucks exiting the site turn left (southbound) on 9A thus blocking all lanes, both northbound and suthbound on 9A. The trucks are very long. The owner of the property agreed this was unacceptable and promised that the final design would have trucks exit right (northbound) only. The layout of curbs and driveways in the latest design still do not make a right turn possible for the fuel trucks.

Environmental Concerns

There is a stream adjacent to the site. Contaminants such as oil and even road salt used in snow removal on the Site will certainly kill life in this stream if allowed to enter. This stream is a tributary of the Sawmill River. Any contamination of this stream will have impacts on fish, birds and insects downstream. The Board asked the applicants for a detailed design of the stream bank that falls on their site. This was at our last meeting, and we have not seen a response. Both natural and engineered solutions that will protect the waterway should be presented by the applicant.

Susan Jainchill's supplemental comments to the Ardsley Village Board of Trustees

The Applicant is proposing a new gas station to be constructed on a site where, I understand, the use is permitted. However, the form of the gas station as well as its function, do not comply with the intent of the recently adopted Village Comprehensive Plan.

The Board of Trusties should note that the proposed site plan under consideration, with the building located at the far east part of the lot, would result in a continuous expanse of pavement from the face of Carvel, through 3 lanes of Sawmill River Road, over new sidewalk and through the fueling island and circulation area to the face of the new building. It will be 200+ feet of pavement broken only by a 8' wide planted island. This proposal perpetuates the patterns of Ardsley's development that has brought us to the current conditions of our Village; conditions which all agree need improvement.

The proposed site plan does not achieve any of the stated objectives in the Comprehensive Plan. The applicant has provided an alternative site plan, as requested by the Planning Board, that shows the building located closer to Sawmill River Road. I am in favor of this alternative plan and I believe it is a feasible alternative to fulfill the financial objectives of the applicant as well as objectives of the Comprehensive Plan.

A building closer to the roadway, with retail space accessed from the public sidewalk would contribute to achieving an active and comfortable pedestrian streetscape that the Village seeks to create. The new structure would form a 'street wall', beginning a new pattern for Ardsley's development. A defined street wall would signal to drivers that they are entering a village center and that they should slow down and be aware. In addition, the building in this position would begin to frame views and limit the vast expanse of asphalt pavement. The gas pumps/ islands located in the rear of the property, partially concealed by landscaping and the new structure.
I would like to take this opportunity to recognize that the Applicant is simply proposing what is expected.

Owners of properties in Ardsley's Business District are faced with a challenge. Naturally, any property owner's investment is geared toward private financial objectives. At the same time, owners recognize and welcome the potential for their private investment to add to the attraction of the Village and the economic strength of the community. The problem is that the owner of an individual parcel is not in a position to know what they can propose, what improvements can be made or how they can develop their property to benefit the Village and the community. Therefor an owner or an applicant can have only one objective – to achieve the greatest financially beneficial development within their single parcel. Their design, their vision, does not and cannot not extend beyond their property lines.

Ardsley needs a clear comprehensive vision, or Village Business District Master Plan.

With the Villages' 2021 Comprehensive Plan, a 'vison' has been put down *in words*. I would argue that it is not a 'vision', but rather a set of goals and objectives. The Comprehensive Plan organizes

the objectives into five categories: Provide, Strengthen, Connect, Build, Protect. The objectives are clarified *in words* as a walkable mixed-use neighborhood with a wide range of retail experience. The Village, according to the Comprehensive Plan, should be an attractive commercial environment with environmentally responsible and efficient buildings and connections to the natural resources. It is anticipated that *the words* of the Comprehensive Plan will be translated into a new zoning code in the near future.

A new ordinance, will codify restrictions and requirements for future development, but this will not get us any closer to a *future Ardsley,* as envisioned in the Comprehensive Plan. The owner of the individual parcel will still limit their vision to the property lines. The property owner can not consider public objectives without a Master Plan that clarifies how their parcel can fit into the whole picture of a future Village.

A Village Business District Master Plan will be a tool for development. It will communicate what the future of Ardsley can look like. A Master Plan will be a step forward, beyond regulation; it will provide inspiration. At the same time, it will provide owners and applicants clearer understanding of what the Village *wants* to see. This will make the application and approvals process more efficient and cost effective for both the Village and the applicant.

Full Environmental Assessment Form
Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1is accurate and complete.

A. Project and Applicant/Sponsor Information.

Name of Action or Project: Gas Station / Convenience Market		
Project Location (describe, and attach a general location map): 657 Saw Mill River Road, Ardsley, NY 10502		
Brief Description of Proposed Action (include purpose or need): Site work on this project includes demolition of the existing gas station convenience store building, installation of six new fueling locations under a 75'x36' canopy, and subsurface gas tanks and installation of stormwater mitigation systems that will be further detailed in this report. A 2,210 square foot convenience store building will be installed with a total of 12 proposed parking spaces (not including the six pump spaces) with associated driveway, sidewalk, landscape and stormwater modifications.		
Name of Applicant/Sponsor: Thornwood Four Corners LLC. (c/o Bryan Orser)	Telephone: (914) 769-0366 E-Mail: bryan@americantransit.us	
Address: 25 St. Charles Street		
City/PO: Thornwood	State: New York	Zip Code: 10594
Project Contact (if not same as sponsor; give name and title/role): Bryan Orser, General Manager	Telephone: 914-769-0366 E-Mail: bryan@americantransit.us	
Address: 25 St. Charles Street		
City/PO: Thornwood	State: New York	Zip Code: 10594
Property Owner (if not same as sponsor): The Thorpe-McCartney Family Limited Partnership	Telephone: E-Mail:	
Address: 19 Grandview Lane		
City/PO: Thornwood	State: New York	Zip Code: 10594

B. Government Approvals

B. Government Approvals, Funding, or Sponsorship. ("Funding" includes grants, loans, tax relief, and any other forms of financial assistance.)		
Government Entity	**If Yes: Identify Agency and Approval(s) Required**	**Application Date (Actual or projected)**
a. City Counsel, Town Board, or Village Board of Trustees ☑Yes ☐No	Village Board of Trustees Site Plan Approval	
b. City, Town or Village Planning Board or Commission ☐Yes ☑No		
c. City, Town or Village Zoning Board of Appeals ☐Yes ☑No		
d. Other local agencies ☑Yes ☐No	Village of Ardsley Building Department: Building Permit	
e. County agencies ☑Yes ☐No	WCDOH: Petroleum Bulk Storage	
f. Regional agencies ☐Yes ☑No		
g. State agencies ☑Yes ☐No	NYSDOT: Highway Work Permit NYSDEC: Site Remediation	
h. Federal agencies ☐Yes ☑No		
i. Coastal Resources. *i.* Is the project site within a Coastal Area, or the waterfront area of a Designated Inland Waterway? ☐Yes ☑No *ii.* Is the project site located in a community with an approved Local Waterfront Revitalization Program? ☐Yes ☑No *iii.* Is the project site within a Coastal Erosion Hazard Area? ☐Yes ☑No		

C. Planning and Zoning

C.1. Planning and zoning actions.	
Will administrative or legislative adoption, or amendment of a plan, local law, ordinance, rule or regulation be the only approval(s) which must be granted to enable the proposed action to proceed? • **If Yes,** complete sections C, F and G. • **If No,** proceed to question C.2 and complete all remaining sections and questions in Part 1	☐Yes ☑No
C.2. Adopted land use plans.	
a. Do any municipally- adopted (city, town, village or county) comprehensive land use plan(s) include the site where the proposed action would be located?	☑Yes ☐No
If Yes, does the comprehensive plan include specific recommendations for the site where the proposed action would be located?	☑Yes ☐No
b. Is the site of the proposed action within any local or regional special planning district (for example: Greenway; Brownfield Opportunity Area (BOA); designated State or Federal heritage area; watershed management plan; or other?) If Yes, identify the plan(s): _____ _____ _____	☐Yes ☑No
c. Is the proposed action located wholly or partially within an area listed in an adopted municipal open space plan, or an adopted municipal farmland protection plan? If Yes, identify the plan(s): _____ _____ _____	☐Yes ☑No

C.3. Zoning

a. Is the site of the proposed action located in a municipality with an adopted zoning law or ordinance. ☑ Yes ☐ No
If Yes, what is the zoning classification(s) including any applicable overlay district?
B-1 "General Business District"

b. Is the use permitted or allowed by a special or conditional use permit? ☐ Yes ☑ No

c. Is a zoning change requested as part of the proposed action? ☐ Yes ☑ No
If Yes,
i. What is the proposed new zoning for the site? _____

C.4. Existing community services.

a. In what school district is the project site located? Ardsley School District

b. What police or other public protection forces serve the project site?
Ardsley Police Department

c. Which fire protection and emergency medical services serve the project site?
Ardsley Fire and EMS

d. What parks serve the project site?
VE Macy Park & Juhring Nature Preserve

D. Project Details

D.1. Proposed and Potential Development

a. What is the general nature of the proposed action (e.g., residential, industrial, commercial, recreational; if mixed, include all components)? Commercial

b. a. Total acreage of the site of the proposed action? 0.53 acres
b. Total acreage to be physically disturbed? 0.53 acres
c. Total acreage (project site and any contiguous properties) owned or controlled by the applicant or project sponsor? 0.53 acres

c. Is the proposed action an expansion of an existing project or use? ☐ Yes ☑ No
i. If Yes, what is the approximate percentage of the proposed expansion and identify the units (e.g., acres, miles, housing units, square feet)? % _____ Units: _____

d. Is the proposed action a subdivision, or does it include a subdivision? ☐ Yes ☑ No
If Yes,
i. Purpose or type of subdivision? (e.g., residential, industrial, commercial; if mixed, specify types)
_____
ii. Is a cluster/conservation layout proposed? ☐ Yes ☐ No
iii. Number of lots proposed? _____
iv. Minimum and maximum proposed lot sizes? Minimum _____ Maximum _____

e. Will the proposed action be constructed in multiple phases? ☐ Yes ☑ No
i. If No, anticipated period of construction: 9 months
ii. If Yes:
- Total number of phases anticipated _____
- Anticipated commencement date of phase 1 (including demolition) _____ month _____ year
- Anticipated completion date of final phase _____ month _____year
- Generally describe connections or relationships among phases, including any contingencies where progress of one phase may determine timing or duration of future phases: _____

f. Does the project include new residential uses? ☐ Yes ☑ No

If Yes, show numbers of units proposed.

	One Family	Two Family	Three Family	Multiple Family (four or more)
Initial Phase				
At completion of all phases				

g. Does the proposed action include new non-residential construction (including expansions)? ☑ Yes ☐ No

If Yes,

i. Total number of structures 2

ii. Dimensions (in feet) of largest proposed structure: +/- 25 height; 34' width; and 65' length

iii. Approximate extent of building space to be heated or cooled: 2,210 square feet

h. Does the proposed action include construction or other activities that will result in the impoundment of any liquids, such as creation of a water supply, reservoir, pond, lake, waste lagoon or other storage? ☐ Yes ☑ No

If Yes,

i. Purpose of the impoundment: _____

ii. If a water impoundment, the principal source of the water: ☐ Ground water ☐ Surface water streams ☐ Other specify:

_____

iii. If other than water, identify the type of impounded/contained liquids and their source.

_____

iv. Approximate size of the proposed impoundment. Volume: _____ million gallons; surface area: _____ acres

v. Dimensions of the proposed dam or impounding structure: _____ height; _____ length

vi. Construction method/materials for the proposed dam or impounding structure (e.g., earth fill, rock, wood, concrete):

_____

D.2. Project Operations

a. Does the proposed action include any excavation, mining, or dredging, during construction, operations, or both? (Not including general site preparation, grading or installation of utilities or foundations where all excavated materials will remain onsite) ☐ Yes ☑ No

If Yes:

i .What is the purpose of the excavation or dredging? _____

ii. How much material (including rock, earth, sediments, etc.) is proposed to be removed from the site?

- Volume (specify tons or cubic yards): _____
- Over what duration of time? _____

iii. Describe nature and characteristics of materials to be excavated or dredged, and plans to use, manage or dispose of them.

_____

_____

i*v.* Will there be onsite dewatering or processing of excavated materials? ☐ Yes ☐ No

If yes, describe. _____

_____

v. What is the total area to be dredged or excavated? _____acres

vi. What is the maximum area to be worked at any one time? _____ acres

vii. What would be the maximum depth of excavation or dredging? _____ feet

viii. Will the excavation require blasting? ☐ Yes ☐ No

ix. Summarize site reclamation goals and plan: _____

_____

_____

b. Would the proposed action cause or result in alteration of, increase or decrease in size of, or encroachment into any existing wetland, waterbody, shoreline, beach or adjacent area? ☑ Yes ☐ No

If Yes:

i. Identify the wetland or waterbody which would be affected (by name, water index number, wetland map number or geographic description): Disturbance only to the Bramble Brook buffer area

_____

ii. Describe how the proposed action would affect that waterbody or wetland, e.g. excavation, fill, placement of structures, or alteration of channels, banks and shorelines. Indicate extent of activities, alterations and additions in square feet or acres:

iii. Will the proposed action cause or result in disturbance to bottom sediments? ☐ Yes ☑ No
If Yes, describe:

iv. Will the proposed action cause or result in the destruction or removal of aquatic vegetation? ☐ Yes ☑ No
If Yes:

- acres of aquatic vegetation proposed to be removed:
- expected acreage of aquatic vegetation remaining after project completion:
- purpose of proposed removal (e.g. beach clearing, invasive species control, boat access):
- proposed method of plant removal:
- if chemical/herbicide treatment will be used, specify product(s):

v. Describe any proposed reclamation/mitigation following disturbance:

c. Will the proposed action use, or create a new demand for water? ☑ Yes ☐ No
If Yes:

i. Total anticipated water usage/demand per day: 400 gallons/day

ii. Will the proposed action obtain water from an existing public water supply? ☐ Yes ☐ No
If Yes:

- Name of district or service area: United Water New Rochelle - West (Veolia)
- Does the existing public water supply have capacity to serve the proposal? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No
- Do existing lines serve the project site? ☑ Yes ☐ No

iii. Will line extension within an existing district be necessary to supply the project? ☐ Yes ☑ No
If Yes:

- Describe extensions or capacity expansions proposed to serve this project:
- Source(s) of supply for the district:

iv. Is a new water supply district or service area proposed to be formed to serve the project site? ☐ Yes ☑ No
If, Yes:

- Applicant/sponsor for new district:
- Date application submitted or anticipated:
- Proposed source(s) of supply for new district:

v. If a public water supply will not be used, describe plans to provide water supply for the project:

vi. If water supply will be from wells (public or private), what is the maximum pumping capacity: _____ gallons/minute.

d. Will the proposed action generate liquid wastes? ☑ Yes ☐ No
If Yes:

i. Total anticipated liquid waste generation per day: 400 gallons/day

ii. Nature of liquid wastes to be generated (e.g., sanitary wastewater, industrial; if combination, describe all components and approximate volumes or proportions of each):
Sanitary Wastewater

iii. Will the proposed action use any existing public wastewater treatment facilities? ☑ Yes ☐ No
If Yes:

- Name of wastewater treatment plant to be used: Yonkers Treatment Plant
- Name of district: Saw Mill
- Does the existing wastewater treatment plant have capacity to serve the project? ☑ Yes ☐ No
- Is the project site in the existing district? ☑ Yes ☐ No
- Is expansion of the district needed? ☐ Yes ☑ No

- Do existing sewer lines serve the project site? ☑ Yes ☐ No
- Will a line extension within an existing district be necessary to serve the project? ☐ Yes ☑ No

  If Yes:
  - Describe extensions or capacity expansions proposed to serve this project: _____

iv. Will a new wastewater (sewage) treatment district be formed to serve the project site? ☐ Yes ☑ No

If Yes:
- Applicant/sponsor for new district: _____
- Date application submitted or anticipated: _____
- What is the receiving water for the wastewater discharge? _____

v. If public facilities will not be used, describe plans to provide wastewater treatment for the project, including specifying proposed receiving water (name and classification if surface discharge or describe subsurface disposal plans):

_____

vi. Describe any plans or designs to capture, recycle or reuse liquid waste: _____

e. Will the proposed action disturb more than one acre and create stormwater runoff, either from new point sources (i.e. ditches, pipes, swales, curbs, gutters or other concentrated flows of stormwater) or non-point source (i.e. sheet flow) during construction or post construction? ☐ Yes ☑ No

If Yes:

i. How much impervious surface will the project create in relation to total size of project parcel?

_____ Square feet or _____ acres (impervious surface)

_____ Square feet or _____ acres (parcel size)

ii. Describe types of new point sources. _____

iii. Where will the stormwater runoff be directed (i.e. on-site stormwater management facility/structures, adjacent properties, groundwater, on-site surface water or off-site surface waters)?

_____

- If to surface waters, identify receiving water bodies or wetlands: _____
- Will stormwater runoff flow to adjacent properties? ☐ Yes ☐ No

iv. Does the proposed plan minimize impervious surfaces, use pervious materials or collect and re-use stormwater? ☐ Yes ☐ No

f. Does the proposed action include, or will it use on-site, one or more sources of air emissions, including fuel combustion, waste incineration, or other processes or operations? ☐ Yes ☑ No

If Yes, identify:

i. Mobile sources during project operations (e.g., heavy equipment, fleet or delivery vehicles)

_____

ii. Stationary sources during construction (e.g., power generation, structural heating, batch plant, crushers)

_____

iii. Stationary sources during operations (e.g., process emissions, large boilers, electric generation)

_____

g. Will any air emission sources named in D.2.f (above), require a NY State Air Registration, Air Facility Permit, or Federal Clean Air Act Title IV or Title V Permit? ☐ Yes ☑ No

If Yes:

i. Is the project site located in an Air quality non-attainment area? (Area routinely or periodically fails to meet ambient air quality standards for all or some parts of the year) ☐ Yes ☐ No

ii. In addition to emissions as calculated in the application, the project will generate:
- _____Tons/year (short tons) of Carbon Dioxide (CO_2)
- _____Tons/year (short tons) of Nitrous Oxide (N_2O)
- _____Tons/year (short tons) of Perfluorocarbons (PFCs)
- _____Tons/year (short tons) of Sulfur Hexafluoride (SF_6)
- _____Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)
- _____Tons/year (short tons) of Hazardous Air Pollutants (HAPs)

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? ☐Yes ☑No

If Yes:

i. Estimate methane generation in tons/year (metric): _____

ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): _____

i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? ☐Yes ☑No

If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):

_____

j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? ☐Yes ☑No

If Yes:

i. When is the peak traffic expected (Check all that apply): ☐ Morning ☐ Evening ☐Weekend ☐ Randomly between hours of _____ to _____.

ii. For commercial activities only, projected number of truck trips/day and type (e.g., semi trailers and dump trucks): _____

iii. Parking spaces: Existing _____ Proposed _____ Net increase/decrease _____

iv. Does the proposed action include any shared use parking? ☐Yes ☐No

v. If the proposed action includes any modification of existing roads, creation of new roads or change in existing access, describe:

vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? ☐Yes ☐No

vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? ☐Yes ☐No

viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? ☐Yes ☐No

k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? ☑Yes ☐No

If Yes:

i. Estimate annual electricity demand during operation of the proposed action: _____

35,000 kWh (not including additional demand for 2-level 3 duel car charging ports)

ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/local utility, or other):

Consolidated Edison

iii. Will the proposed action require a new, or an upgrade, to an existing substation? ☐Yes ☑No

l. Hours of operation. Answer all items which apply.

i. During Construction:

- Monday - Friday: 7:00 am - 6:00 pm
- Saturday: 7:00 am - 6:00 pm
- Sunday: 7:00 am - 6:00 pm
- Holidays: N/A

ii. During Operations:

- Monday - Friday: 24 hours
- Saturday: 24 hours
- Sunday: 24 hours
- Holidays: 24 hours

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both? ☐ Yes ☑ No

If yes:

i. Provide details including sources, time of day and duration:

ii. Will the proposed action remove existing natural barriers that could act as a noise barrier or screen? ☐ Yes ☐ No

Describe:

n. Will the proposed action have outdoor lighting? ☑ Yes ☐ No

If yes:

i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures:

Proposed lighting will include downward facing directed light fixtures as well as building mounted lighting.

ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? ☑ Yes ☐ No

Describe: A portion of the existing vegetation in the rear of the property is proposed to be removed.

o. Does the proposed action have the potential to produce odors for more than one hour per day? ☐ Yes ☑ No

If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures:

p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? ☑ Yes ☐ No

If Yes:

i. Product(s) to be stored gasoline and diesel fuel for the existing filling station which will be compliance with applicable regulations

ii. Volume(s) 60,000 per unit time month (e.g., month, year)

iii. Generally, describe the proposed storage facilities:

Underground fuel storage tanks

q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? ☑ Yes ☐ No

If Yes:

i. Describe proposed treatment(s):

Limited use to maintain landscaping in accordance with state and local requirements

ii. Will the proposed action use Integrated Pest Management Practices? ☑ Yes ☐ No

r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? ☑ Yes ☐ No

If Yes:

i. Describe any solid waste(s) to be generated during construction or operation of the facility:

- Construction: +/- 1.0 tons per construction debris (unit of time)
- Operation : +/- 0.7 tons per month (unit of time)

ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste:

- Construction: Debris recycling will be in accordance with all applicable local requirements
- Operation: Recycling will be in accordance with county requirements

iii. Proposed disposal methods/facilities for solid waste generated on-site:

- Construction: Solid construction waste will be disposed of in accordance with all applicable local requirements
- Operation: Solid waste and recyclable materials will be collected and disposed of by private carting company.

s. Does the proposed action include construction or modification of a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or other disposal activities): _____

ii. Anticipated rate of disposal/processing:

- _____ Tons/month, if transfer or other non-combustion/thermal treatment, or
- _____ Tons/hour, if combustion or thermal treatment

iii. If landfill, anticipated site life: _____ years

t. Will the proposed action at the site involve the commercial generation, treatment, storage, or disposal of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Name(s) of all hazardous wastes or constituents to be generated, handled or managed at facility: _____

ii. Generally describe processes or activities involving hazardous wastes or constituents: _____

iii. Specify amount to be handled or generated _____ tons/month

iv. Describe any proposals for on-site minimization, recycling or reuse of hazardous constituents: _____

v. Will any hazardous wastes be disposed at an existing offsite hazardous waste facility? ☐ Yes ☐ No

If Yes: provide name and location of facility: _____

If No: describe proposed management of any hazardous wastes which will not be sent to a hazardous waste facility:

E. Site and Setting of Proposed Action

E.1. Land uses on and surrounding the project site

a. Existing land uses.

i. Check all uses that occur on, adjoining and near the project site.

☑ Urban ☐ Industrial ☑ Commercial ☑ Residential (suburban) ☐ Rural (non-farm)
☐ Forest ☐ Agriculture ☐ Aquatic ☐ Other (specify): _____

ii. If mix of uses, generally describe:

b. Land uses and covertypes on the project site.

Land use or Covertype	Current Acreage	Acreage After Project Completion	Change (Acres +/-)
• Roads, buildings, and other paved or impervious surfaces	0.43	0.38	-0.05
• Forested			
• Meadows, grasslands or brushlands (non-agricultural, including abandoned agricultural)	0.08	0.13	+0.05
• Agricultural (includes active orchards, field, greenhouse etc.)			
• Surface water features (lakes, ponds, streams, rivers, etc.)	0.02	0.02	No Change
• Wetlands (freshwater or tidal)			
• Non-vegetated (bare rock, earth or fill)			
• Other Describe: _____			

c. Is the project site presently used by members of the community for public recreation? ☐ Yes ☑ No

i. If Yes: explain: _____

d. Are there any facilities serving children, the elderly, people with disabilities (e.g., schools, hospitals, licensed day care centers, or group homes) within 1500 feet of the project site? ☐ Yes ☑ No

If Yes,

i. Identify Facilities:

_____

_____

e. Does the project site contain an existing dam? ☐ Yes ☑ No

If Yes:

i. Dimensions of the dam and impoundment:

- Dam height: _____ feet
- Dam length: _____ feet
- Surface area: _____ acres
- Volume impounded: _____ gallons OR acre-feet

ii. Dam's existing hazard classification: _____

iii. Provide date and summarize results of last inspection:

_____

_____

f. Has the project site ever been used as a municipal, commercial or industrial solid waste management facility, or does the project site adjoin property which is now, or was at one time, used as a solid waste management facility? ☐ Yes ☑ No

If Yes:

i. Has the facility been formally closed? ☐ Yes ☐ No

- If yes, cite sources/documentation: _____

ii. Describe the location of the project site relative to the boundaries of the solid waste management facility:

_____

_____

iii. Describe any development constraints due to the prior solid waste activities: _____

_____

g. Have hazardous wastes been generated, treated and/or disposed of at the site, or does the project site adjoin property which is now or was at one time used to commercially treat, store and/or dispose of hazardous waste? ☐ Yes ☑ No

If Yes:

i. Describe waste(s) handled and waste management activities, including approximate time when activities occurred:

_____

_____

h. Potential contamination history. Has there been a reported spill at the proposed project site, or have any remedial actions been conducted at or adjacent to the proposed site? ☑ Yes ☐ No

If Yes:

i. Is any portion of the site listed on the NYSDEC Spills Incidents database or Environmental Site Remediation database? Check all that apply: ☑ Yes ☐ No

☑ Yes – Spills Incidents database — Provide DEC ID number(s): (Please see attached information from the

☐ Yes – Environmental Site Remediation database — Provide DEC ID number(s): NYSDEC database)

☐ Neither database

ii. If site has been subject of RCRA corrective activities, describe control measures:_____

_____

_____

iii. Is the project within 2000 feet of any site in the NYSDEC Environmental Site Remediation database? ☐ Yes ☑ No

If yes, provide DEC ID number(s): _____

iv. If yes to (i), (ii) or (iii) above, describe current status of site(s):

(Please see attached information from the NYSDEC database)_____

_____

v. Is the project site subject to an institutional control limiting property uses? ☐ Yes ☑ No

- If yes, DEC site ID number: _____
- Describe the type of institutional control (e.g., deed restriction or easement): _____
- Describe any use limitations: _____
- Describe any engineering controls: _____
- Will the project affect the institutional or engineering controls in place? ☐ Yes ☐ No
- Explain: _____

E.2. Natural Resources On or Near Project Site

a. What is the average depth to bedrock on the project site? >6 feet

b. Are there bedrock outcroppings on the project site? ☐ Yes ☑ No
If Yes, what proportion of the site is comprised of bedrock outcroppings? _____%

c. Predominant soil type(s) present on project site:

Uf - Urban Land	100 %
	%
	%

d. What is the average depth to the water table on the project site? Average: >5.5 feet

e. Drainage status of project site soils:

☐	Well Drained:	% of site
☐	Moderately Well Drained:	% of site
☑	Poorly Drained	100 % of site

f. Approximate proportion of proposed action site with slopes:

☑	0-10%:	76.9 % of site
☑	10-15%:	6.1 % of site
☑	15% or greater:	17.0 % of site

g. Are there any unique geologic features on the project site? ☐ Yes ☑ No
If Yes, describe: _____

h. Surface water features.

i. Does any portion of the project site contain wetlands or other waterbodies (including streams, rivers, ponds or lakes)? ☐ Yes ☑ No

ii. Do any wetlands or other waterbodies adjoin the project site? ☑ Yes ☐ No

If Yes to either *i* or *ii*, continue. If No, skip to E.2.i.

iii. Are any of the wetlands or waterbodies within or adjoining the project site regulated by any federal, state or local agency? ☑ Yes ☐ No

iv. For each identified regulated wetland and waterbody on the project site, provide the following information:

- Streams: Name Locally Regulated Watercourse (Bramble Brook) Classification Not Classified
- Lakes or Ponds: Name _____ Classification _____
- Wetlands: Name _____ Approximate Size _____
- Wetland No. (if regulated by DEC) _____

v. Are any of the above water bodies listed in the most recent compilation of NYS water quality-impaired waterbodies? ☐ Yes ☑ No

If yes, name of impaired water body/bodies and basis for listing as impaired: _____

i. Is the project site in a designated Floodway? ☐ Yes ☑ No

j. Is the project site in the 100-year Floodplain? ☐ Yes ☑ No

k. Is the project site in the 500-year Floodplain? ☑ Yes ☐ No

l. Is the project site located over, or immediately adjoining, a primary, principal or sole source aquifer? ☐ Yes ☑ No
If Yes:

i. Name of aquifer: _____

m. Identify the predominant wildlife species that occupy or use the project site: _____
Typical suburban wildlife species _____ _____ _____
_____ _____ _____

n. Does the project site contain a designated significant natural community? ☐ Yes ☑ No
If Yes:
i. Describe the habitat/community (composition, function, and basis for designation): _____
_____
ii. Source(s) of description or evaluation: _____
iii. Extent of community/habitat:
- Currently: _____ acres
- Following completion of project as proposed: _____ acres
- Gain or loss (indicate + or -): _____ acres

o. Does project site contain any species of plant or animal that is listed by the federal government or NYS as endangered or threatened, or does it contain any areas identified as habitat for an endangered or threatened species? ☐ Yes ☑ No

If Yes:
i. Species and listing (endangered or threatened):_____
_____
_____

p. Does the project site contain any species of plant or animal that is listed by NYS as rare, or as a species of special concern? ☐ Yes ☑ No

If Yes:
i. Species and listing:_____
_____

q. Is the project site or adjoining area currently used for hunting, trapping, fishing or shell fishing? ☐ Yes ☑ No
If yes, give a brief description of how the proposed action may affect that use: _____
_____

E.3. Designated Public Resources On or Near Project Site

a. Is the project site, or any portion of it, located in a designated agricultural district certified pursuant to Agriculture and Markets Law, Article 25-AA, Section 303 and 304? ☐ Yes ☑ No
If Yes, provide county plus district name/number: _____

b. Are agricultural lands consisting of highly productive soils present? ☐ Yes ☑ No
i. If Yes: acreage(s) on project site? _____
ii. Source(s) of soil rating(s): _____

c. Does the project site contain all or part of, or is it substantially contiguous to, a registered National Natural Landmark? ☐ Yes ☑ No
If Yes:
i. Nature of the natural landmark: ☐ Biological Community ☐ Geological Feature
ii. Provide brief description of landmark, including values behind designation and approximate size/extent: _____
_____
_____

d. Is the project site located in or does it adjoin a state listed Critical Environmental Area? ☐ Yes ☑ No
If Yes:
i. CEA name: _____
ii. Basis for designation: _____
iii. Designating agency and date: _____

e. Does the project site contain, or is it substantially contiguous to, a building, archaeological site, or district which is listed on the National or State Register of Historic Places, or that has been determined by the Commissioner of the NYS Office of Parks, Recreation and Historic Preservation to be eligible for listing on the State Register of Historic Places? ☐ Yes ☑ No

If Yes:

i. Nature of historic/archaeological resource: ☐ Archaeological Site ☐ Historic Building or District

ii. Name: _____

iii. Brief description of attributes on which listing is based:

_____

f. Is the project site, or any portion of it, located in or adjacent to an area designated as sensitive for archaeological sites on the NY State Historic Preservation Office (SHPO) archaeological site inventory? ☑ Yes ☐ No

g. Have additional archaeological or historic site(s) or resources been identified on the project site? ☐ Yes ☑ No

If Yes:

i. Describe possible resource(s): _____

ii. Basis for identification: _____

h. Is the project site within fives miles of any officially designated and publicly accessible federal, state, or local scenic or aesthetic resource? ☑ Yes ☐ No

If Yes:

i. Identify resource: Taconic Parkway and Bronx River Parkway

ii. Nature of, or basis for, designation (e.g., established highway overlook, state or local park, state historic trail or scenic byway, etc.): _____

iii. Distance between project and resource: 2.0 and 2.5 miles.

i. Is the project site located within a designated river corridor under the Wild, Scenic and Recreational Rivers Program 6 NYCRR 666? ☐ Yes ☑ No

If Yes:

i. Identify the name of the river and its designation: _____

ii. Is the activity consistent with development restrictions contained in 6NYCRR Part 666? ☐ Yes ☐ No

F. Additional Information

Attach any additional information which may be needed to clarify your project.

If you have identified any adverse impacts which could be associated with your proposal, please describe those impacts plus any measures which you propose to avoid or minimize them.

G. Verification

I certify that the information provided is true to the best of my knowledge.

Applicant/Sponsor Name JMC, PLLC - Rick Bohlander Date 12/04/2023

Signature _____ Title Engineer

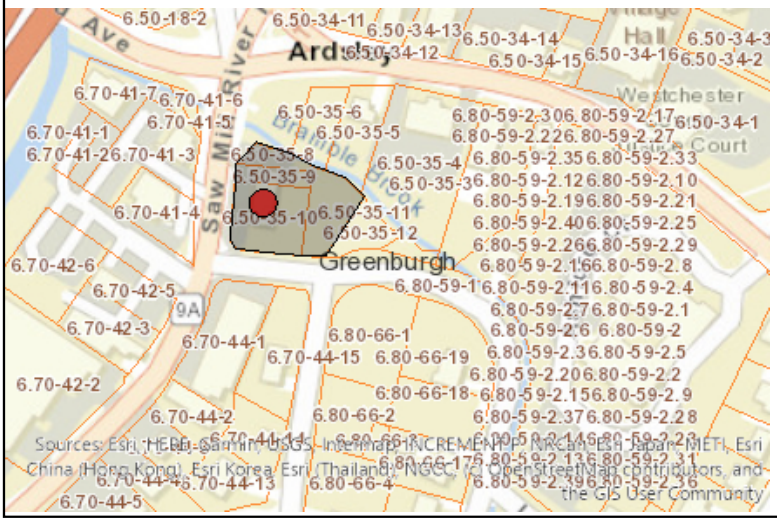
EAF Mapper Summary Report

Monday, November 20, 2023 2:16 PM



Disclaimer: The EAF Mapper is a screening tool intended to assist project sponsors and reviewing agencies in preparing an environmental assessment form (EAF). Not all questions asked in the EAF are answered by the EAF Mapper. Additional information on any EAF question can be obtained by consulting the EAF Workbooks. Although the EAF Mapper provides the most up-to-date digital data available to DEC, you may also need to contact local or other data sources in order to obtain data not provided by the Mapper. Digital data is not a substitute for agency determinations.

B.i.i [Coastal or Waterfront Area]	No
B.i.ii [Local Waterfront Revitalization Area]	No
C.2.b. [Special Planning District]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h [DEC Spills or Remediation Site - Potential Contamination History]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Listed]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.i [DEC Spills or Remediation Site - Environmental Site Remediation Database]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.1.h.iii [Within 2,000' of DEC Remediation Site]	No
E.2.g [Unique Geologic Features]	No
E.2.h.i [Surface Water Features]	No
E.2.h.ii [Surface Water Features]	Yes
E.2.h.iii [Surface Water Features]	Yes - Digital mapping information on local and federal wetlands and waterbodies is known to be incomplete. Refer to EAF Workbook.
E.2.h.v [Impaired Water Bodies]	No
E.2.i. [Floodway]	No
E.2.j. [100 Year Floodplain]	No
E.2.k. [500 Year Floodplain]	Yes
E.2.l. [Aquifers]	No
E.2.n. [Natural Communities]	No
E.2.o. [Endangered or Threatened Species]	No
E.2.p. [Rare Plants or Animals]	No

E.3.a. [Agricultural District]	No
E.3.c. [National Natural Landmark]	No
E.3.d [Critical Environmental Area]	No
E.3.e. [National or State Register of Historic Places or State Eligible Sites]	Digital mapping data are not available or are incomplete. Refer to EAF Workbook.
E.3.f. [Archeological Sites]	Yes
E.3.i. [Designated River Corridor]	No

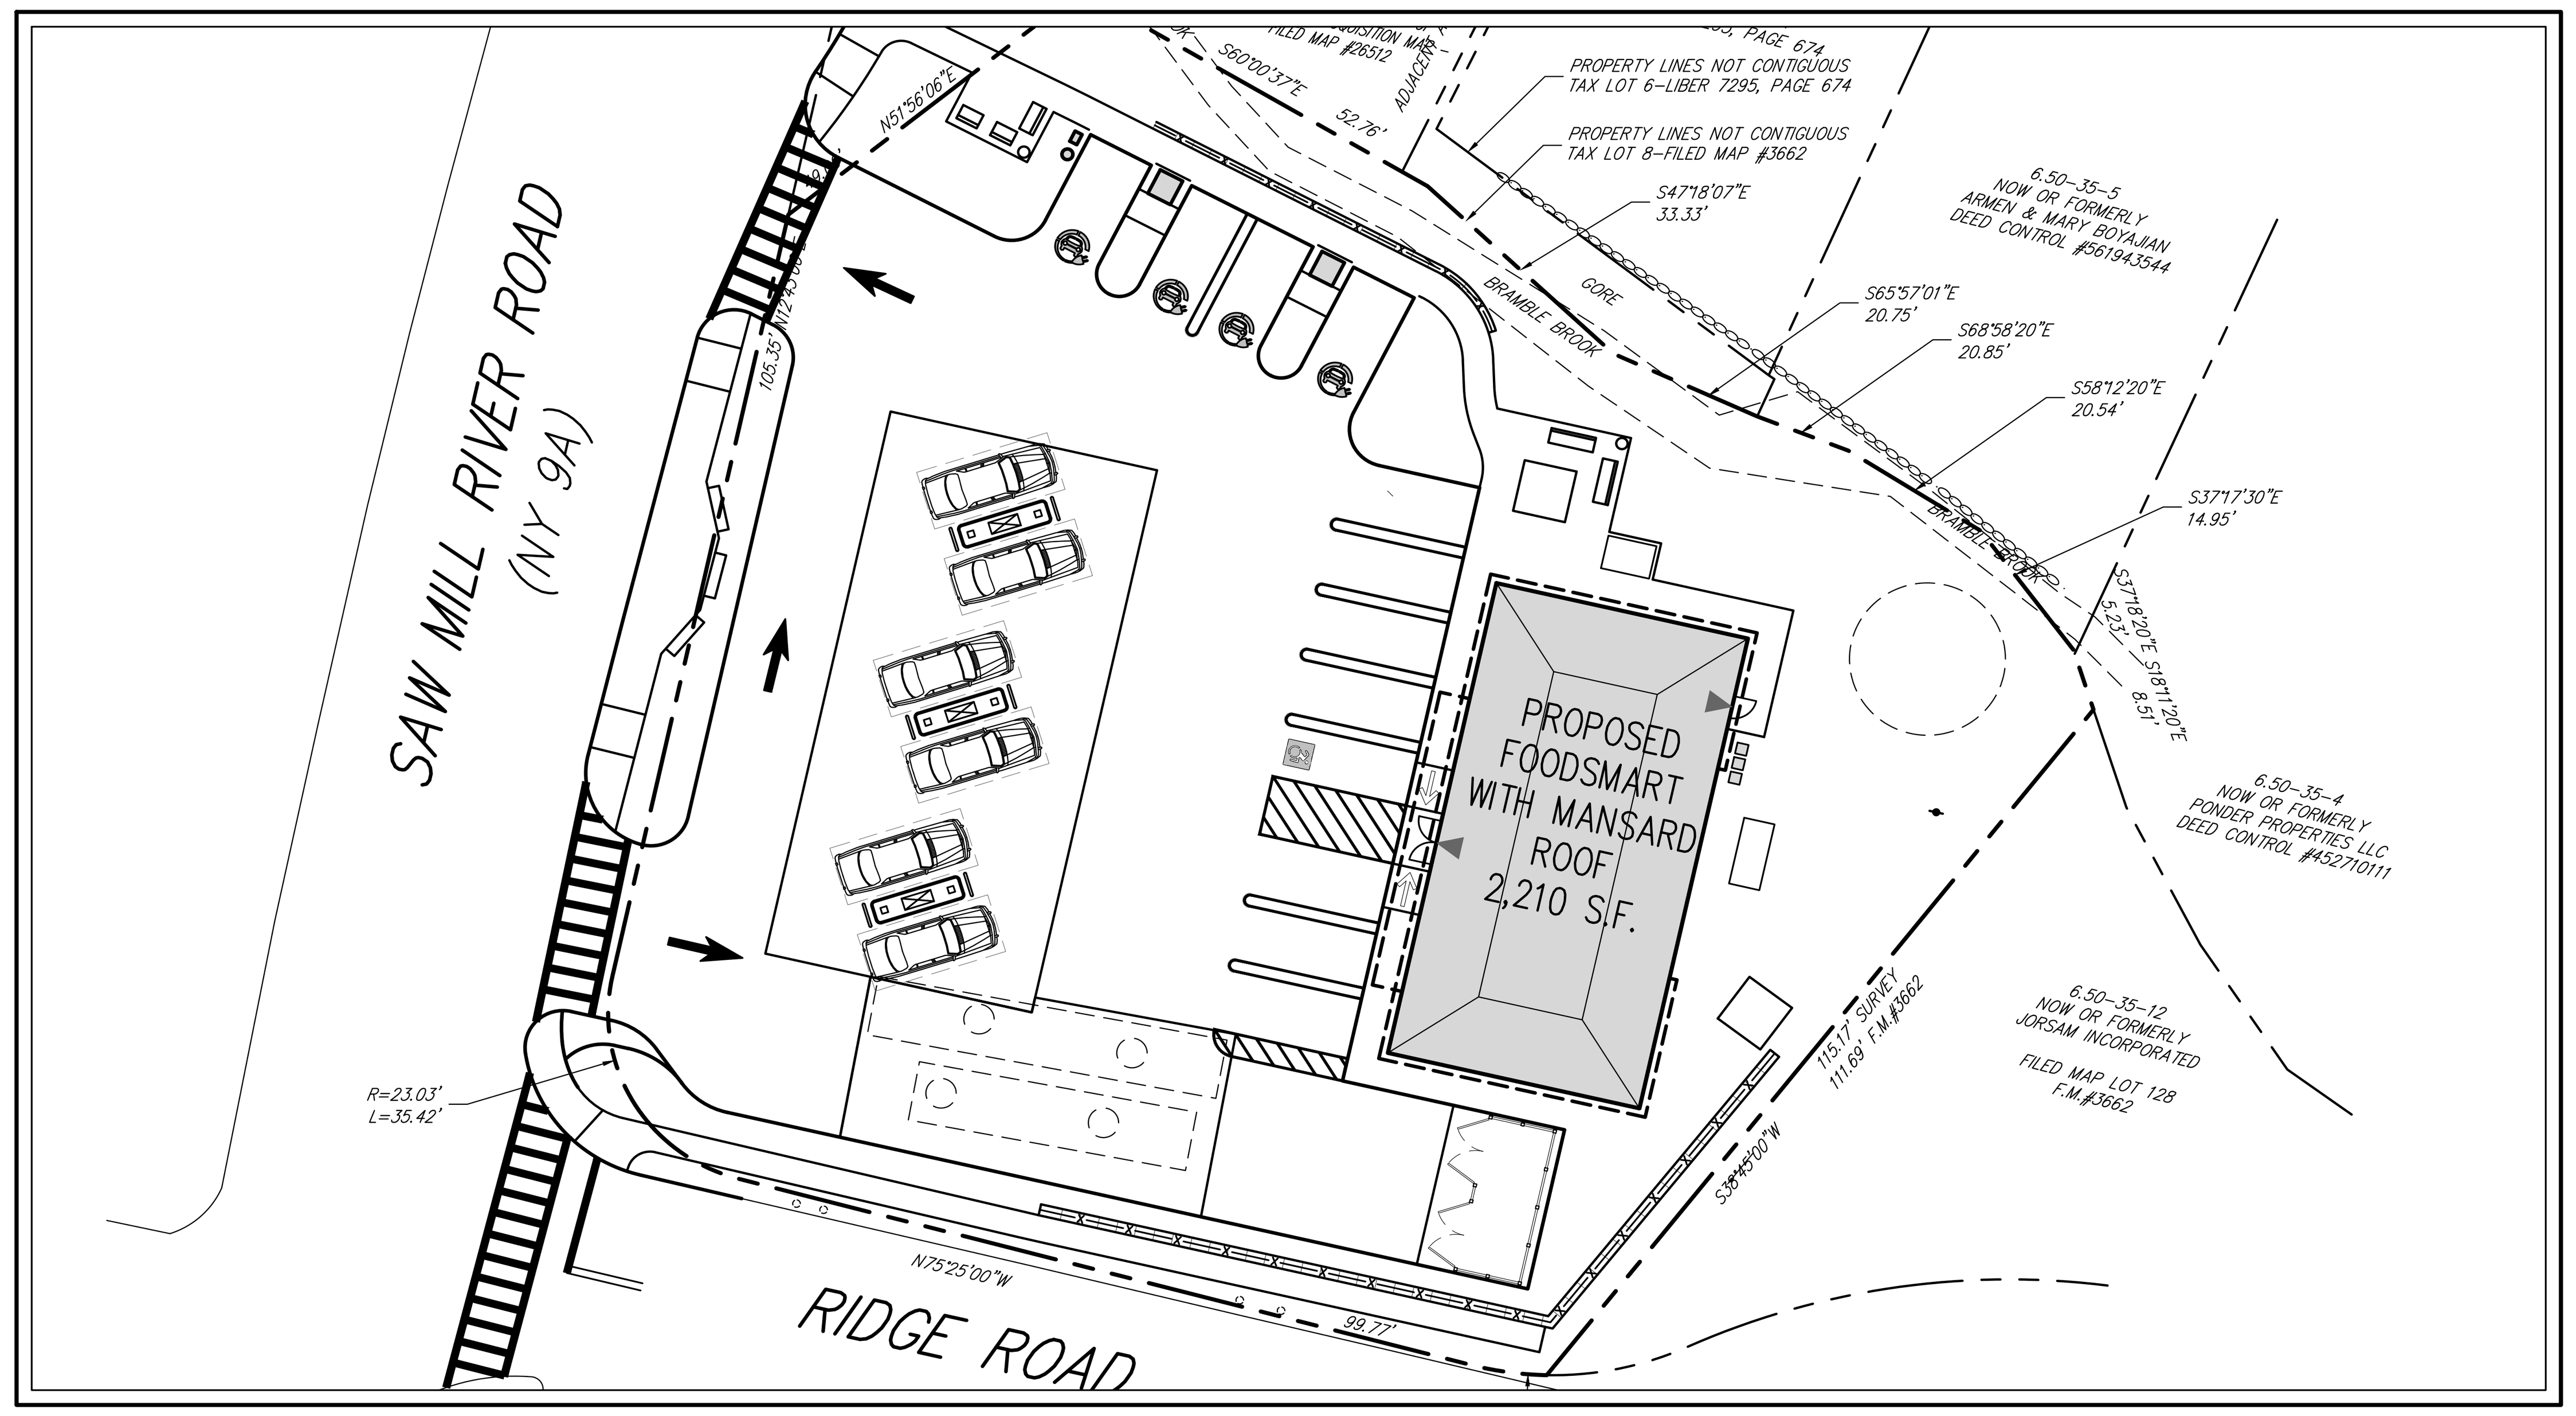
JMC Drawing List:



AREA MAP
SCALE: 1" = 20'

TABLE OF LAND USE

SECTION 6.50, BLOCK 35, LOT 10
ZONE "B-1" – "GENERAL BUSINESS DISTRICT"
PROPOSED USE: GAS STATION WITH CONVENIENCE STORE
FIRE DISTRICT: ARDSLEY FIRE DISTRICT
SEWER DISTRICT: SAW MILL SEWER DISTRICT

DESCRIPTION		REQUIRED	EXISTING	PROPOSED
LOT AREA	(SQUARE FEET)	5,000 MIN.	22,732(5)	22,732(5)
LOT COVERAGE BY BUILDING	(PERCENT)	65 MAX.	10.3	21.6
BUILDING HEIGHT	(FEET / STORIES)	45/4 MAX.	–/–	25.17/1 (4)
YARDS				
FRONT BUILDING SETBACK	(FEET)	10 MIN.	±39.6	±36.3' (7)
SIDE/REAR BUILDING SETBACK	(FEET)	0(3)	±44.2	±13.0
SIDE/REAR BUILDING SETBACK	(FEET)	0(3)	±30.7	±28.4'
PARKING				
TOTAL SPACES		12	–	12 (2)(6)
STANDARD SPACES		11	–	11
ACCESSIBLE SPACES		1	–	1

TABLE OF LAND USE NOTES:

1. LOT COVERAGE AREA INCLUDES 2,210 S.F. PROPOSED CONVENIENCE STORE AND 2,700 S.F. PROPOSED GASOLINE PUMP CANOPY.
2. THE 6 FUELING SPACES LOCATED UNDER THE PROPOSED CANOPY ARE NOT INCLUDED AS PART OF THE 12 SPACES REQUIRED/ PROVIDED.
3. VILLAGE CODE SECTION 200–70 STATES THAT NO SIDE OR REAR YARD SHALL BE REQUIRED; HOWEVER, IF EITHER IS PROVIDED, ITS LEAST DIMENSION SHALL NOT BE LESS THAN SIX FEET.
4. THE MAXIMUM ROOF HEIGHT WAS TAKEN FROM FINISHED SIDEWALK TO TOP OF MANSARD PARAPET.
5. THE LOT AREA WAS CALCULATED BY THE SURVEYED LOT AREA OF 23,224 LESS 75% OF THE WATERCOURSE AREA, 492 S.F. = 22,732.
6. THE BREAKDOWN OF REQUIRED/ PROVIDED SPACES IS: 1 ACCESSIBLE SPACE, 4 EV CHARGING SPACES & 7 STANDARD SPACES.
7. MEASURED FROM RIDGE ROAD.

GENERAL CONSTRUCTION NOTES APPLY TO ALL WORK HEREIN:

1. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL CALL 811 "DIG SAFELY" (1–800–962–7962) TO HAVE UNDERGROUND UTILITIES LOCATED. EXPLORATORY EXCAVATIONS SHALL COMPLY WITH CODE 753 REQUIREMENTS. NO WORK SHALL COMMENCE UNTIL ALL THE OPERATORS HAVE NOTIFIED THE CONTRACTOR THAT THEIR UTILITIES HAVE BEEN LOCATED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PRESERVATION OF ALL PUBLIC AND PRIVATE UNDERGROUND AND SURFACE UTILITIES AND STRUCTURES AT OR ADJACENT TO THE SITE OF CONSTRUCTION, INSOFAR AS THEY MAY BE ENDANGERED BY THE CONTRACTOR'S OPERATIONS. THIS SHALL HOLD TRUE WHETHER OR NOT THEY ARE SHOWN ON THE CONTRACT DRAWINGS. IF THEY ARE SHOWN ON THE DRAWINGS, THEIR LOCATIONS ARE NOT GUARANTEED EVEN THOUGH THE INFORMATION WAS OBTAINED FROM THE BEST AVAILABLE SOURCES, AND IN ANY EVENT, OTHER UTILITIES ON THESE PLANS MAY BE ENCOUNTERED IN THE FIELD. THE CONTRACTOR SHALL, AT HIS OWN EXPENSE, IMMEDIATELY REPAIR OR REPLACE ANY STRUCTURES OR UTILITIES THAT HE DAMAGES, AND SHALL CONSTANTLY PROCEED WITH CAUTION TO PREVENT UNDUE INTERRUPTION OF UTILITY SERVICE.
2. CONTRACTOR SHALL HAND DIG TEST PITS TO VERIFY THE LOCATION OF ALL EXISTING UNDERGROUND UTILITIES PRIOR TO THE START OF CONSTRUCTION. CONTRACTOR SHALL VERIFY EXISTING UTILITIES DEPTHS AND ADVISE OF ANY CONFLICTS WITH PROPOSED UTILITIES. IF CONFLICTS ARE PRESENT. THE OWNER'S FIELD REPRESENTATIVE, JMC, PLLC AND THE APPLICABLE MUNICIPALITY OR AGENCY SHALL BE NOTIFIED IN WRITING. THE EXISTING/PROPOSED UTILITIES RELOCATION SHALL BE DESIGNED BY JMC, PLLC.
3. CONTRACTOR IS RESPONSIBLE FOR OBTAINING ANY AND ALL LOCAL PERMITS REQUIRED.
4. ALL WORK SHALL BE DONE IN STRICT COMPLIANCE WITH ALL APPLICABLE NATIONAL, STATE, AND LOCAL CODES, STANDARDS, ORDINANCES, RULES, AND REGULATIONS. ALL CONSTRUCTION WORK SHALL BE PERFORMED IN ACCORDANCE WITH ALL SAFETY CODES. APPLICABLE SAFETY CODES MEAN THE LATEST EDITION INCLUDING ANY AND ALL AMENDMENTS, REVISIONS, AND ADDITIONS THERETO, TO THE FEDERAL DEPARTMENT OF LABOR, OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION'S OCCUPATIONAL SAFETY AND HEALTH STANDARDS (OSHA); AND APPLICABLE SAFETY, HEALTH REGULATIONS AND BUILDING CODES FOR CONSTRUCTION IN THE STATE OF NEW YORK. THE CONTRACTOR SHALL BE RESPONSIBLE FOR GUARDING AND PROTECTING ALL OPEN EXCAVATIONS IN ACCORDANCE WITH THE PROVISION OF SECTION 107–05 (SAFETY AND HEALTH REQUIREMENTS) OF THE NYSDOT STANDARD SPECIFICATIONS. IF THE CONTRACTOR PERFORMS ANY HAZARDOUS CONSTRUCTION PRACTICES, ALL OPERATIONS IN THE AFFECTED AREA SHALL BE DISCONTINUED AND IMMEDIATE ACTION SHALL BE TAKEN TO CORRECT THE SITUATION TO THE SATISFACTION OF THE APPROVAL AUTHORITY HAVING JURISDICTION.
5. CONTRACTOR SHALL MAINTAIN ACCESS TO ALL PROPERTIES AFFECTED BY THE SCOPE OF WORK SHOWN HEREON AT ALL TIMES TO THE SATISFACTION OF THE OWNERS REPRESENTATIVE. RAMPING CONSTRUCTION TO PROVIDE ACCESS MAY BE CONSTRUCTED WITH SUBBASE MATERIAL EXCEPT THAT TEMPORARY ASPHALT CONCRETE SHALL BE PLACED AS DIRECTED BY THE ENGINEER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING SAFE PEDESTRIAN ACCESS AT ALL TIMES.
6. CONTRACTOR SHALL MAINTAIN THE INTEGRITY OF EXISTING PAVEMENT TO REMAIN.

NOTES:

1. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE BEEN TAKEN FROM SURVEY TITLED, "TOPOGRAPHY OF PROPERTY," PREPARED BY THOMAS C. MERRITTS LAND SURVEYORS, P.C., LAST REVISED 11/17/2020.
2. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE BEEN SUPPLEMENTED UTILIZING NEW YORK STATE GIS CLEARINGHOUSE ORTHOIMAGERY. THIS INFORMATION SHOULD BE CONSIDERED APPROXIMATE AND USED FOR PLANNING PURPOSES ONLY.
3. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE ALSO BEEN SUPPLEMENTED WITH INFORMATION FROM "SITE LOCATION PLAN" PREPARED BY DRE ENVIRONMENTAL, INC., DATED 11/01/2016.
4. UNLESS OTHERWISE SPECIFIED, PIPE FOR SANITARY SEWER GRAVITY LINES SHALL BE POLYVINYL CHLORIDE PIPE (PVCP), SDR-35, WITH PUSH-ON JOINTS IN ACCORDANCE WITH ASTM D-3034 AND D-3212.
5. UNLESS OTHERWISE SPECIFIED, PIPE FOR WATER LINES SHALL BE DOUBLE CEMENT-LINED DUCTILE IRON PIPE (DIP), CLASS 54, WITH PUSH-ON JOINTS AND FIELD-LOK GASKETS IN ACCORDANCE WITH AWWA C-150, C-151, C-104 AND C-111.
6. ALL COPPER SERVICE LINES SHALL BE SEAMLESS TYPE "K" COPPER IN ACCORDANCE WITH ASTM-88 WITH COMPRESSION OR FLARED JOINTS.
7. ELECTRIC, TELEPHONE, AND CABLE TELEVISION LINES SHALL BE INSTALLED UNDERGROUND IN CONDUIT IN ACCORDANCE WITH THE REQUIREMENTS OF THE UTILITY COMPANY HAVING JURISDICTION.
8. CONTRACTOR SHALL MAINTAIN A MINIMUM OF 4 FEET OF COVER OVER ALL WATER MAINS.
9. CONTRACTOR SHALL MAINTAIN MINIMUM HORIZONTAL AND VERTICAL CROSSING DISTANCES PER THE WESTCHESTER COUNTY DEPARTMENT OF HEALTH REQUIREMENTS. IF MINIMUM DISTANCES CANNOT BE MAINTAINED, THE CONTRACTOR SHALL USE CONTROLLED LOW STRENGTH MATERIAL FOR BACKFILL AROUND CROSSINGS.
10. ALL UTILITY CONNECTIONS AT BUILDING SHALL BE COORDINATED WITH THE PLUMBING, MECHANICAL AND ELECTRICAL BUILDING CONTRACTORS.
11. SEE DRAWINGS FROM OTHERS FOR DESIGN OF UTILITY CONNECTIONS, CONDUITS, WIRING, ETC. FOR SITE LIGHTING PYLON SIGN, OTHER ILLUMINATED SIGNAGE, AIR/VACUUM MACHINE, PROPANE FUELING, AND GENERATOR CONNECTIONS.
12. IT IS THE CONTRACTOR'S RESPONSIBILITY TO COORDINATE ALL UTILITY CONNECTIONS/EXTENSIONS/RELOCATIONS WITH APPROPRIATE UTILITY COMPANIES AS REQUIRED. INSTALLATION OF ALL UTILITIES SHALL CONFORM TO UTILITY COMPANY REQUIREMENTS.
13. ALL FUELING RELATED FACILITIES/EQUIPMENT TO BE DESIGNED AND PERMITTED BY OTHERS. CONTRACTOR SHALL BE RESPONSIBLE TO INSPECT ALL PETROLEUM DISPENSING AND STORAGE SYSTEMS TO ENSURE THAT CONSTRUCTION IS IN ACCORDANCE WITH ALL FEDERAL, STATE AND LOCAL LAWS, CODES, RULES AND ORDINANCES.

SEQUENCE OF CONSTRUCTION

CONSTRUCTION SHALL BE SEQUENCED IN SUCH A MANNER THAT ANY AREA WHICH IS DISTURBED SHALL FIRST BE PROTECTED WITH SEDIMENT EROSION CONTROLS AS INDICATED ON THIS PLAN. PARTICULAR REQUIREMENTS ARE GIVEN AS FOLLOWS:

1. DEMOLITION OF EXISTING BUILDINGS AS REQUIRED.
2. INSTALLATION OF SEDIMENT AND EROSION CONTROL MEASURES AS INDICATED ON THIS PLAN.
3. CLEAR UNDEVELOPED PORTION OF PROPERTY WHICH IS TO BE DEVELOPED.
4. STRIP AND STOCKPILE TOPSOIL.
5. BEGIN BUILDING AND PARKING LOT CONSTRUCTION, ROUGH GRADING.
6. INSTALL STORM DRAIN SYSTEM COMPLETE (IMMEDIATELY INSTALL HAYBALE FILTERS ON ALL INLETS).
7. INSTALL PUBLIC UTILITIES (GAS, ELECTRIC AND TELEPHONE) AS REQUIRED.
8. INSTALL CONCRETE AND ASPHALT CONCRETE PAVEMENT COMPLETE.
9. FINISH GRADING, REDISTRIBUTE TOPSOIL AND ESTABLISH VEGETATION AND/OR LANDSCAPING.
10. CLEAN PAVEMENTS AND STORM DRAIN SYSTEM OF ALL ACCUMULATED SEDIMENT IN CONJUNCTION WITH THE REMOVAL OF ALL TEMPORARY SEDIMENT AND EROSION CONTROL DEVICES.
11. COMPLETE SITE AND BUILDING CONSTRUCTION.

LEGEND

- PROPOSED INLET PROTECTION
- PROPOSED CONSTRUCTION FENCE
- PROPOSED SILT FENCE
- PROPOSED LIMIT OF DISTURBANCE
- PROPOSED STABILIZED CONSTRUCTION ENTRANCE
- PROPOSED EQUIPMENT STAGING AREA
- PROPOSED STOCKPILE AREA

NOTES:

1. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE BEEN TAKEN FROM SURVEY TITLED, "TOPOGRAPHY OF PROPERTY," PREPARED BY THOMAS C. MERRITTS LAND SURVEYORS, P.C., LAST REVISED 11/17/2020.
2. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE BEEN SUPPLEMENTED UTILIZING NEW YORK STATE GIS CLEARINGHOUSE ORTHOIMAGERY. THIS INFORMATION SHOULD BE CONSIDERED APPROXIMATE AND USED FOR PLANNING PURPOSES ONLY.
3. EXISTING CONDITIONS DEPICTED ON THIS PLAN HAVE ALSO BEEN SUPPLEMENTED WITH INFORMATION FROM "SITE LOCATION PLAN" PREPARED BY DRE ENVIRONMENTAL, INC., DATED 11/01/2016.
4. THIS PLAN IS FOR TEMPORARY EROSION AND SEDIMENT CONTROL INFORMATION ONLY.
5. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED AND MAINTAINED PER NEW YORK STATE STANDARDS AND SPECIFICATIONS FOR EROSION AND SEDIMENT CONTROL, DATED NOVEMBER 2016.
6. PRIOR TO BEGINNING ANY CLEARING, GRUBBING OR EXCAVATION, ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED IN ACCORDANCE WITH ALL THE PLANS AND SPECIFICATIONS. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE MAINTAINED UNTIL THE SITE IS STABILIZED. FINAL STABILIZATION OF LANDSCAPED AREAS SHALL BE IN ACCORDANCE WITH THE LANDSCAPE PLAN.
7. THE CONTRACTOR SHALL INSPECT AND MAINTAIN ON-SITE EROSION AND SEDIMENT CONTROL MEASURES ON A DAILY BASIS. ALL COLLECTED SEDIMENT WITHIN SEDIMENT BARRIERS SHALL BE REMOVED PERIODICALLY AS REQUIRED TO MAINTAIN THE FUNCTION OF THE SEDIMENT BARRIERS. ALL SEDIMENT COLLECTED SHALL BE RESPREAD ON-SITE WITHIN STABILIZED AREAS AS DIRECTED BY THE OWNERS REPRESENTATIVE.
8. THE CONTRACTOR SHALL INSPECT DOWNSTREAM CONDITIONS FOR EVIDENCE OF SEDIMENTATION ON A WEEKLY BASIS, AFTER EACH RAINSTORM, AND AS MAY BE REQUIRED OR DIRECTED BY ALL APPLICABLE APPROVALS AND PERMITS. THE CONTRACTOR SHALL IMMEDIATELY PROVIDE A WRITTEN REPORT ON FINDINGS OF SEDIMENT IN DOWNSTREAM AREAS TO ALL AUTHORITIES HAVING JURISDICTION AND MAKE REPAIRS AS REQUIRED OR DIRECTED.
9. ADDITIONAL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED BY THE CONTRACTOR AS REQUIRED/WARRANTED BY FIELD CONDITIONS AND AS DIRECTED BY THE OWNERS REPRESENTATIVE, JMC, AND/OR ANY AUTHORITY HAVING JURISDICTION.
10. STOCKPILING OF CONSTRUCTION MATERIAL SHALL BE PLACED ON-SITE IN THE AREA DESIGNATED ON THIS PLAN OR AS APPROVED BY THE OWNERS REPRESENTATIVE. STOCKPILED EXCAVATED MATERIAL SHALL HAVE TWO ROWS OF SILT FENCE LOCATED AROUND ITS PERIMETER. ALL STOCKPILED MATERIAL SHALL BE MAINTAINED IN AN ORDERLY MANNER SO AS NOT TO IMPEDE ON PEDESTRIAN AND/OR VEHICULAR TRAFFIC CIRCULATION ROUTES.
11. DUST SHALL BE CONTROLLED BY SPRINKLING OR OTHER APPROVED METHODS AS NECESSARY, OR AS DIRECTED BY THE OWNERS REPRESENTATIVE.
12. ALL STORMWATER MANAGEMENT PRACTICES SHALL REMAIN UNDISTURBED AND BE PROTECTED FROM HEAVY MACHINERY TRAFFIC DURING CONSTRUCTION. HOWEVER DURING CONSTRUCTION OF THE PRACTICE THE CONTRACTOR SHALL MINIMIZE AND AVOID HEAVY MACHINERY TRAFFIC TO THE MAXIMUM EXTENT PRACTICABLE. THERE SHALL BE NO STORAGE OF MATERIALS WITHIN AREAS TO BE USED FOR STORMWATER MANAGEMENT PRACTICES. THE CONTRACTOR SHALL INSTALL CONSTRUCTION FENCE AROUND THE PRACTICE TO DISCOURAGE VEHICLE TRAFFIC.
13. ANY IMPORTED TOPSOIL SHALL COMPLY WITH ALL FEDERAL, STATE, AND LOCAL REQUIREMENTS FOR QUALITY AND USE.
14. OFF-SITE DISPOSAL OF EXCESS CUT SHALL BE IN ACCORDANCE WITH ALL FEDERAL, STATE, AND LOCAL REQUIREMENTS.
15. SITE STABILIZATION (80% UNIFORM DENSITY OF PERMANENT VEGETATION OR PERMANENT MULCH/STONE) MUST BE ACHIEVED PRIOR TO REMOVING TEMPORARY EROSION CONTROL MEASURES.
16. ALL SEEDED AREAS SHALL BE FERTILIZED, RESEEDED, AND MULCHED AS NECESSARY TO MAINTAIN VIGOROUS, DENSE VEGETATIVE COVER.
17. TEMPORARY SEED MIXTURES SHALL NOT BE PLACED ON AREAS WHERE FINAL GRADE HAS BEEN ESTABLISHED AND TOPSOIL HAS BEEN PLACED UNLESS OTHERWISE DIRECTED BY THE PROJECT LANDSCAPE ARCHITECT.
18. ALL EXPOSED SLOPES AND GRADED/DISTURBED AREAS, THAT WILL NOT BE FURTHER DISTURBED WITHIN 14 CALENDAR DAYS (7 DAYS FOR CONSTRUCTION SITES THAT EITHER DIRECTLY DISCHARGE TO ONE OF THE 303(d) SEGMENTS LISTED IN APPENDIX E OF THE GENERAL PERMIT OR ARE LOCATED WITHIN ONE OF THE WATERSHEDS LISTED IN APPENDIX C OF THE GENERAL PERMIT), SHALL BE TEMPORARILY SEEDED WITHIN 24 HOURS OF DISTURBANCE, IN ACCORDANCE WITH THE NEW YORK STATE DEPARTMENT OF ENVIRONMENTAL CONSERVATION (NYSDEC) "EROSION AND SEDIMENT CONTROL GUIDELINES" AND THE ANSI A300 "BEST MANAGEMENT PRACTICES FOR TREE AND SHRUB PLANTING, TRANSPLANTING, MAINTENANCE AND CARE," PREPARED BY THE INTERNATIONAL SOCIETY OF ARBORICULTURE (ISA), LATEST EDITIONS, AS FOLLOWS:
    - A. SEED MIXTURE AND RATE OF APPLICATION:
        - A.1. IN SPRING, SUMMER OR EARLY FALL, SEED THE AREA WITH RYEGRASS (ANNUAL OR PERENNIAL) AT 30 POUNDS PER ACRES (APPROXIMATELY 0.7 POUNDS/1000 SQUARE FEET OR USE 1 POUND/1000 SQUARE FEET).
        - A.2. IN LATE FALL OR EARLY WINTER, SEED THE AREA WITH CERTIFIED "ARDOSTOOK" WINTER RYE (CEREAL RYE) AT 100 POUNDS PER ACRE (2.5 POUNDS/1000 SQUARE FEET).
    - B. APPLICATION SHALL BE UNIFORM BY MECHANICAL OR HYDROSEED METHODS.
    - C. MULCH ALL SEEDED AREAS WITH STRAW AT A RATE OF 2 TONS PER ACRE (90 POUNDS PER 1,000 SQUARE FEET) SUCH THAT THE MULCH FORMS A CONTINUOUS BLANKET.

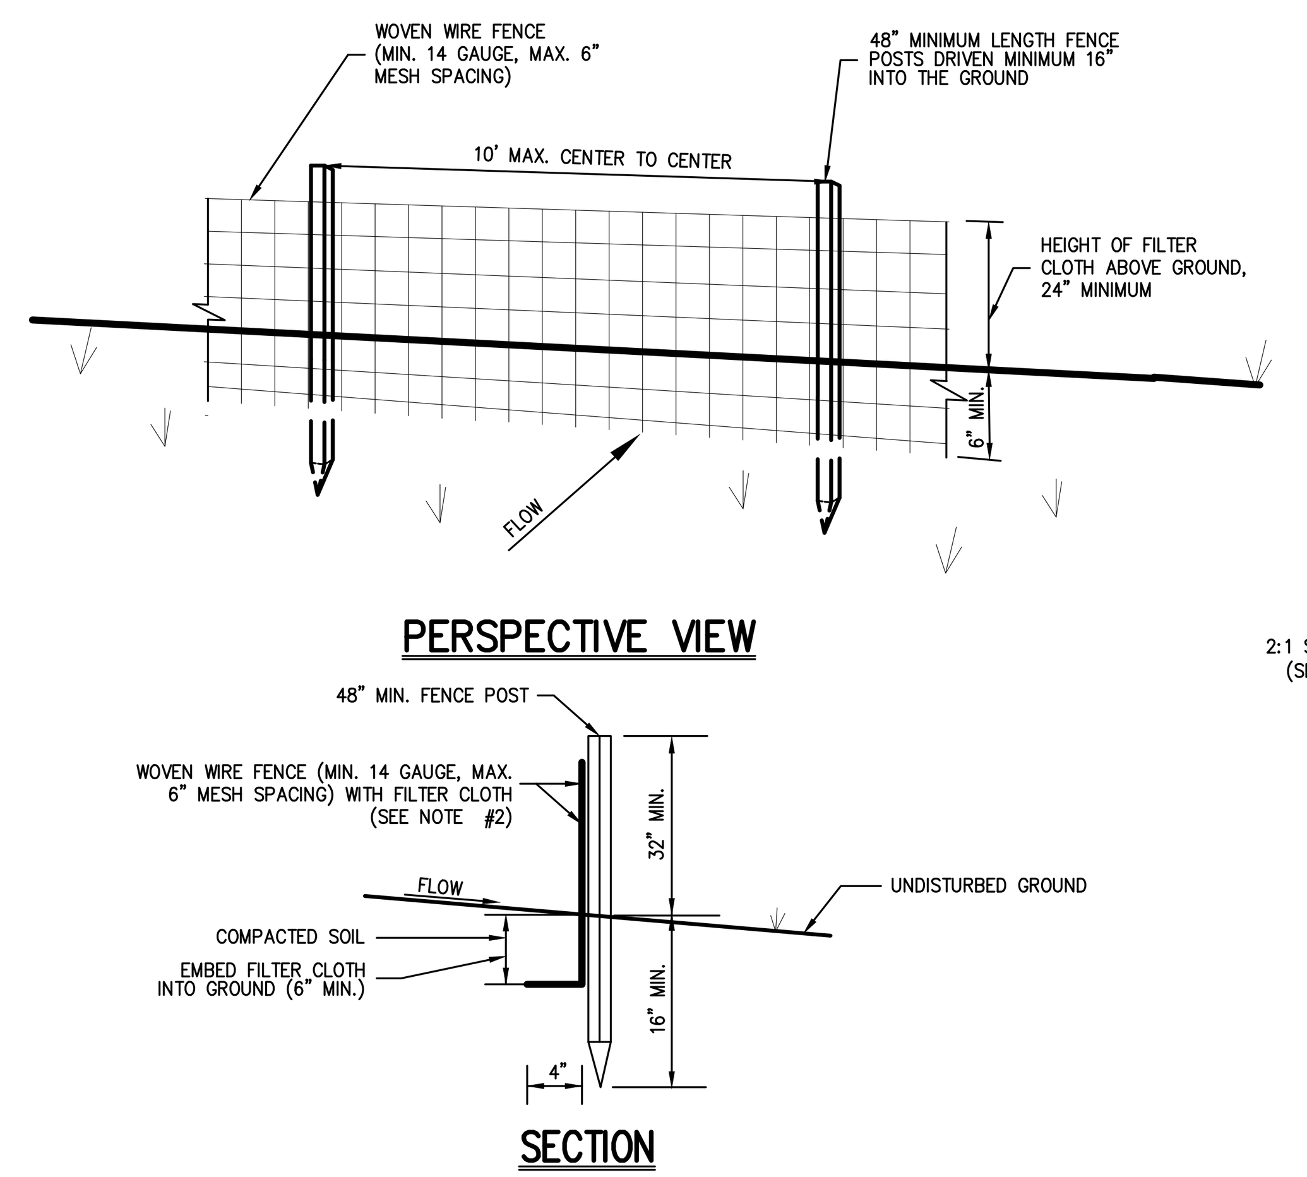
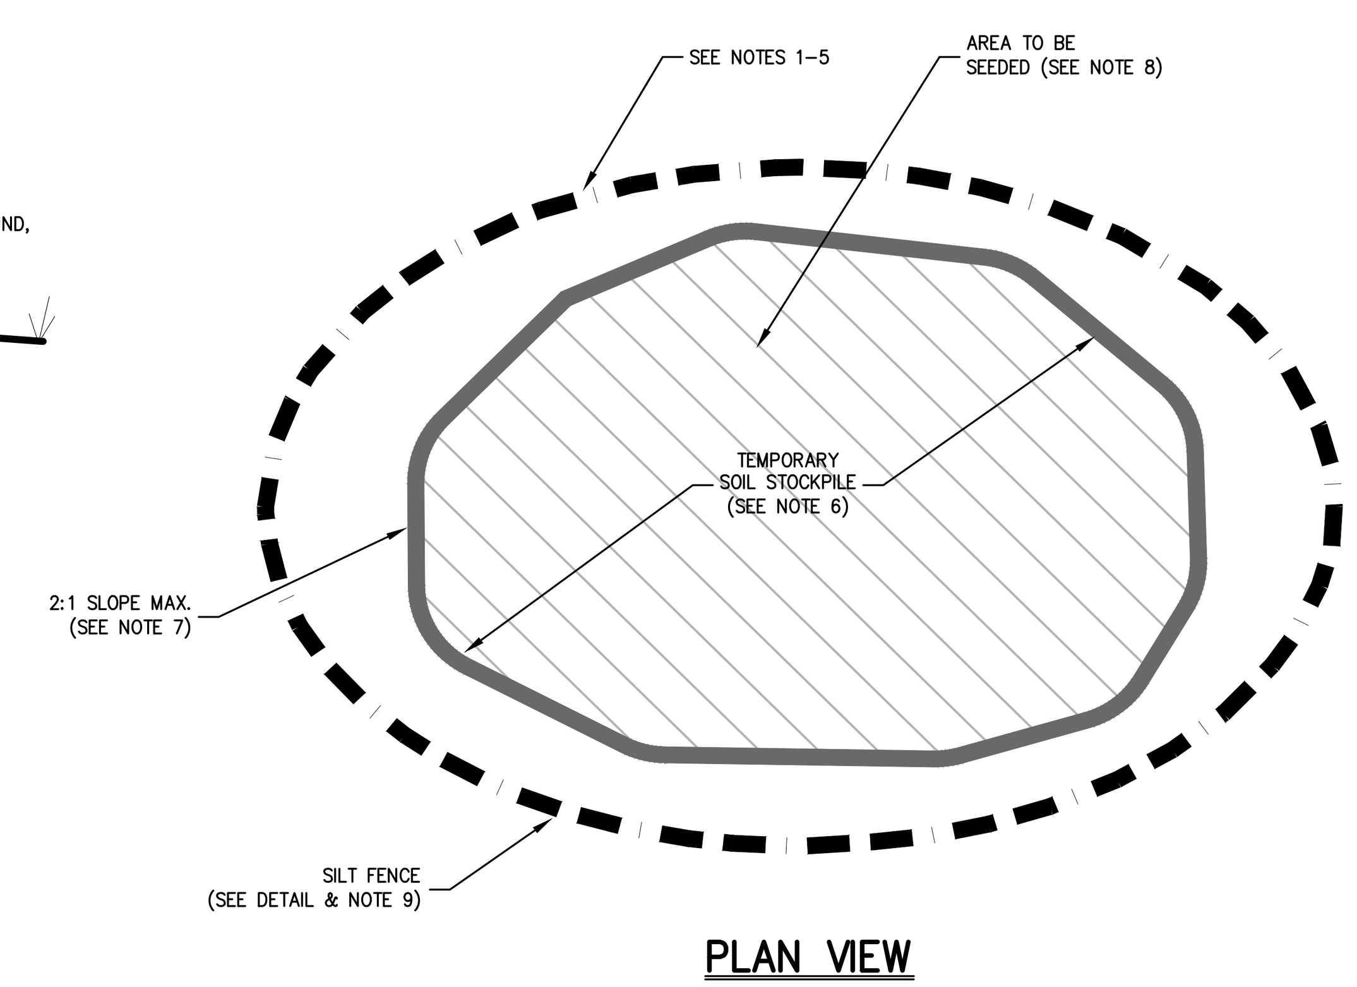
LIGHTING PLAN

GAS STATION / CONVENIENCE MARKET
657 SAW MILL RIVER ROAD
VILLAGE OF ARDSLEY, NEW YORK

Drawn: KRM	Approved: RJP
Scale: 1" = 10'	
Date: 05/26/2020	
Project No: 18175	
18175-SITE / C-600-LIGHT / LIGHT.scr	
Drawing No: C-600	

NOT FOR CONSTRUCTION

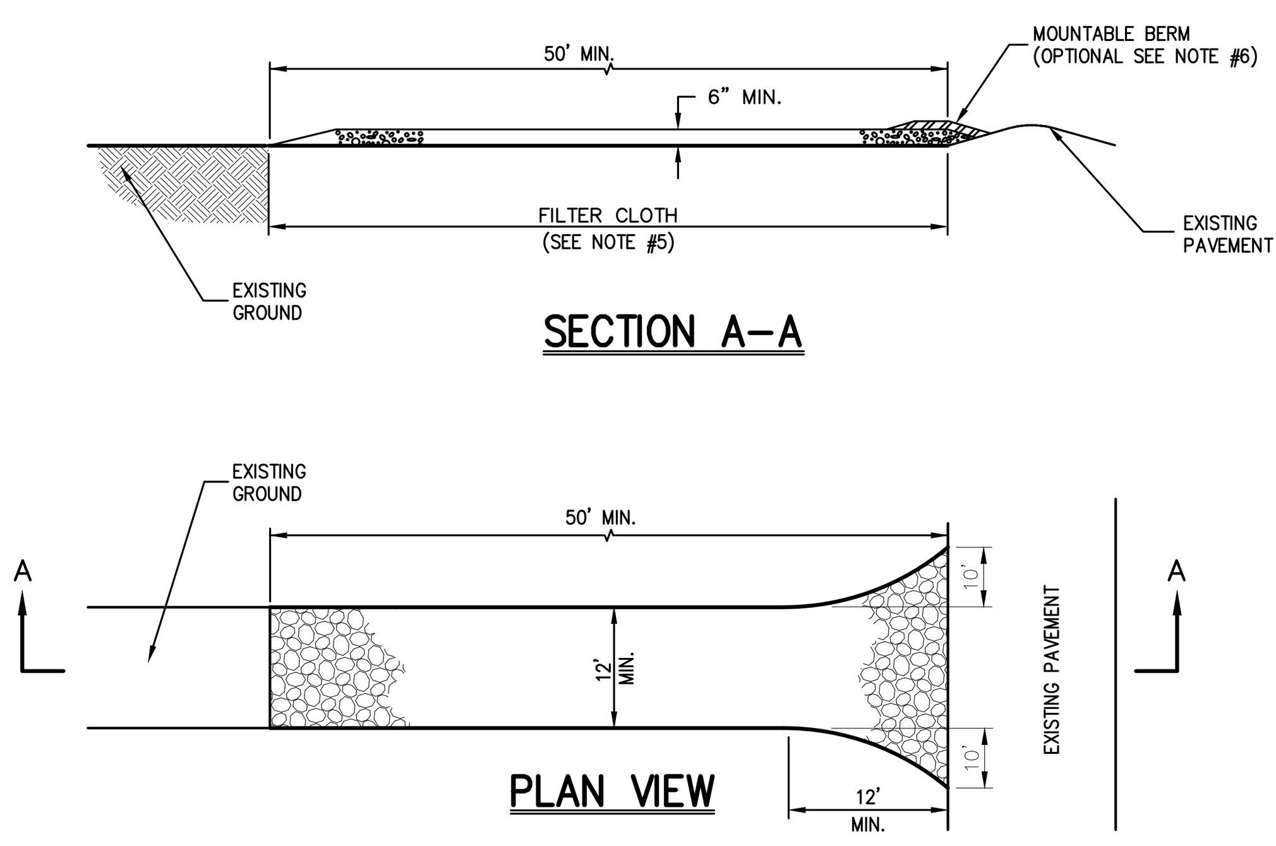




NOTES:

1. WOVEN WIRE FENCE SHALL BE FASTENED SECURELY TO FENCE POSTS WITH WIRE TIES OR STAPLES. POSTS SHALL BE STEEL, EITHER T OR U TYPE OR HARDWOOD.
2. FILTER CLOTH SHALL BE FASTENED SECURELY TO WOVEN WIRE FENCE WITH TIES SPACED EVERY 24" AT TOP AND MID SECTION. FENCE SHALL BE WOVEN WIRE, 6" MAXIMUM MESH OPENING.
3. WHEN TWO SECTIONS OF FILTER CLOTH ADJOIN EACH OTHER, THEY SHALL BE OVERLAPPED BY SIX INCHES AND FOLDED. FILTER CLOTH SHALL BE EITHER FILTER X, MIRAFI 100X, STABLINKA T140N, OR APPROVED EQUAL.
4. PREFABRICATED UNITS SHALL BE GEOFAB, ENVIROFENCE, OR APPROVED EQUAL.
5. MAINTENANCE SHALL BE PERFORMED AS NEEDED AND MATERIAL REMOVED AND REPLACED WHEN "BULGES" DEVELOP IN THE SILT FENCE.
6. THE AREA CHOSEN FOR ALL TEMPORARY SOIL STOCKPILES SHALL BE DRY AND STABLE.
7. ALL STOCKPILED SOIL SHALL NOT CONTAIN SLOPES GREATER THAN 2:1.
8. UPON COMPLETION OF SOIL STOCKPILING, EACH PILE SHALL BE SEEDED WITHIN 24 HOURS. PERENNIAL OR ANNUAL RYEGRASS SHALL BE PLANTED DURING SPRING, SUMMER OR EARLY FALL. WINTER RYE (CEREAL RYE) SHALL BE PLANTED DURING LATE FALL OR EARLY WINTER.
9. ALL STOCKPILES SHALL BE PROTECTED WITH SILT FENCING INSTALLED AROUND THE PERIMETER.

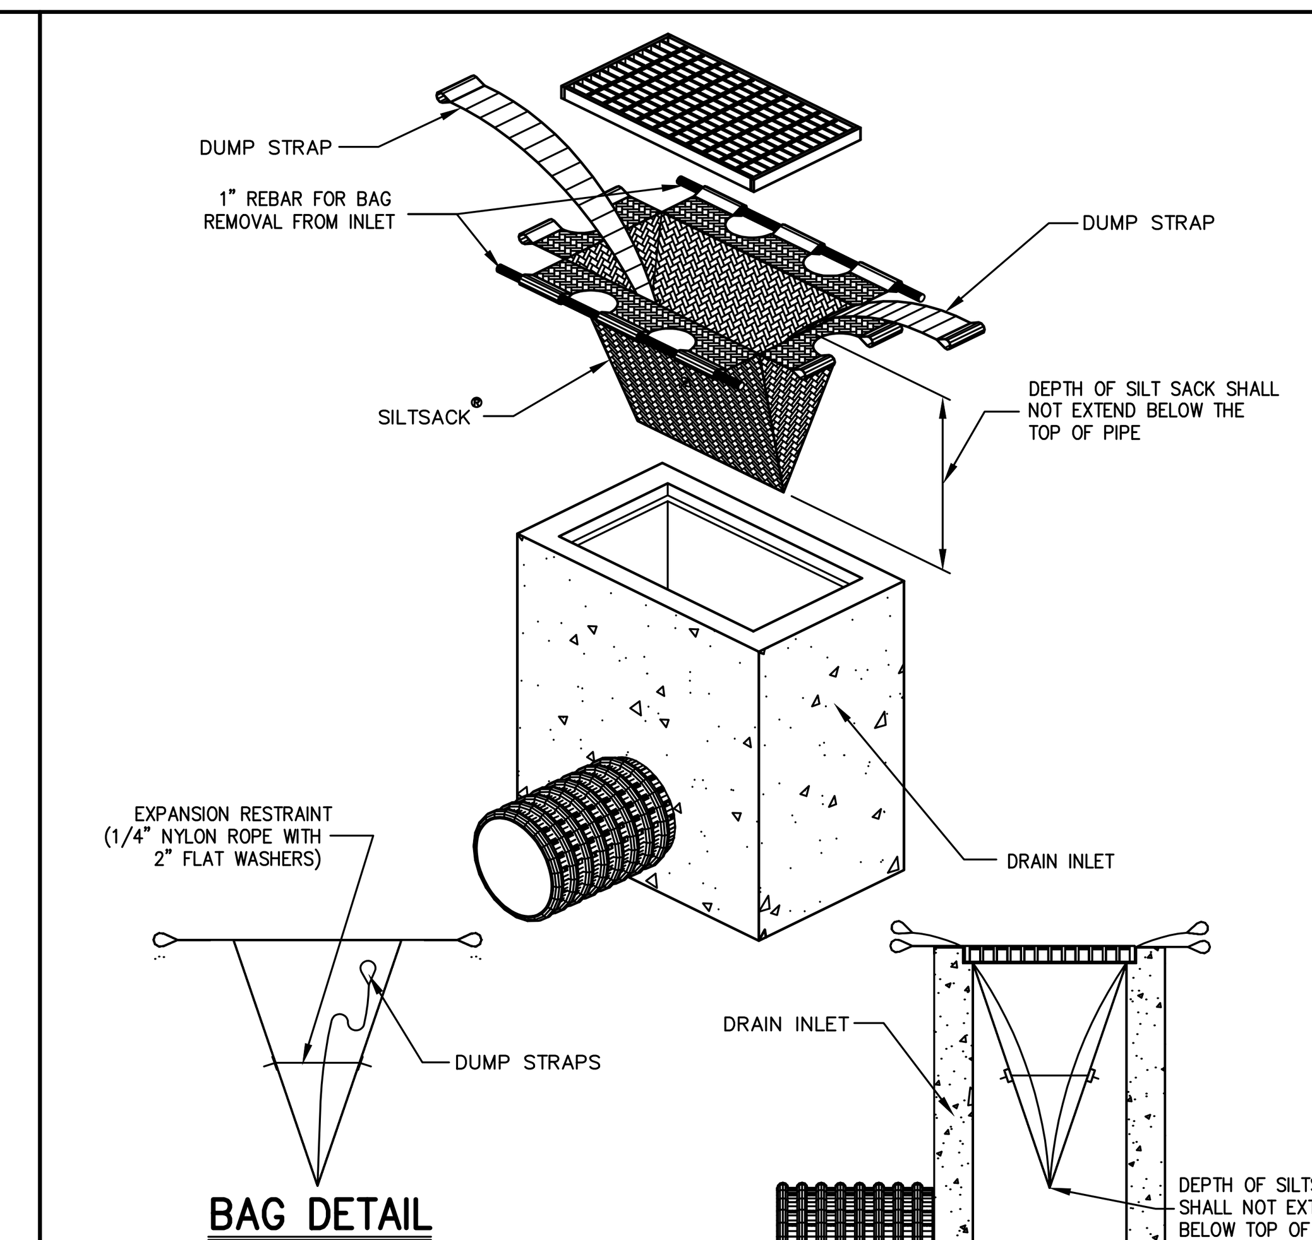
TEMPORARY SOIL STOCKPILE WITH SILT FENCE — 1



NOTES

1. STONE SIZE – USE 1" TO 4" STONE, OR RECLAIMED OR RECYCLED CONCRETE EQUIVALENT.
2. LENGTH – AS REQUIRED, BUT NOT LESS THAN 50 FEET.
3. THICKNESS – NOT LESS THAN SIX (6) INCHES.
4. WIDTH – 12 FOOT MINIMUM, BUT NOT LESS THAN THE FULL WIDTH AT POINTS WHERE INGRESS OR EGRESS OCCURS. 24 FOOT MINIMUM IF SINGLE ENTRANCE TO SITE.
5. FILTER CLOTH TO BE PLACED OVER THE ENTIRE WIDTH AND LENGTH OF AREA PRIOR TO PLACING OF STONE.
6. SURFACE WATER – ALL SURFACE WATER FLOWING OR DIVERTED TOWARD CONSTRUCTION ENTRANCES SHALL BE PIPED BENEATH THE ENTRANCE. IF PIPING IS IMPRACTICAL, A MOUNTABLE BERM WITH 5:1 SLOPES WILL BE PERMITTED.
7. MAINTENANCE – THE ENTRANCE SHALL BE MAINTAINED IN A CONDITION WHICH WILL PREVENT TRACKING OR FLOWING OF SEDIMENT ONTO PUBLIC RIGHTS-OF-WAY. THIS MAY REQUIRE PERIODIC TOP DRESSING WITH ADDITIONAL STONE AS CONDITIONS DEMAND AND REPAIR AND/OR CLEANOUT OF ANY MEASURE USED TO TRAP SEDIMENT. ALL SEDIMENT SPILLED, DROPPED, WASHED OR TRACKED ONTO PUBLIC RIGHTS-OF-WAY MUST BE REMOVED IMMEDIATELY.
8. WASHING – WHEELS SHALL BE CLEANED TO REMOVE SEDIMENT PRIOR TO ENTRANCE ONTO PUBLIC RIGHTS-OF-WAY. WHEN WASHING IS REQUIRED, IT SHALL BE DONE ON AN AREA STABILIZED WITH STONE AND WHICH DRAINS INTO AN APPROVED SEDIMENT TRAPPING DEVICE.
9. PERIODIC INSPECTION AND NEEDED MAINTENANCE SHALL BE PROVIDED AFTER EACH RAIN.

STABILIZED CONSTRUCTION ENTRANCE — 2



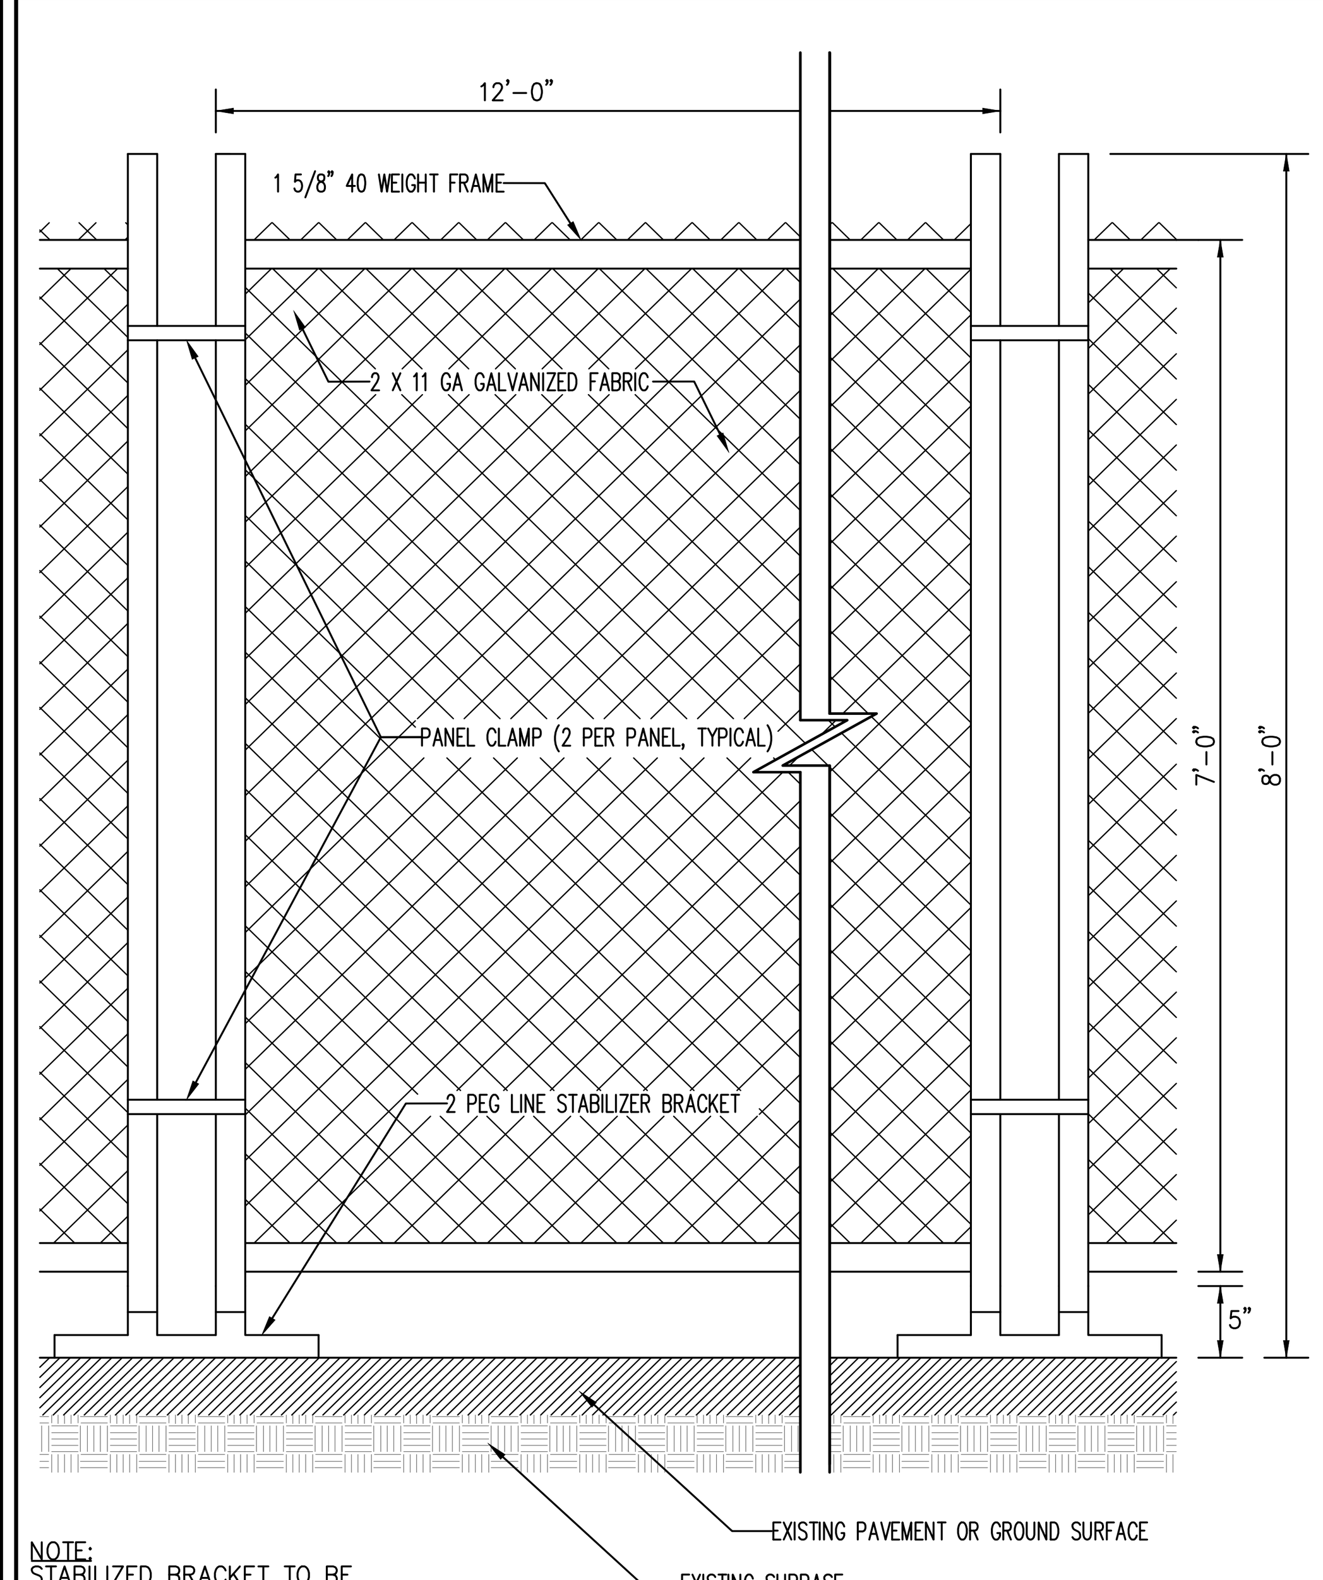
HI-FLOW SILT SACK AS MANUFACTURED BY ACF ENVIRONMENTAL OR APPROVED EQUAL®

(FOR AREAS OF MODERATE TO HEAVY PRECIPITATION AND RUN-OFF)

PROPERTIES	TEST METHOD	UNITS
GRAB TENSILE STRENGTH	ASTM D-4632	265 LBS
GRAB TENSILE ELONGATION	ASTM D-4632	20 %
PUNCTURE	ASTM D-4833	135 LBS
MULLEN BURST	ASTM D-3786	420 PSI
TRAPEZOID TEAR	ASTM D-4533	45 LBS
UV RESISTANCE	ASTM D-4355	90 %
APPARENT OPENING SIZE	ASTM D-4751	20 US SIEVE
FLOW RATE	ASTM D-4491	200 GAL/MIN/SQ FT
PERMITTIVITY	ASTM D-4491	1.5 SEC -1

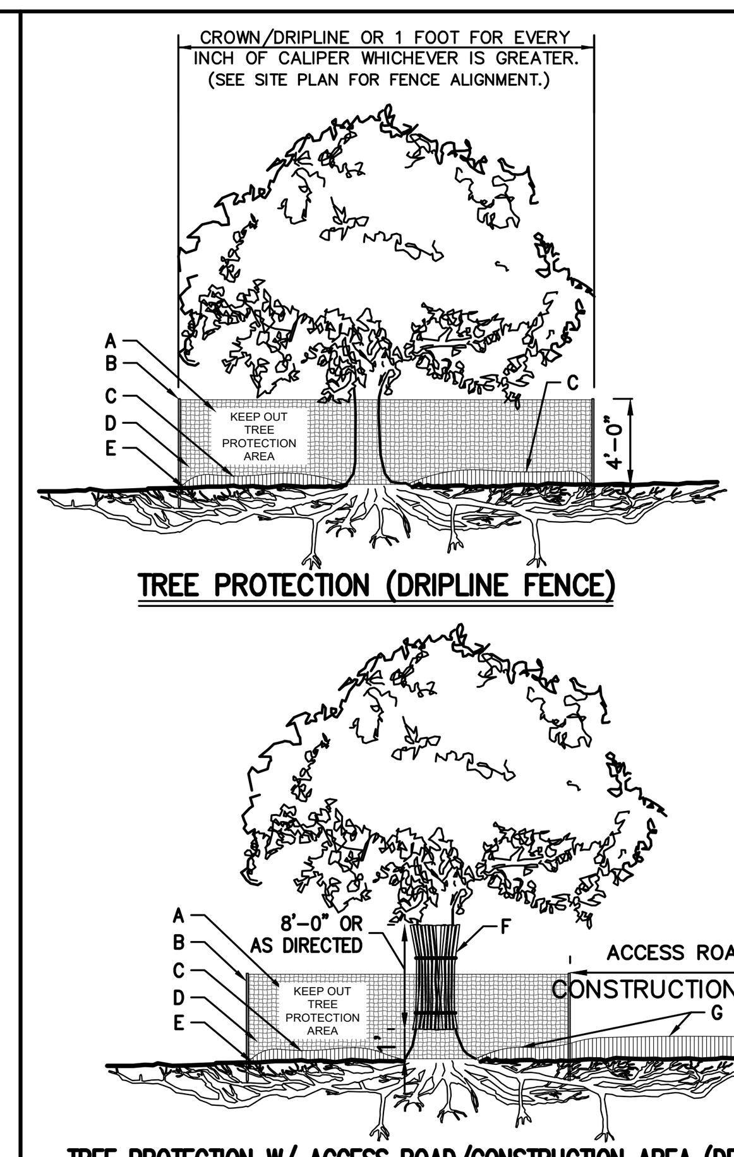
NOTE:
CURB INLETS SHALL BE TYPE B WITH CURB DEFLECTOR.

SILT SACK — 3



NOTE:
STABILIZED BRACKET TO BE HOT DIPPED GALVANIZED STEEL PIPE.

TEMPORARY CHAIN LINK CONSTRUCTION FENCE — 4



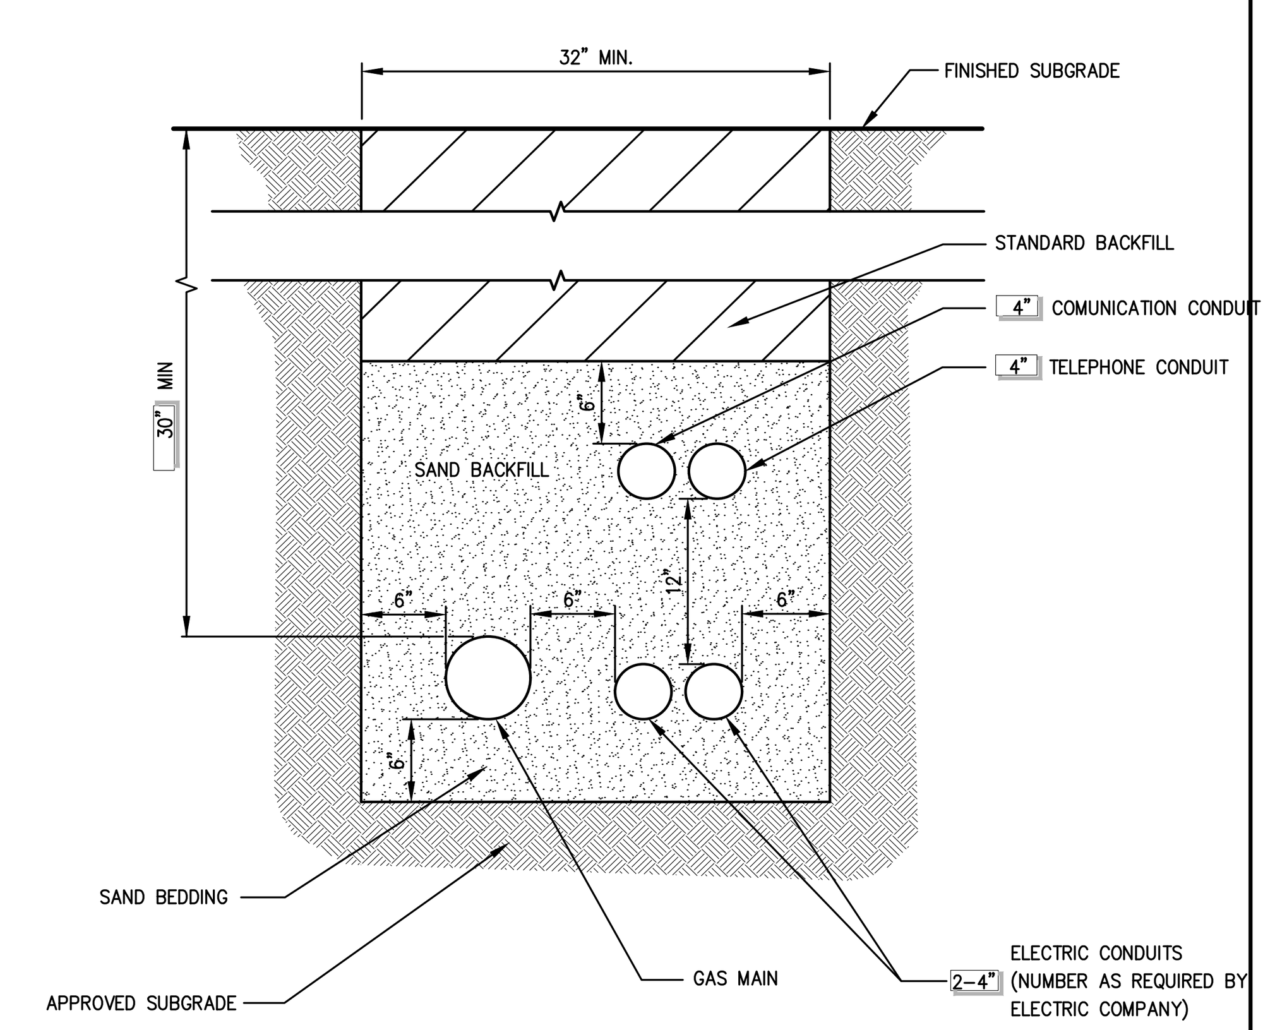
A	8.5"X11" SIGN LAMINATED IN PLASTIC SPACED EVERY 50' ALONG FENCE
B	2"X6' STEEL POSTS OR APPROVED EQUAL.
C	5" THICK LAYER OF MULCH.
D	TREE PROTECTION FENCE: HIGH DENSITY POLYETHYLENE FENCING WITH 3.5" X 1.5" OPENINGS; COLOR ORANGE. STEEL POSTS INSTALLED AT 8' O.C.
E	MAINTAIN EXISTING GRADE WITHIN THE TREE PROTECTION FENCE UNLESS OTHERWISE INDICATED ON THE PLANS.
F	INSTALL ROUGH SAWN WOOD WHERE AND AS DIRECTED BY PROJECT LANDSCAPE ARCHITECT OR PROFESSIONAL ARBORIST. SEE CHART FOR WOOD SIZE BOUND WITH 9 GAUGE WIRE.
G	8"-12" THICK LAYER OF MULCH ON MAINTENANCE ROAD. 5" THICK LAYER INSIDE TREE PROTECTION AREA.

TREE DIAMETER	ROUGH SAWN WOOD SIZE
<12"	2"X2"
13"-24"	2"X4"
>25"	2"X6"

NOTES:

1. SEE SPECIFICATIONS FOR ADDITIONAL TREE PROTECTION REQUIREMENTS.
2. IF THERE IS NO EXISTING IRRIGATION, SEE SPECIFICATIONS FOR WATERING REQUIREMENTS.
3. NO PRUNING SHALL BE PERFORMED EXCEPT BY APPROVED ARBORIST.
4. NO EQUIPMENT SHALL OPERATE INSIDE THE PROTECTIVE FENCING INCLUDING DURING FENCE INSTALLATION AND REMOVAL.
5. SEE SITE PLANS FOR IDENTIFICATIONS/LOCATIONS OF INDIVIDUAL TREES TO BE PROTECTED.
6. ALL EXCAVATION WITHIN THE CROWN/DRIPLINE OF ANY TREE SHALL BE PERFORMED UNDER THE DIRECT SUPERVISION OF THE PROJECT LANDSCAPE ARCHITECT OR PROFESSIONAL ARBORIST. SPECIAL MEASURES, SUCH AS THE USE OF AN AIR SPADE MAY BE REQUIRED.
7. THE CONTRACTOR MAY PROPOSE THE USE OF ENGINEERED MATTING OR OTHER ENGINEERED PRODUCTS IN LIEU OF MULCH, WHICH SHALL BE SUBJECT TO THE REVIEW AND APPROVAL OF ALL AUTHORITIES HAVING JURISDICTION.

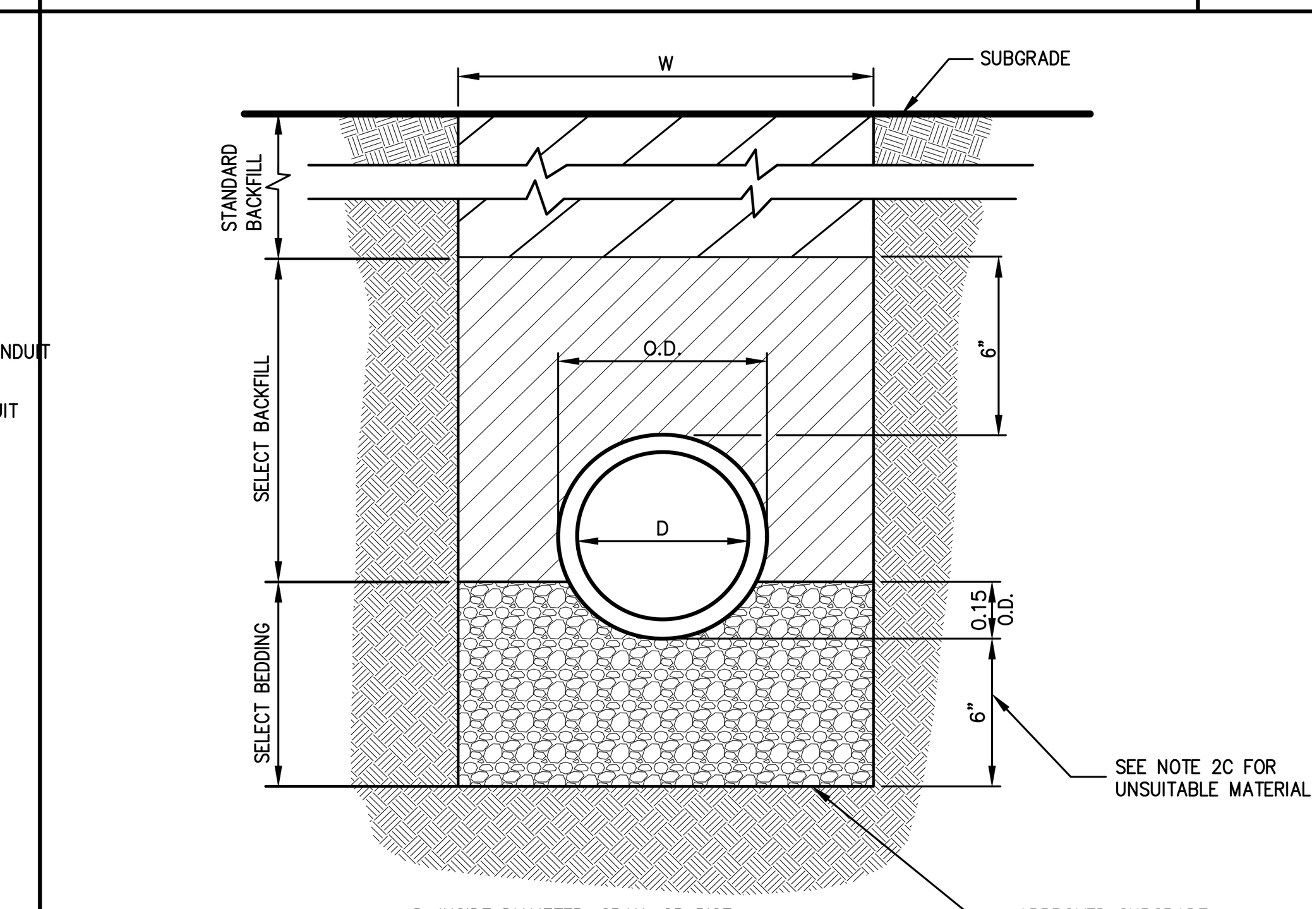
TREE PROTECTION — 5



NOTES:

1. UTILITIES TO BE INSTALLED IN ACCORDANCE WITH THE REGULATIONS AND REQUIREMENTS OF THE UTILITY COMPANY HAVING JURISDICTION.
2. BACKFILL FOR PIPE AND CONDUIT SHALL BE PLACED EVENLY AND CAREFULLY AROUND AND OVER THE PIPE OR CONDUIT IN SIX (6) INCH MAXIMUM LAYERS. EACH LAYER SHALL BE THOROUGHLY AND CAREFULLY COMPACTED UNTIL TWELVE (12) INCHES OF COVER EXISTS OVER THE PIPE OR CONDUIT. THE REMAINDER OF THE BACKFILL MAY THEN BE PLACED AND COMPACTED IN A MAXIMUM OF TWELVE (12) INCH LAYERS. EACH LAYER SHALL BE COMPACTED BY APPROVED MECHANICAL TAMPING MACHINES. UNLESS OTHERWISE SPESIFIED BACKFILL SHALL BE COMPACTED TO NOT LESS THAN 92% MAXIMUM MODIFIED DENSITY IN ACCORDANCE WITH ASTM DESIGNATION D-1557 IN THE MANNER HEREIN DESCRIBED. BACKFILL SHALL PROCEED UP TO THE LINES AND GRADES AS SHOWN ON THE DRAWINGS.

UTILITY TRENCH DETAIL — 6



D=INSIDE DIAMETER, SPAN, OR RISE
O.D.=OUTSIDE BARREL DIAMETER, SPAN OR RISE
H.D.=OUTSIDE DIAMETER, SPAN, OR RISE @ BELL OR BAND
W=H.D. + 2.0' – FOR 48" OR SMALLER DIAMETER, SPAN, OR RISE
W=H.D. + 2.5' – FOR GREATER THAN 48" DIAMETER, SPAN, OR RISE

NOTES:

1. FOR TYPE II TRENCH, MATERIAL FOR SELECT BEDDING AND SELECT BACKFILL SHALL BE:
   A. EITHER SAND OR CRUSHED STONE IF NO WATER IS ENCOUNTERED IN TRENCH.
   B. 3/4"CRUSHED STONE IF WATER IS ENCOUNTERED IN TRENCH.
2. TYPE II TRENCH SHALL BE USED IN ALL OF THE FOLLOWING CASES:
   A. FOR ALL CORRUGATED POLYETHYLENE DRAIN PIPE (CPDP) AND PVC PIPE AND CONDUIT INSTALLATION.
   B. WHEN ROCK OR HARDPAN IS ENCOUNTERED IN BOTTOM OF TRENCH.
   C. WHEN UNSUITABLE MATERIAL IS ENCOUNTERED IN BOTTOM OF TRENCH. IN SUCH CASE DEPTH OF UNDERCUTTING SHALL BE AS DIRECTED BY THE ENGINEER WITH 6" MINIMUM.
3. FOR ALL TRENCH EXCAVATION IN FILL AREAS, ALL EMBANKMENTS SHALL BE CONSTRUCTED TO A MINIMUM OF 2 FEET ABOVE THE OUTSIDE TOP (AT THE BELL) OF THE PIPE PRIOR TO BEGINNING ANY TRENCH EXCAVATION.
4. BACKFILL FOR PIPE AND CONDUIT SHALL BE PLACED EVENLY AND CAREFULLY AROUND AND OVER THE PIPE OR CONDUIT IN SIX (6) INCH MAXIMUM LAYERS. EACH LAYER SHALL BE THOROUGHLY AND CAREFULLY COMPACTED UNTIL TWELVE (12) INCHES OF COVER EXISTS OVER THE PIPE OR CONDUIT. THE REMAINDER OF THE BACKFILL MAY THEN BE PLACED AND COMPACTED IN A MAXIMUM OF TWELVE (12) INCH LAYERS. EACH LAYER SHALL BE COMPACTED BY APPROVED MECHANICAL TAMPING MACHINES. UNLESS OTHERWISE SPECIFIED BACKFILL SHALL BE COMPACTED TO NOT LESS THAN 92% MAXIMUM MODIFIED DENSITY IN ACCORDANCE WITH ASTM DESIGNATION D-1557 IN THE MANNER HEREIN DESCRIBED. BACKFILL SHALL PROCEED UP TO THE LINES AND GRADES AS SHOWN ON THE DRAWINGS.

TYPE II TRENCH — 7

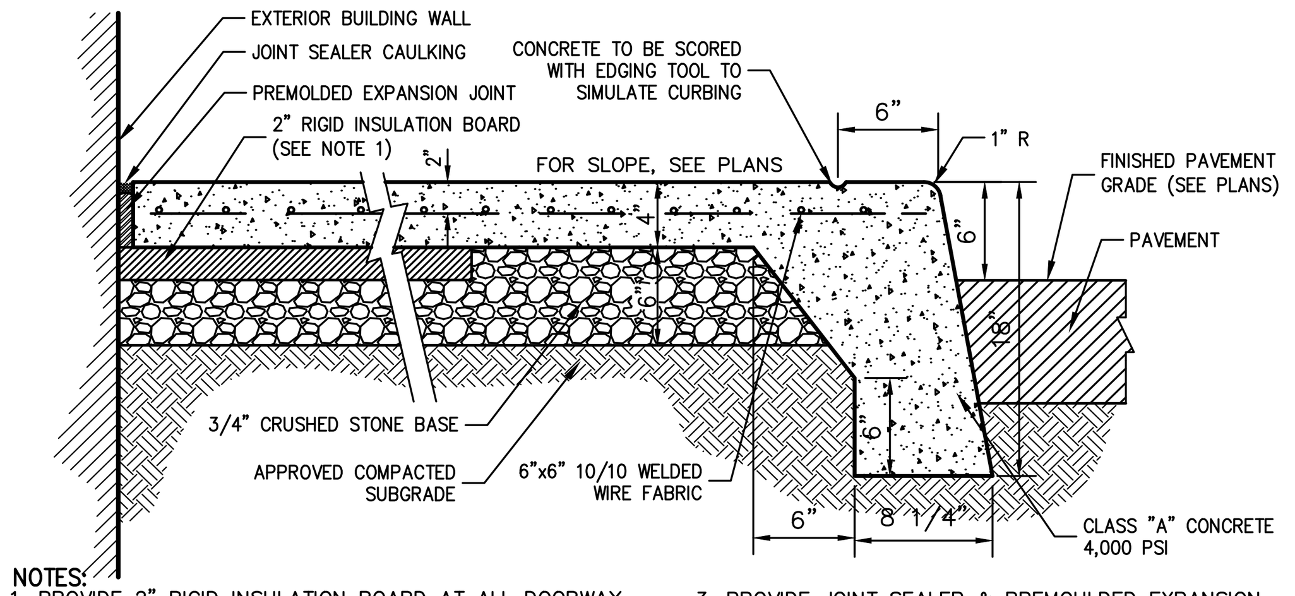
SITE DETAILS

GAS STATION / CONVENIENCE MARKET
657 SAW MILL RIVER ROAD
VILLAGE OF ARDSLEY, NEW YORK

Drawn: KRM Approved: RJP
Scale: NOT TO SCALE
Date: 05/26/2020
Project No: 18175
18175-DETAILS C-900 –
Drawing No: C-900

NOT FOR CONSTRUCTION



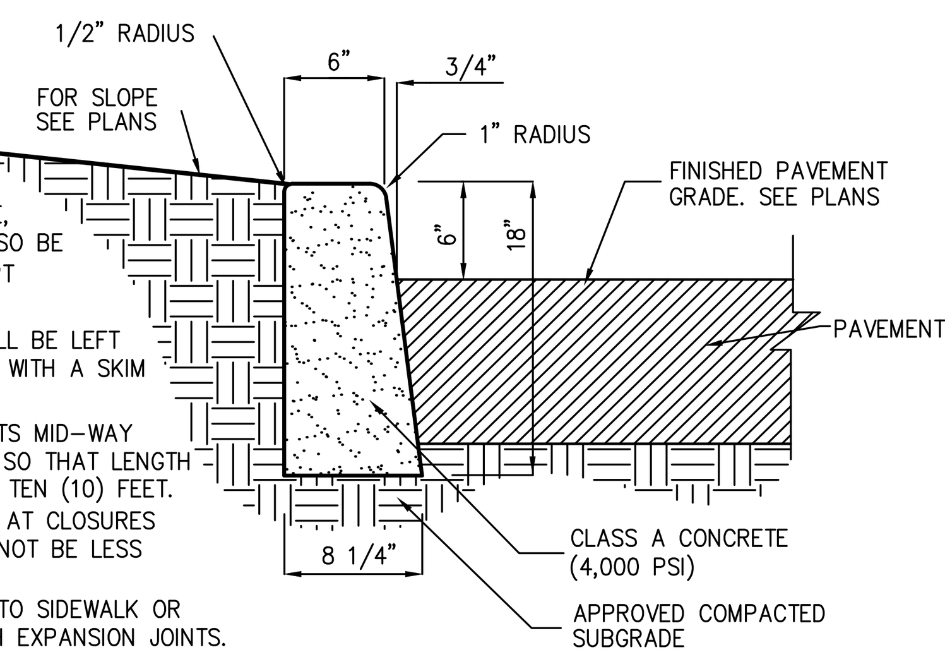
NOTES:

1. PROVIDE 2" RIGID INSULATION BOARD AT ALL DOORWAY OPENINGS AND EXTEND 8' MIN. IN ALL DIRECTIONS OR TO CONSTRUCTION/CONTRACTION JOINT, WHICHEVER IS GREATER.
2. JOINT SEALER CAULKING SHALL BE PSI-641 LOW MODULUS SILICONE SEALANT, BY POLYMERIC SYSTEMS INC. OR APPROVED EQUAL. PREMOULDED EXPANSION JOINT SHALL BE FLEXCELL OR APPROVED EQUAL.
3. PROVIDE JOINT SEALER & PREMOULDED EXPANSION JOINT AT ALL BLDG. WALLS, CONSTRUCTION JOINTS AND OTHER FIXED OBJECTS (HYDRANTS, LIGHT POLES, ETC.)
4. SIDEWALK SHALL HAVE LIGHT BROOM FINISH
5. SIDEWALK CROSS SLOPE SHALL BE 1% MIN. 2% MAX.
6. FOR SIDEWALK WIDTH SEE PLAN. SIDEWALK SHALL HAVE A 3' MIN. WIDTH CLEAR FROM BACK OF CURBING.

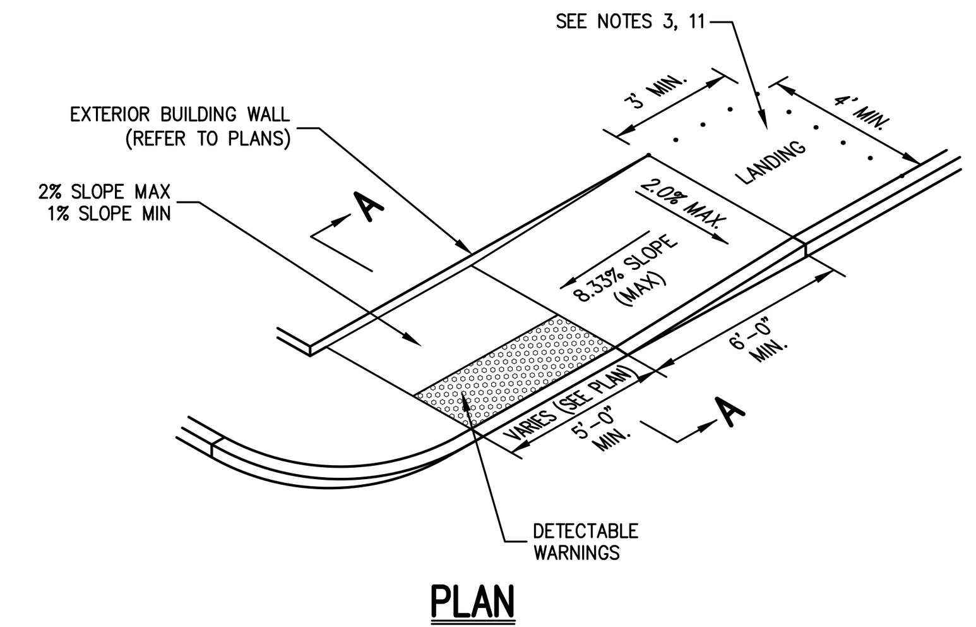
BUILDING PERIMETER MONOLITHIC CURB & SIDEWALK — 8

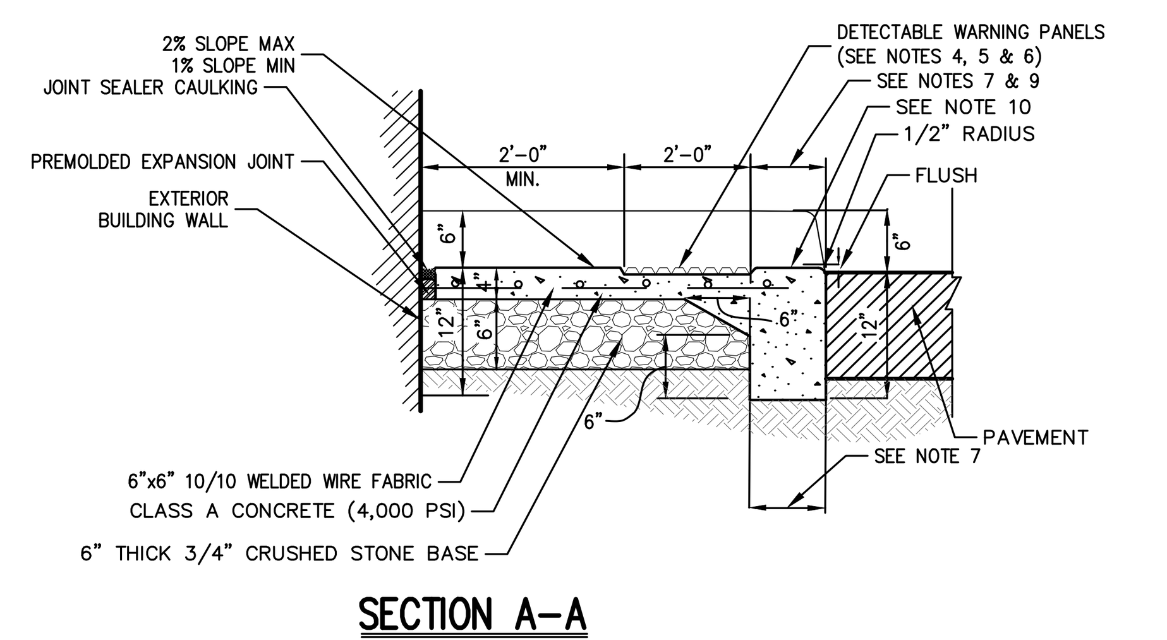
NOTES:

1. INSTALL 1/2" PREMOLDED BITUMINOUS EXPANSION JOINT EVER 20 FEET.
2. UNLESS DIRECTED OTHERWISE, EXPANSION JOINTS SHALL ALSO BE INSTALLED AT THE PC AND PT OF ALL RADIUS CURB.
3. EACH EXPANSION JOINT SHALL BE LEFT EXPOSED AND NOT COVERED WITH A SKIM COAT OF CONCRETE.
4. INSTALL CONSTRUCTION JOINTS MID-WAY BETWEEN EXPANSION JOINTS SO THAT LENGTH OF CURB SEGMENTS WILL BE TEN (10) FEET.
5. LENGTH OF CURB SEGMENTS AT CLOSURES MAY BE VARIED BUT SHALL NOT BE LESS THAN FOUR (4) FEET.
6. WHEN INSTALLED ADJACENT TO SIDEWALK OR CONCRETE PAVEMENT, MATCH EXPANSION JOINTS.



CAST-IN-PLACE CONCRETE CURB — 9

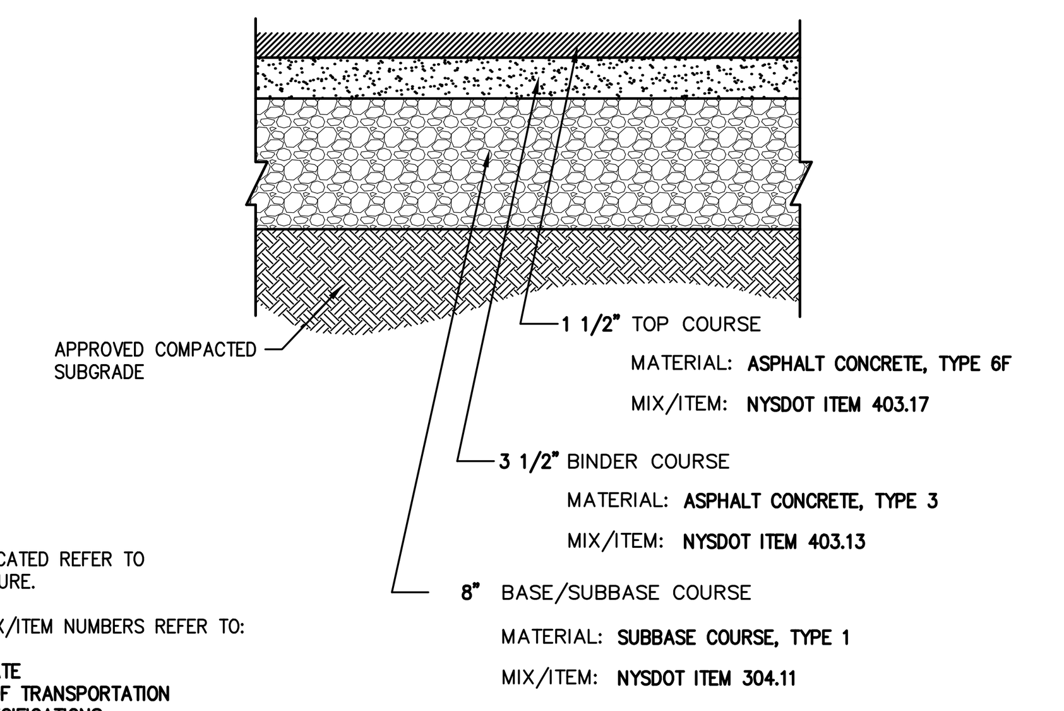




NOTES:

1. THE MAXIMUM RUNNING SLOPE OF A CURB RAMP SHALL BE 8.33%, AND THE MAXIMUM CROSS SLOPE SHALL BE 2.0% MEASURED WITH A 2 FOOT SMART LEVEL AS SPECIFIED IN "DIMENSIONAL TOLERANCES IN CONSTRUCTION AND FOR SURFACE ACCESSIBILITY", BY UNITED STATES ACCESS BOARD, LATEST EDITION.
2. COUNTER SLOPES OF ADJOINING GUTTERS AND ROAD SURFACES IMMEDIATELY ADJACENT TO THE CURB RAMP SHALL NOT BE STEEPER THAN 5%. THE ADJACENT SURFACES AT TRANSITIONS AT CURB RAMPS TO WALKS, GUTTERS AND STREETS SHALL BE AT THE SAME LEVEL.
3. LANDINGS SHALL BE PROVIDED AT THE TOP OF CURB RAMPS. THE CLEAR LENGTH OF THE LANDING SHALL BE THIRTY-SIX (36) INCHES MINIMUM. THE CLEAR WIDTH OF THE LANDING SHALL BE AT LEAST AS WIDE AS THE CURB RAMP, LEADING TO THE LANDING. LANDINGS SHALL HAVE A SLOPE NOT STEEPER THAN 2% IN ANY DIRECTION MEASURED WITH A 2 FOOT SMART LEVEL AS SPECIFIED IN "DIMENSIONAL TOLERANCES IN CONSTRUCTION AND FOR SURFACE ACCESSIBILITY", BY UNITED STATES ACCESS BOARD, LATEST EDITION.
4. RAMPS SHALL HAVE CAST IN PLACE DETECTABLE WARNINGS AS MANUFACTURED BY ARMOR-TILE (OR APPROVED EQUAL) AND SHALL CONSIST OF RAISED TRUNCATED DOMES WITH A BASE DIAMETER OF NOMINAL 0.9 INCHES, A HEIGHT OF NOMINAL 0.2 INCHES AND A CENTER TO CENTER SPACING OF NOMINAL 1.6 INCHES.
5. DETECTABLE WARNING SURFACES SHALL CONTRAST VISUALLY WITH ADJACENT WALKING SURFACES, EITHER LIGHT-ON-DARK OR DARK-ON-LIGHT IN ACCORDANCE WITH THE ADA STANDARDS FOR ACCESSIBLE DESIGN, THE BUILDING CODE, AND APPLICABLE LOCAL LAWS AND REGULATIONS, LATEST EDITIONS.
6. 24" WIDTH OF PANELS TO BE INSTALLED DIRECTLY BEHIND CURB AND IN ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS.
7. SEE PLANS AND DETAILS FOR CURB TYPE AND DIMENSIONS.
8. RAMP, CURB AND ADJACENT PAVEMENTS SHALL BE GRADED TO PREVENT PONDING.
9. CURB RAMPS AT MARKED CROSSINGS SHALL BE WHOLLY CONTAINED WITHIN THE MARKINGS, EXCLUDING ANY FLARED SIDES.
10. CONTRACTOR TO ENSURE TOP OF CURB MATCHES SLOPE OF RAMP.
11. CURB RAMPS SHALL NOT BE LOCATED IN AN AREA THAT INTERFERES WITH MINIMUM MANEUVERING CLEARANCES AT DOORS AND GATES.
12. CURB RAMP SHALL HAVE LIGHT BROOM FINISH.

SITE PARALLEL CURB RAMP (WITH DETECTABLE WARNING) — 10

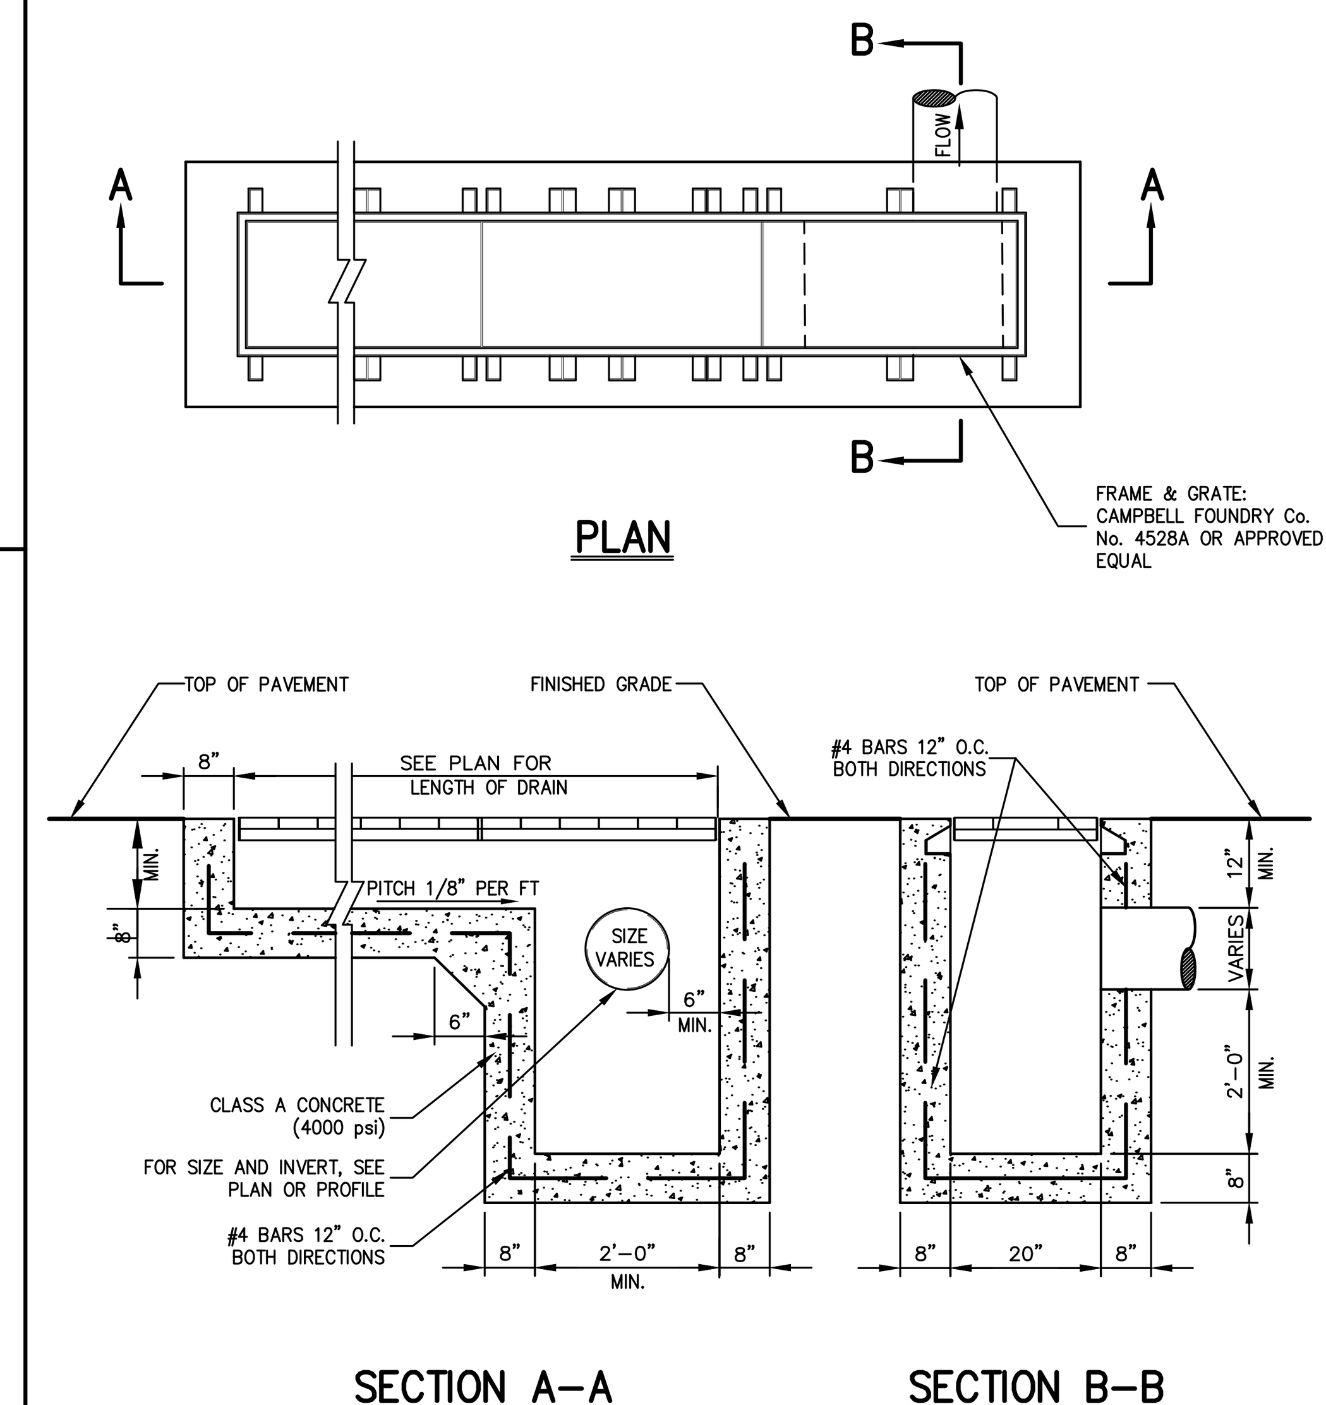


NOTES:

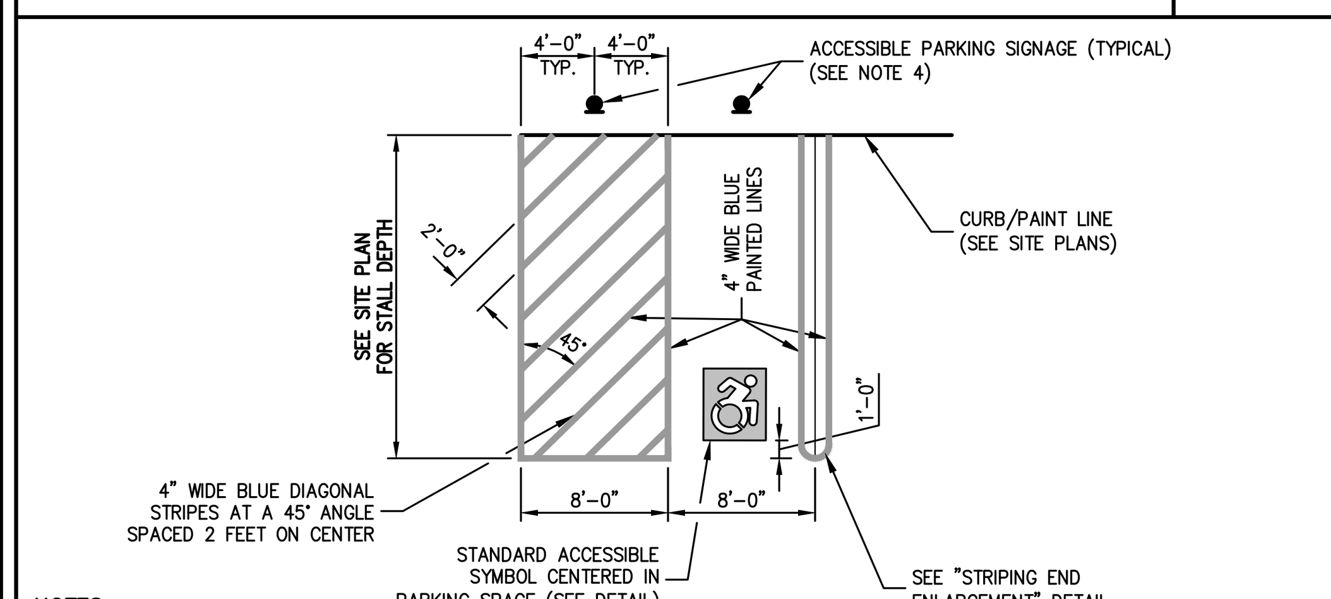
1. THICKNESSES INDICATED REFER TO COMPACTED MEASURE.
2. MATERIAL AND MIX/ITEM NUMBERS REFER TO:

NEW YORK STATE DEPARTMENT OF TRANSPORTATION STANDARD SPECIFICATIONS

SITE PAVEMENT (HEAVY DUTY) — 11



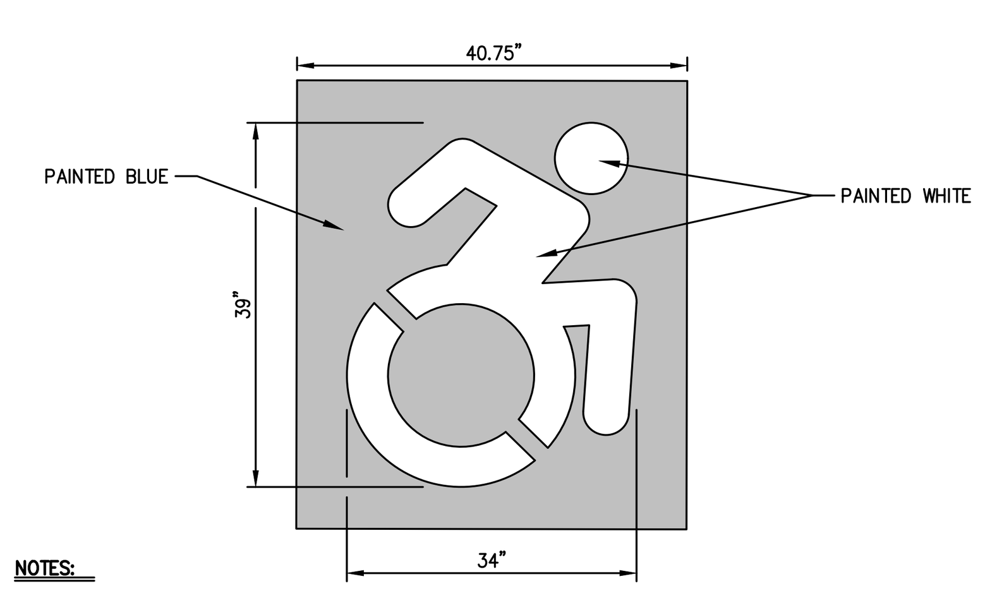
TRENCH DRAIN (END OUTLET) — 12



NOTES:

1. WIDTH MEASUREMENTS OF ACCESSIBLE PARKING SPACES AND ACCESS AISLES (CROSS HATCHED AREA ADJACENT TO ACCESSIBLE PARKING SPACE) SHALL BE MADE FROM THE CENTERLINE OF THE MARKINGS.
2. SLOPES IN ACCESSIBLE PARKING SPACES AND ACCESS AISLES SHALL NOT EXCEED 2.0% IN ANY DIRECTION MEASURED WITH A 2 FOOT SMART LEVEL AS SPECIFIED IN "DIMENSIONAL TOLERANCES IN CONSTRUCTION AND FOR SURFACE ACCESSIBILITY", BY UNITED STATES ACCESS BOARD, LATEST EDITION.
3. GROUND SURFACES FOR ACCESSIBLE PARKING SPACES AND ACCESS AISLES SERVING THEM SHALL BE STABLE, FIRM AND SLIP RESISTANT. ACCESS AISLES SHALL BE AT THE SAME LEVEL AS THE ACCESSIBLE PARKING SPACES THEY SERVE.
4. SEE SITE PLANS/SIGN TABLE FOR SIGN DESIGNATIONS, LOCATIONS AND SPECIFICATIONS.

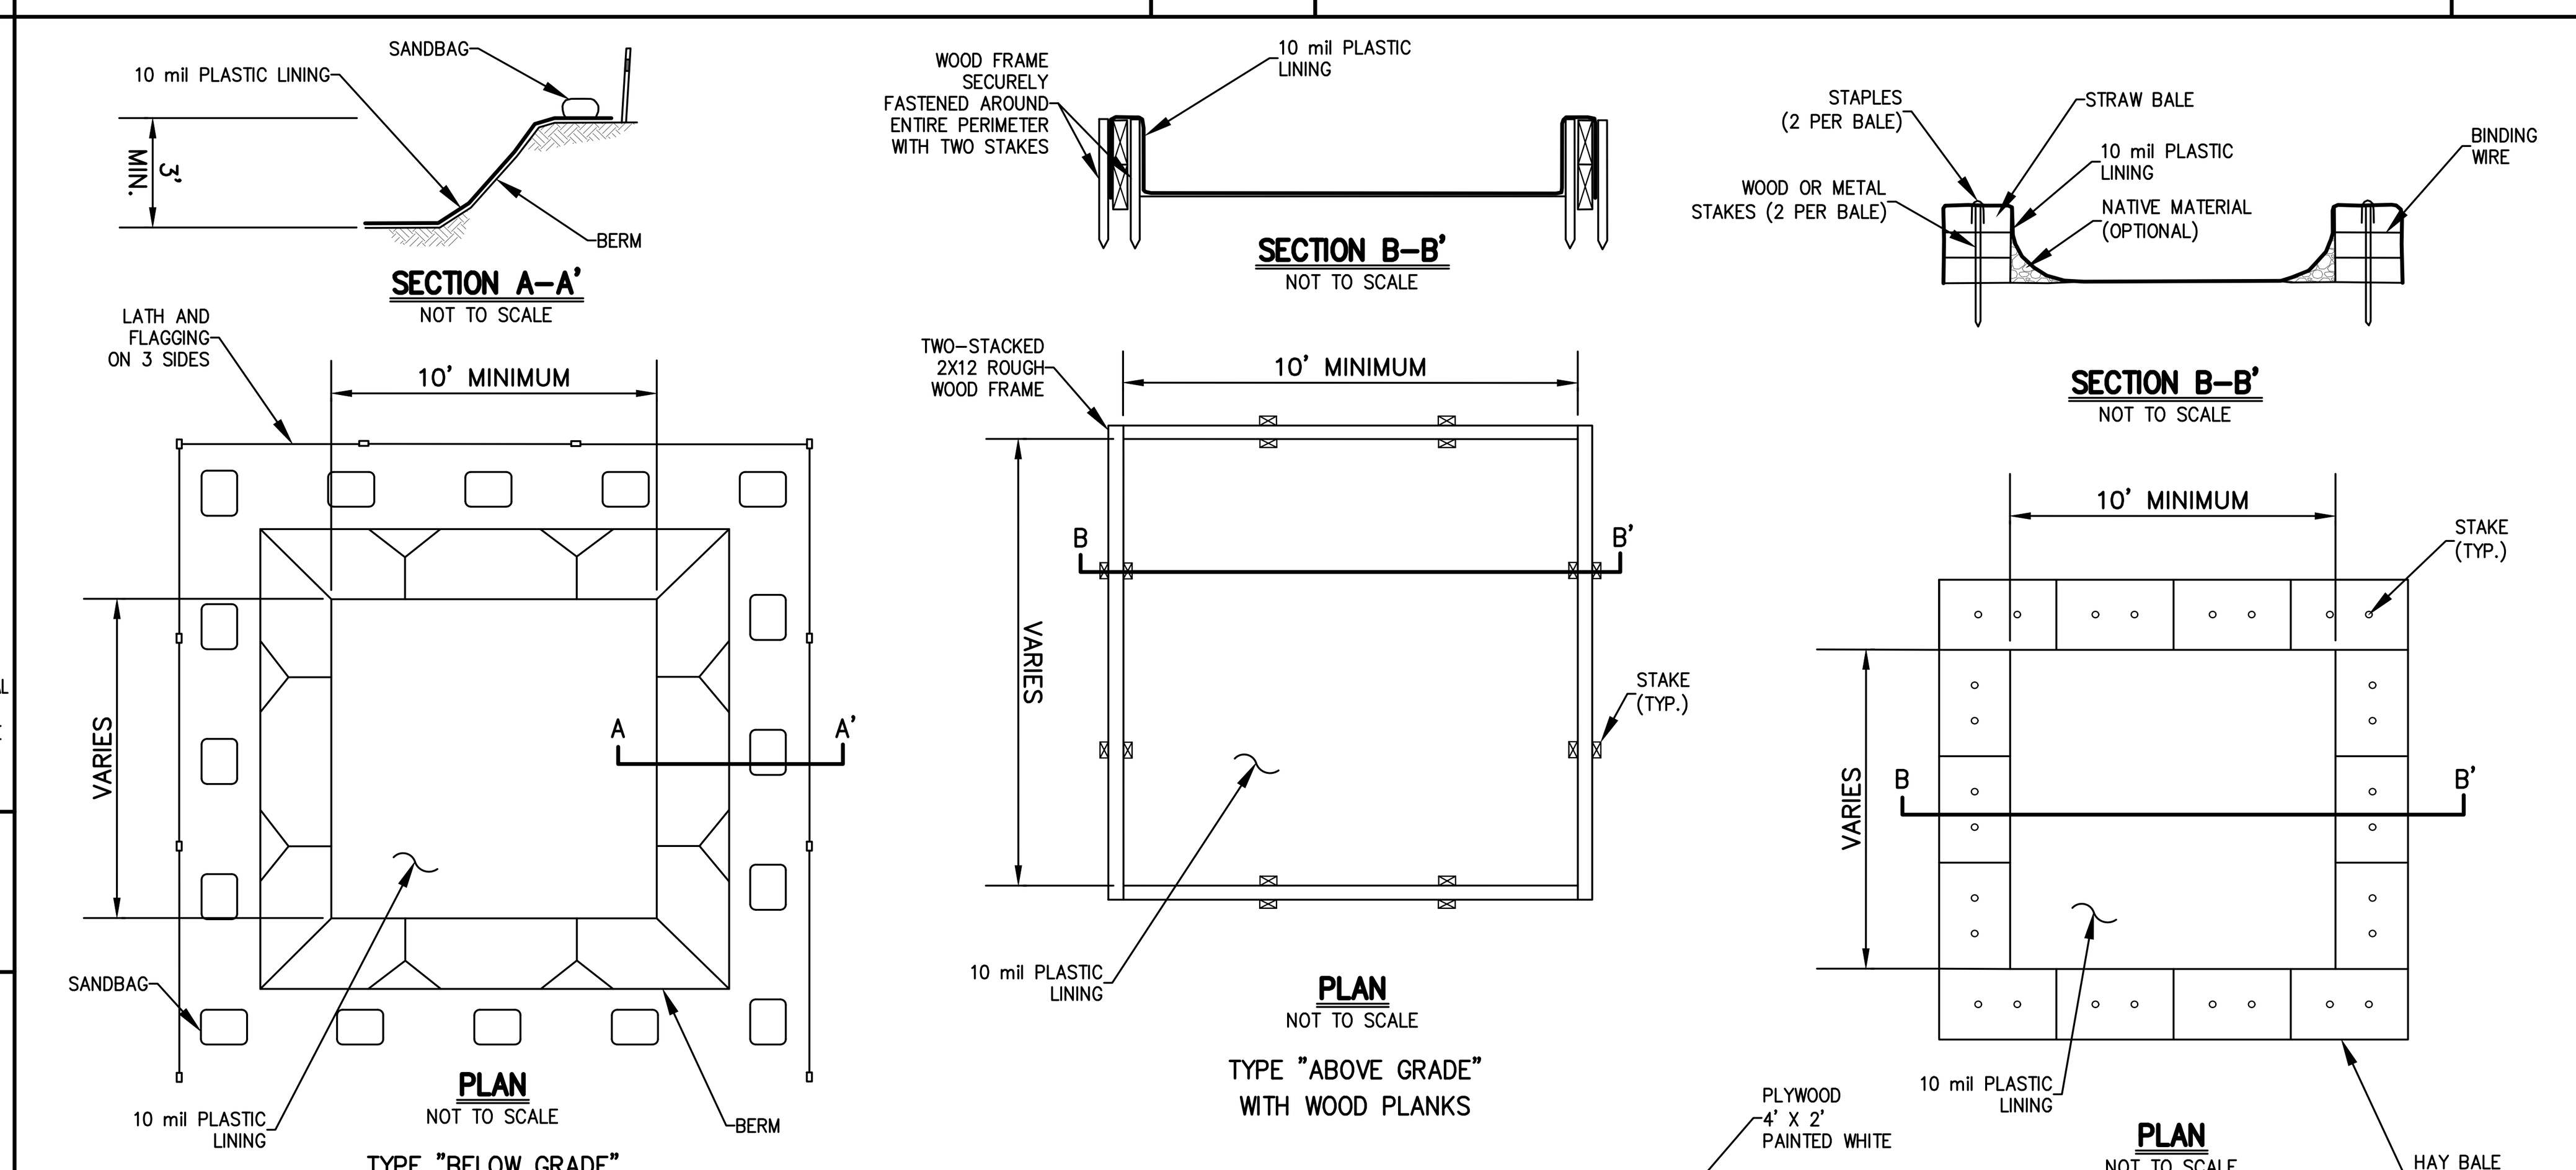
ACCESSIBLE PARKING — 13

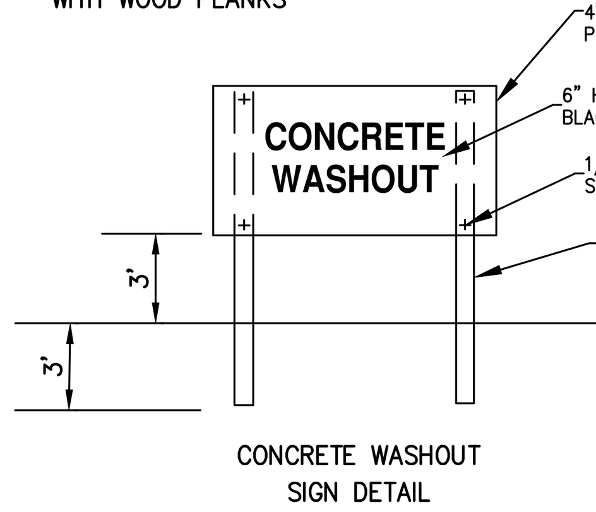


NOTES:

1. SYMBOL SHALL BE THERMOPLASTIC TYPE OR PAINTED WITH STENCIL.

PAINTED ACCESSIBLE SYMBOL — 13A



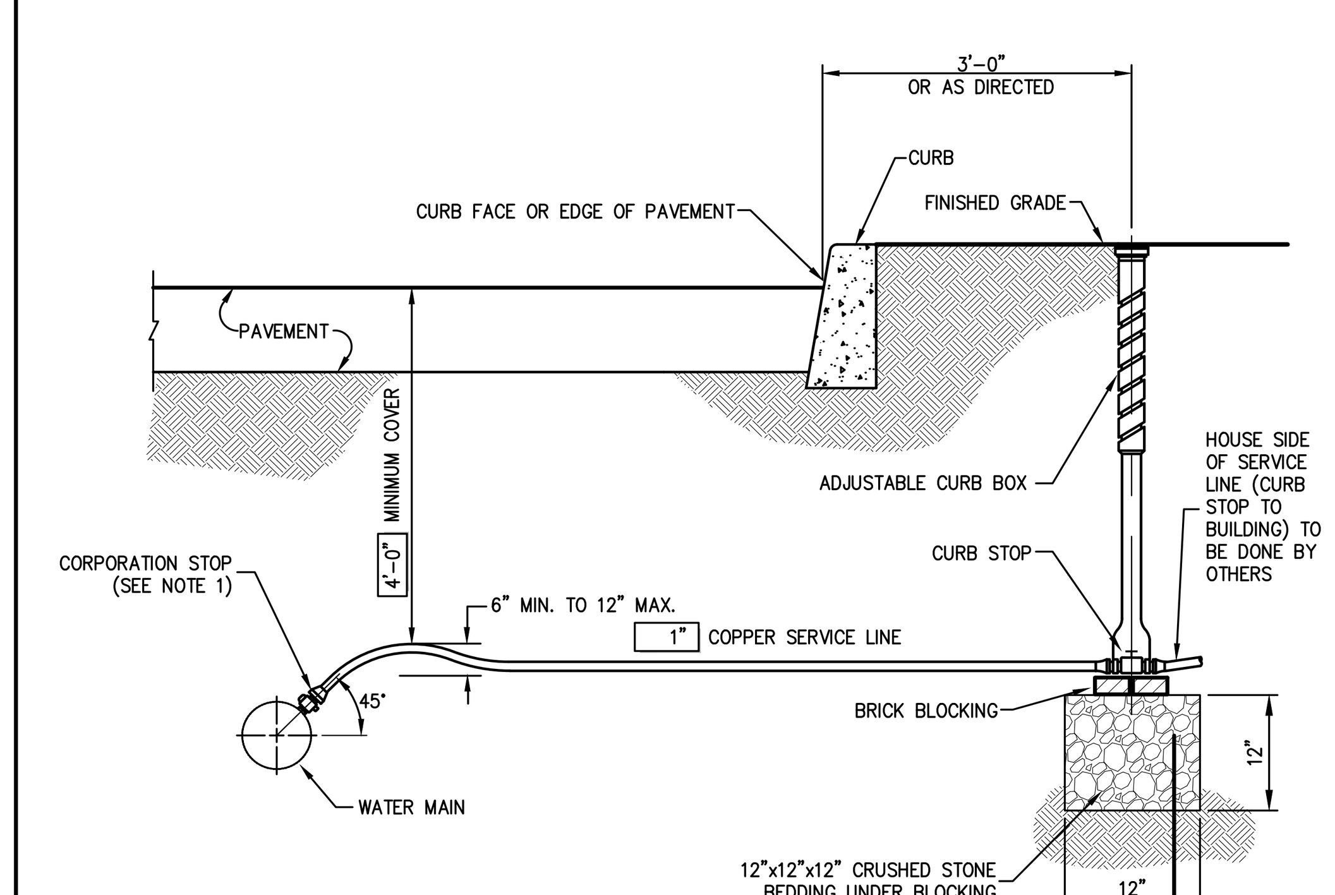


CONCRETE WASHOUT SIGN DETAIL (OR EQUIVALENT)

NOTES:

1. ACTUAL LAYOUT DETERMINED IN THE FIELD.
2. LOCATE WASHOUT AREA AT LEAST 50 FEET FROM SENSITIVE AREAS SUCH AS STORM DRAINS, OPEN DITCHES, OR WATER BODIES, INCLUDING WETLANDS.
3. THE CONSTRUCTION STORMWATER GENERAL PERMIT DOES NOT ALLOW OPERATORS TO DISCHARGE CONCRETE WASH WATER TO WATERWAYS, STORM DRAINS OR GROUNDWATER. OPERATORS MUST MANAGE AND CONTAIN THIS WATER TO PREVENT SPILLS, LEAKS OR DISCHARGES. DO NOT USE SANITARY SEWER WITHOUT LOCAL APPROVAL.
4. WASHOUT FACILITIES SHALL BE SIZED TO CONTAIN ALL LIQUIDS AND CONCRETE WASTE GENERATED BY WASHOUT OPERATIONS. APPROXIMATELY 7 GALLONS OF WASH WATER ARE USED TO WASH ONE TRUCK CHUTE AND APPROXIMATELY 50 GALLONS OF WASH WATER ARE USED TO WASH OUT THE HOPPER OF A CONCRETE PUMP TRUCK.
5. WASHOUT FACILITIES SHALL BE MAINTAINED TO PROVIDE ADEQUATE HOLDING CAPACITY WITH A MINIMUM FREEBOARD OF 12 INCHES.
6. THE CONCRETE WASHOUT SIGN (SEE PAGE 6) SHALL BE INSTALLED WITHIN 30 FEET OF THE TEMPORARY CONCRETE WASHOUT FACILITY. A SIGN SHOULD BE INSTALLED ADJACENT TO EACH CONCRETE WASHOUT FACILITY.
7. THE FACILITY NEEDS TO BE INSPECTED DAILY TO ENSURE PLASTIC LININGS ARE STILL INTACT AND SIDEWALLS ARE NOT DAMAGED.
8. THE FACILITY NEEDS TO BE CLEANED OR CHANGED WHEN 75% FULL.
9. IF THE WASHOUT IS NEARING CAPACITY, VACUUM AND DISPOSE OF THE WASTE MATERIAL IN AN APPROVED MANNER AND INSTALL A NEW PLASTIC LINING AFTER EVERY CLEANING.
10. PLACE A SECURE, NON-COLLAPSING, NON-WATER COLLECTING COVER OVER THE CONCRETE WASHOUT FACILITY PRIOR TO PREDICTED WET WEATHER.

CONCRETE WASHOUT — 14



SERVICE LINE REQUIREMENTS

SIZE	SERVICE LINE(MATERIALS)	CORPORATION STOP	CURB STOP	CURB BOX	ENLARGED BASE
3/4"	COPPER, TYPE K	H-15008 N	H-15214 N	H-10308	Not Applicable
1"	COPPER, TYPE K	H-15008 N	H-15214 N	H-10308	Not Applicable
1-1/2"	COPPER, TYPE K	H-15013 N	H-15214 N	H-10310	Not Applicable
2"	COPPER, TYPE K	H-15013 N	H-15214 N	H-10310	H-10349

NOTES:

1. INSTALLATION OF 1-1/2" AND 2" CORPORATION STOPS SHALL BE MADE IN THE UPPER PIPE QUADRANT, BUT MAY BE MADE AT ANGLES LESS THAN 45° IF APPROVED BY THE OWNER'S FIELD REPRESENTATIVE.
2. SERVICE LINE SHALL HAVE NO JOINTS BETWEEN THE WATER MAIN AND CURB STOP.
3. CORPORATION STOP, CURB STOP, CURB BOX AND ENLARGED BASE FOR CURB BOX SHALL BE MUELLER COMPANY OR APPROVED EQUAL. CATALOG NUMBERS SHOWN REFER TO MUELLER COMPANY.
4. ALL SERVICE BRASS SHALL COMPLY WITH AWWA C-800. COMPONENTS IN CONTACT WITH POTABLE WATER SHALL ALSO COMPLY WITH LATEST REQUIREMENTS OF THE FEDERAL SAFE DRINKING WATER ACT.

WATER SERVICE CONNECTION (2" OR LESS) — 15

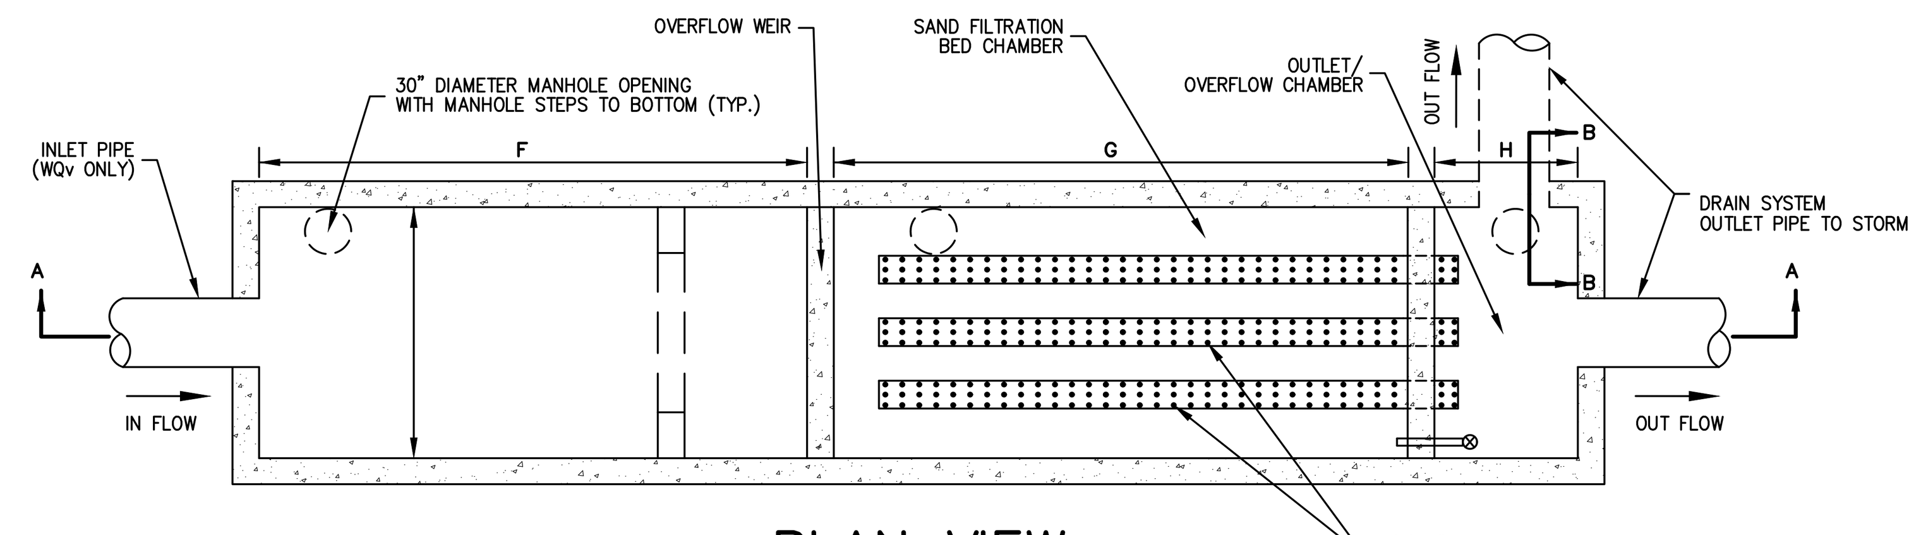
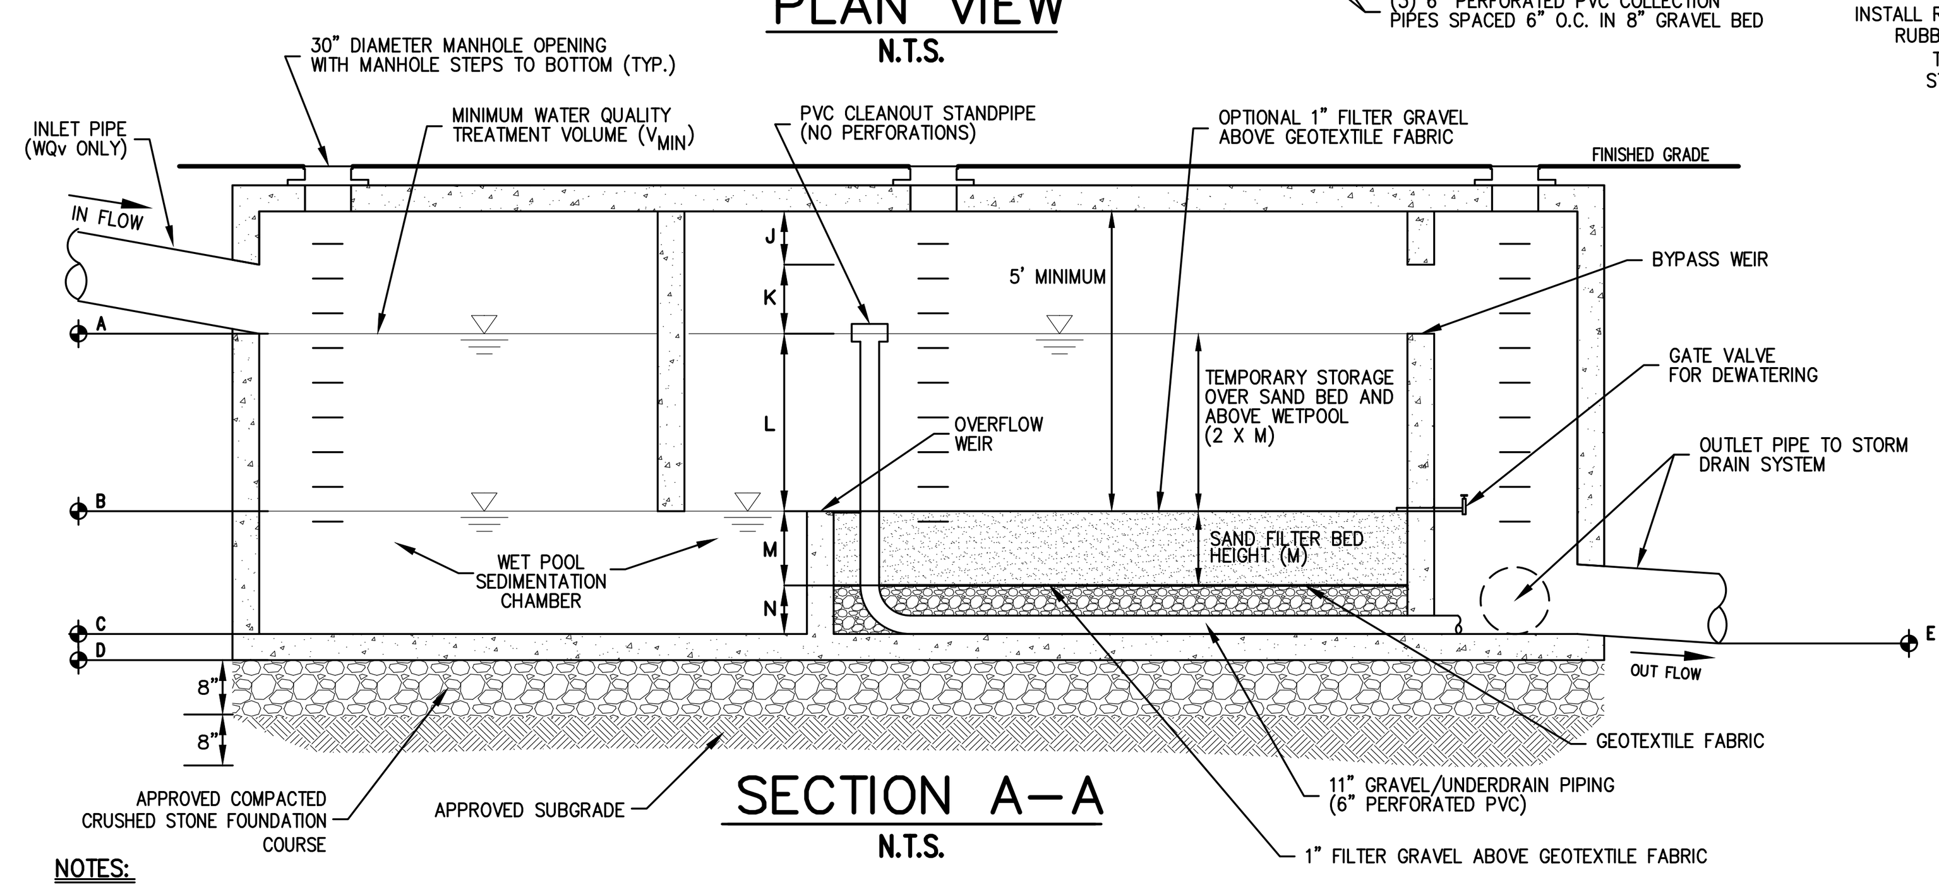
NOT FOR CONSTRUCTION





NOTES:

1. MANHOLE STEPS SHALL BE CAST IRON NEENAH No. R–1981–0 OR CAMPBELL FOUNDRY No. 2588–1 OR POLYPROPYLENE COATED STEEL (SEE SPECIFICATIONS) OR APPROVED EQUAL.
2. MANHOLES SHALL MEET OR EXCEED A.S.T.M. AND O.S.H.A. REQUIREMENTS. SEE "NOTES PERTAINING TO MANHOLES" UNDER "UTILITY NOTES" ON DRAWING
3. UNLESS OTHERWISE SPECIFIED, STORM DRAIN MANHOLES SHALL HAVE LETTERS "DRAIN" CAST ON COVER. THE COVERS SHALL HAVE VENT HOLES.
3. SAND FOR FILTER BED AREA SHALL BE AASHTO M–6 OR ASTM C–33 CONCRETE SAND.
4. UNDERDRAIN GRAVEL SHALL MEET AASHTO M–43 NO. 67. REQUIREMENTS.
5. GEOTEXTILE MATERIAL SHALL MEET ASTM STANDARDS D–751, D–1117, AND D–1682.
6. UNDERDRAIN PIPING SHALL BE 6" POLYVINYL CHLORIDE (PVC) SDR–35 AND SHALL MEET ASTM D–1785 OR AASHTO M–278 STANDARDS.
7. STRUCTURE SHALL BE DESIGNED TO ACCOMMODATE H–20 LOADING.

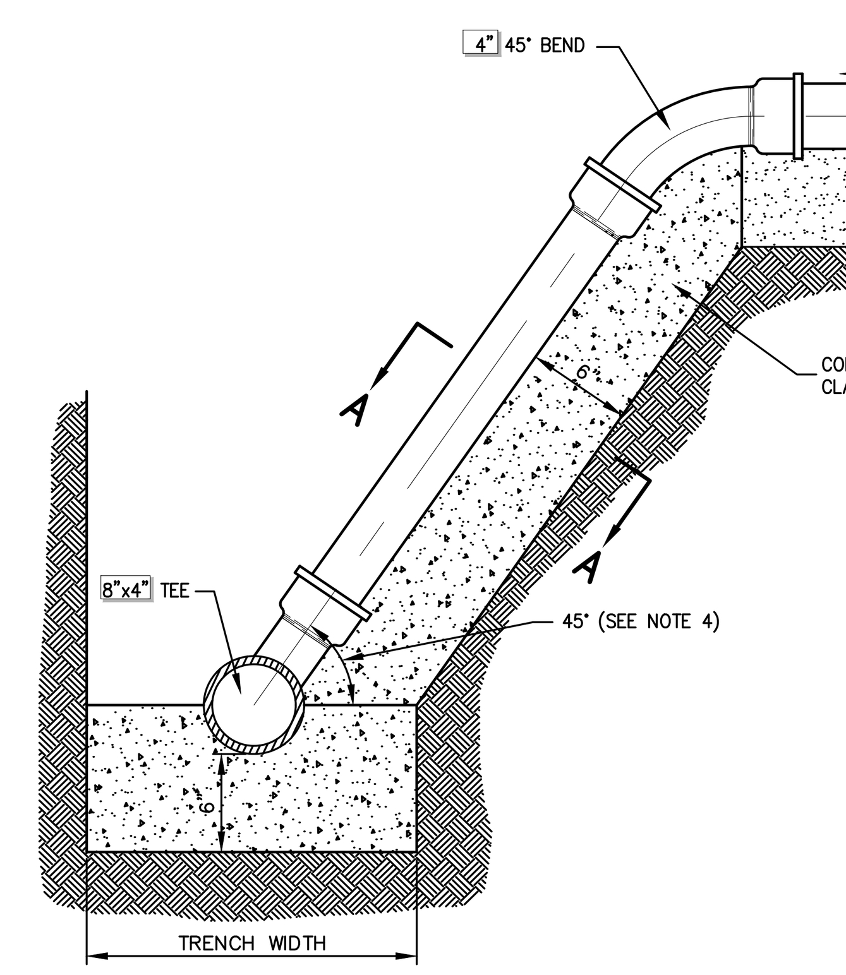
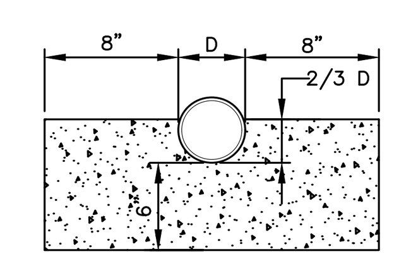
PEAK FLOW RATE (cfs [L/s])			
RETURN PERIOD OF PEAK FLOW (yrs)			
RIM ELEVATION			
PIPE DATA:	INVERT	MATERIAL	DIAMETER
INLET PIPE 1			
INLET PIPE 2			
OUTLET PIPE			
NOTES / SPECIAL REQUIREMENTS:			

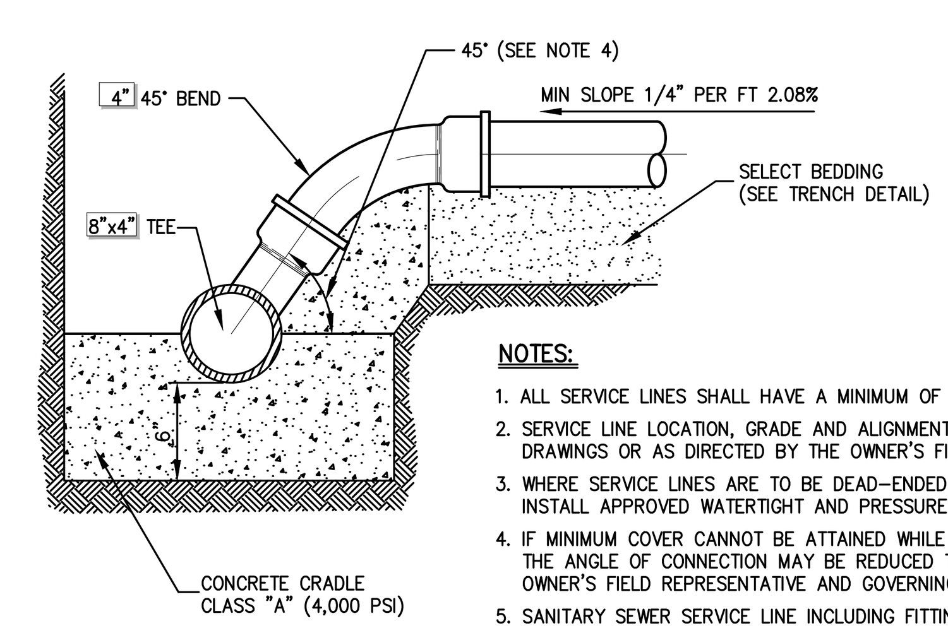
GENERAL NOTES
1. CONTECH TO PROVIDE ALL MATERIALS UNLESS NOTED OTHERWISE.
2. FOR SITE SPECIFIC DRAWINGS WITH DETAILED STRUCTURE DIMENSIONS AND WEIGHT, PLEASE CONTACT YOUR CONTECH ENGINEERED SOLUTIONS LLC REPRESENTATIVE. www.ContechES.com
3. CASCADE SEPARATOR WATER QUALITY STRUCTURE SHALL BE IN ACCORDANCE WITH ALL DESIGN DATA AND INFORMATION CONTAINED IN THIS DRAWING. CONTRACTOR TO CONFIRM STRUCTURE MEETS REQUIREMENTS OF PROJECT.
4. CASCADE SEPARATOR STRUCTURE SHALL MEET AASHTO HS20 LOAD RATING, ASSUMING EARTH COVER OF 0' - 2' [610], AND GROUNDWATER ELEVATION AT, OR BELOW, THE OUTLET PIPE INVERT ELEVATION. ENGINEER OF RECORD TO CONFIRM ACTUAL GROUNDWATER ELEVATION. CASTINGS SHALL MEET AASHTO M306 AND BE CAST WITH THE CONTECH LOGO.
5. CASCADE SEPARATOR STRUCTURE SHALL BE PRECAST CONCRETE CONFORMING TO ASTM C478 AND AASHTO LOAD FACTOR DESIGN METHOD.
6. ALTERNATE UNITS ARE SHOWN IN MILLIMETERS [mm].

INSTALLATION NOTES
A. ANY SUB-BASE, BACKFILL DEPTH, AND/OR ANTI-FLOTATION PROVISIONS ARE SITE-SPECIFIC DESIGN CONSIDERATIONS AND SHALL BE SPECIFIED BY ENGINEER OF RECORD.
B. CONTRACTOR TO PROVIDE EQUIPMENT WITH SUFFICIENT LIFTING AND REACH CAPACITY TO LIFT AND SET THE CASCADE SEPARATOR MANHOLE STRUCTURE.
C. CONTRACTOR TO INSTALL JOINT SEALANT BETWEEN ALL STRUCTURE SECTIONS AND ASSEMBLE STRUCTURE.
D. CONTRACTOR TO PROVIDE, INSTALL, AND GROUT INLET AND OUTLET PIPE(S). MATCH PIPE INVERTS WITH ELEVATIONS SHOWN. ALL PIPE CENTERLINES TO MATCH PIPE OPENING CENTERLINES.
E. CONTRACTOR TO TAKE APPROPRIATE MEASURES TO ASSURE UNIT IS WATER TIGHT, HOLDING WATER TO FLOWLINE INVERT MINIMUM. IT IS SUGGESTED THAT ALL JOINTS BELOW PIPE INVERTS ARE GROUTED.

WATER QUALITY STRUCTURE 17



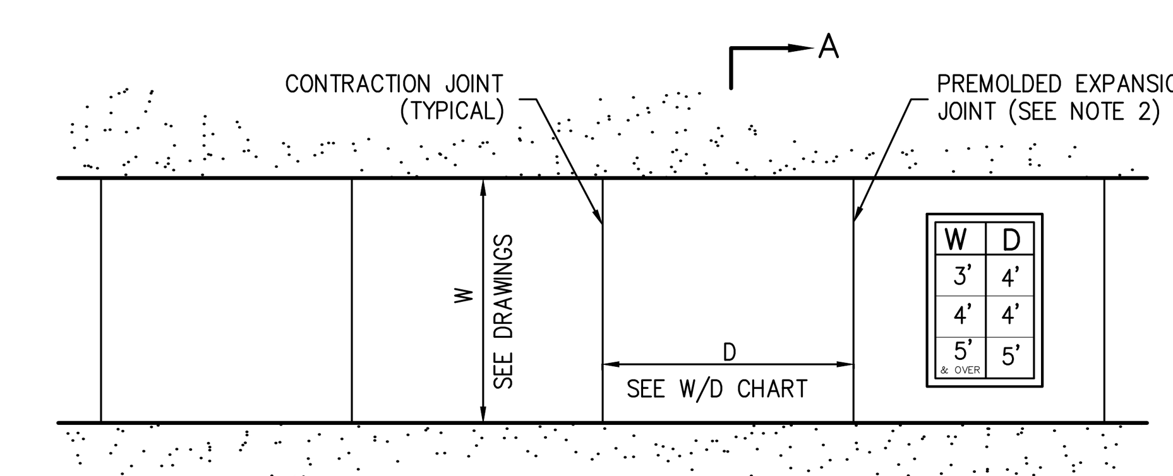


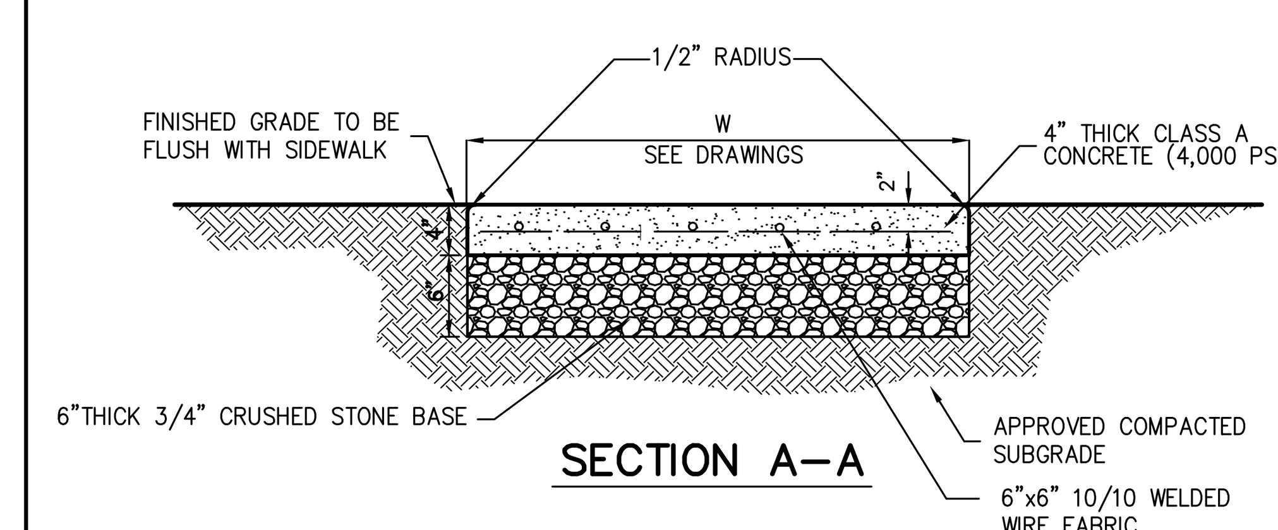


NOTES:

1. ALL SERVICE LINES SHALL HAVE A MINIMUM OF FOUR (4) FEET OF COVER.
2. SERVICE LINE LOCATION, GRADE AND ALIGNMENT SHALL BE AS SHOWN ON DRAWINGS OR AS DIRECTED BY THE OWNER'S FIELD REPRESENTATIVE.
3. WHERE SERVICE LINES ARE TO BE DEAD–ENDED, CONTRACTOR SHALL INSTALL APPROVED WATERTIGHT AND PRESSURE–TIGHT PLUGS.
4. IF MINIMUM COVER CANNOT BE ATTAINED WHILE MAINTAINING MINIMUM SLOPE, THE ANGLE OF CONNECTION MAY BE REDUCED TO 22.5°, IF APPROVED BY THE OWNER'S FIELD REPRESENTATIVE AND GOVERNING BODY WITH JURISDICTION.
5. SANITARY SEWER SERVICE LINE INCLUDING FITTINGS SHALL BE PVC, SDR 35.

SANITARY SEWER SERVICE CONNECTION 18





NOTES:

1. SIDEWALK CROSS SLOPE SHALL BE 1% MIN. TO 2% MAX.
2. PROVIDE 1/2" PREMOLDED EXPANSION JOINTS AT 20' INTERVALS UNLESS OTHERWISE DIRECTED.
3. REINFORCING SHALL NOT EXTEND THROUGH EXPANSION JOINTS.
4. SIDEWALK SHALL HAVE LIGHT BROOM FINISH.

CONCRETE SIDEWALK 19

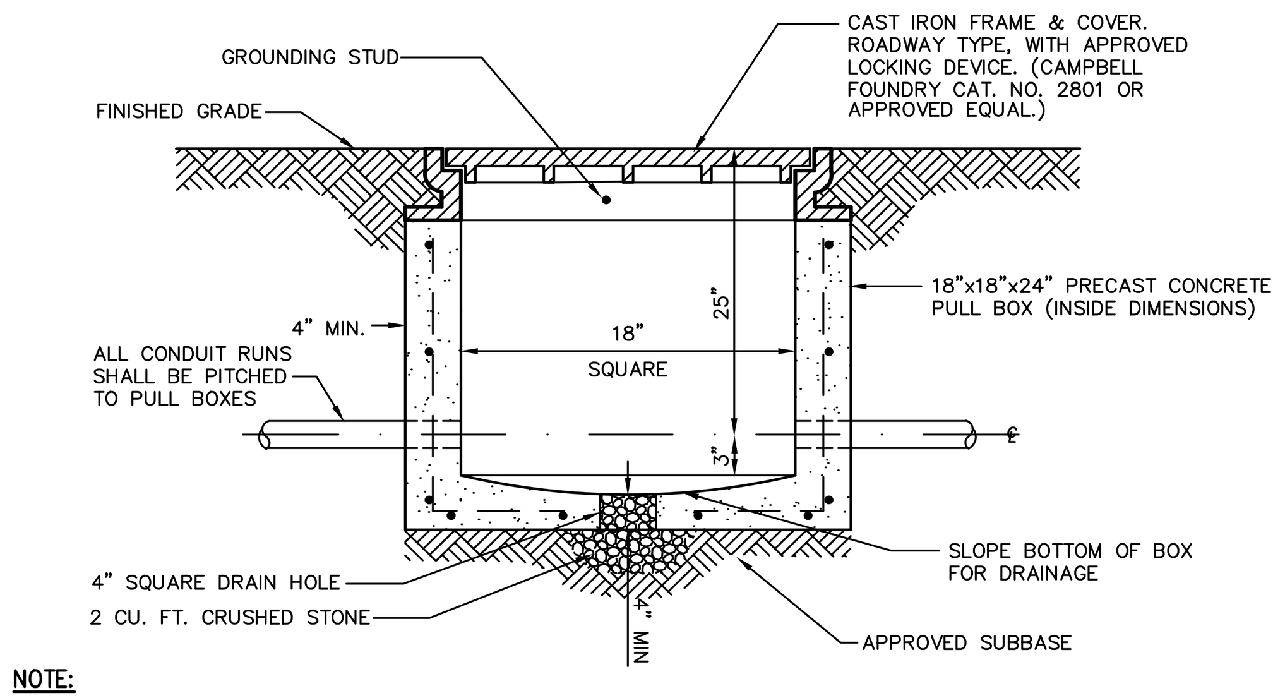
SITE DETAILS

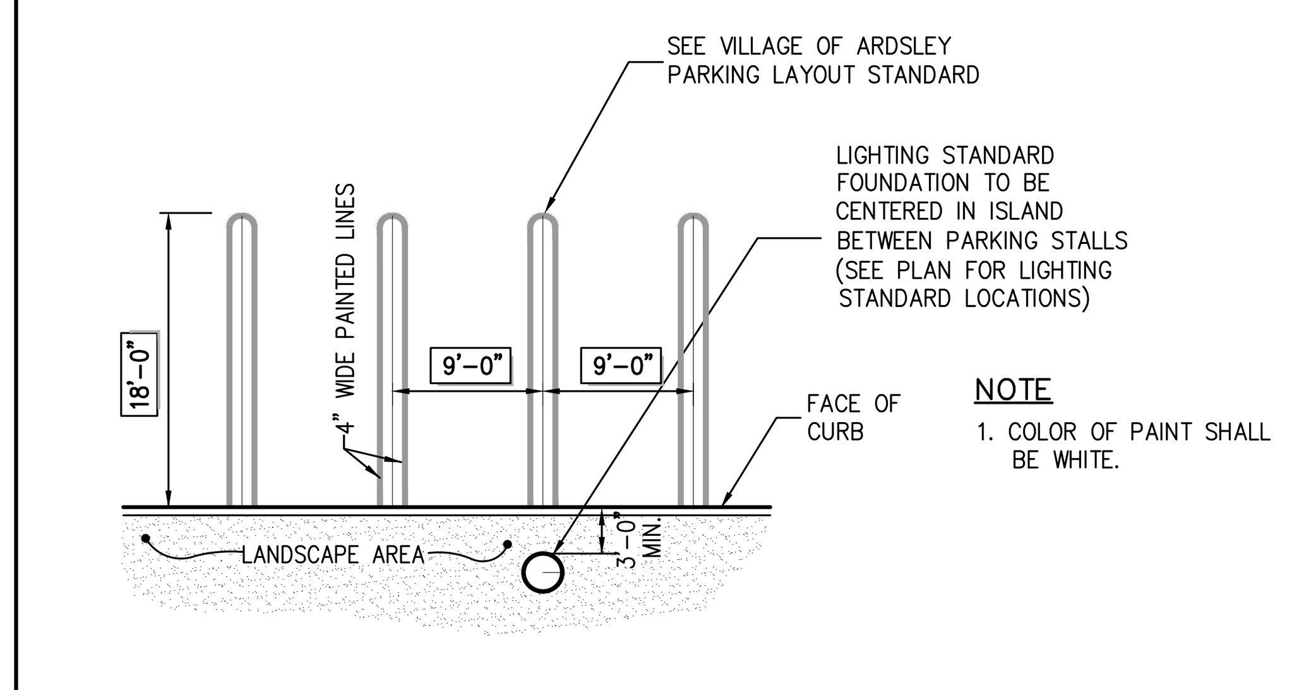
GAS STATION / CONVENIENCE MARKET
657 SAW MILL RIVER ROAD
VILLAGE OF ARDSLEY, NEW YORK

Drawn: KRM Approved: RJP
Scale: NOT TO SCALE
Date: 05/26/2020
Project No: 18175
18175-DETAILS C–902 –
Drawing No: C–902



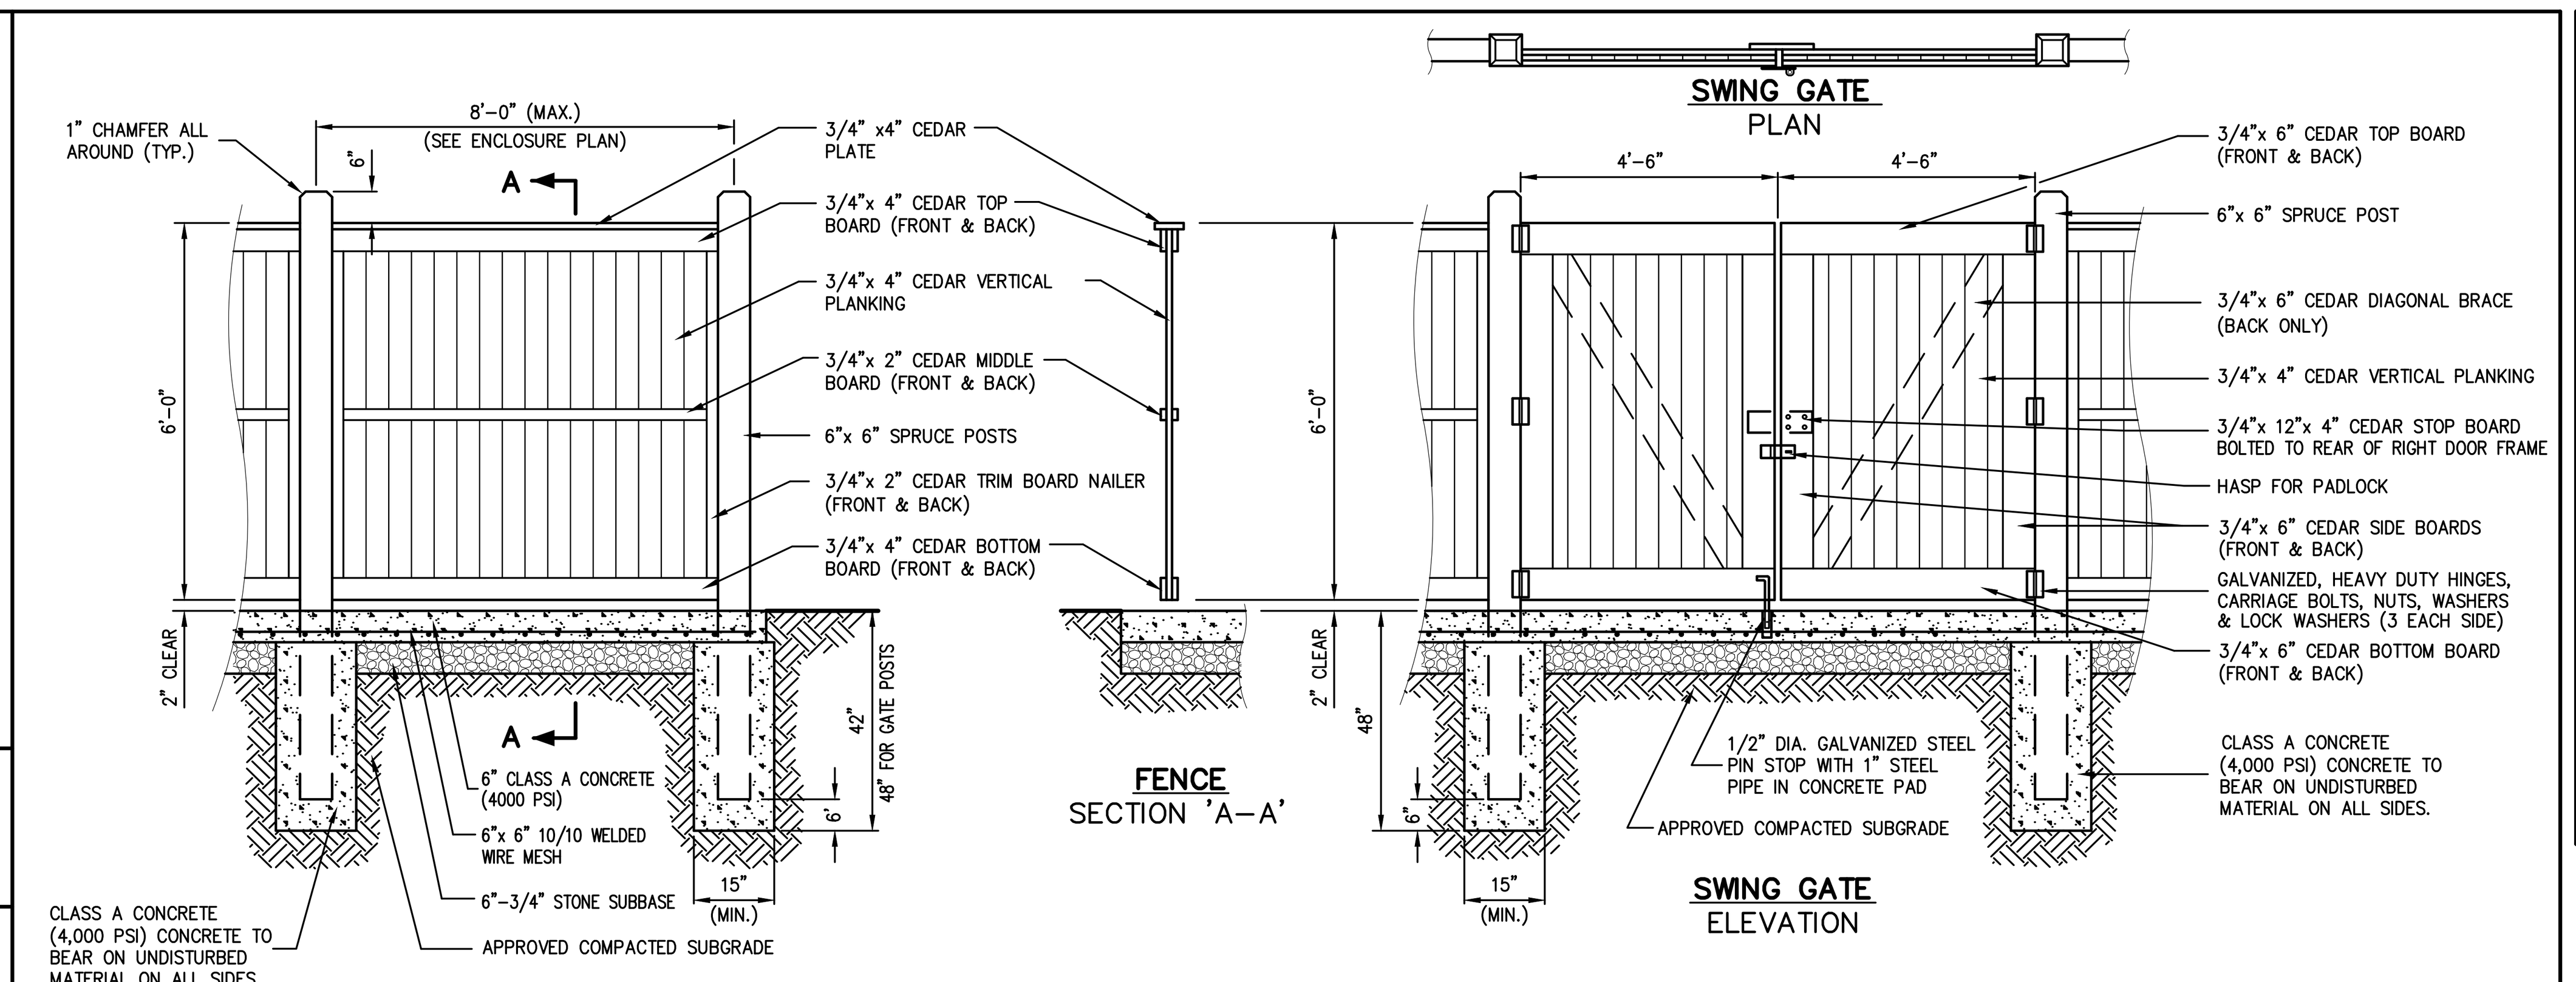
NOTE:
PRECAST CONCRETE PULL BOX TO BE DESIGNED FOR H-20 DESIGN LOAD.

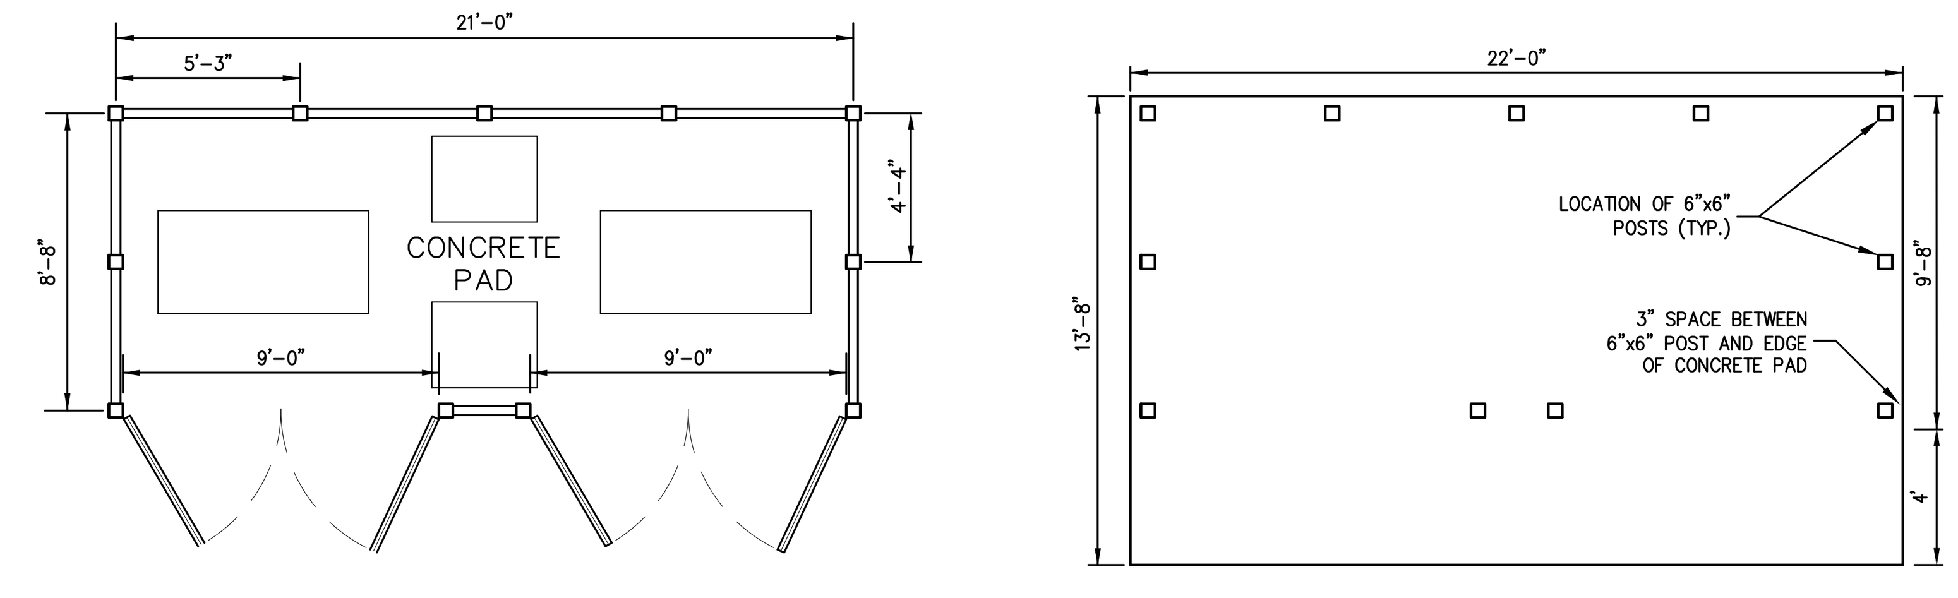
ELECTRICAL PULL BOX — 20



NOTE
1. COLOR OF PAINT SHALL BE WHITE.

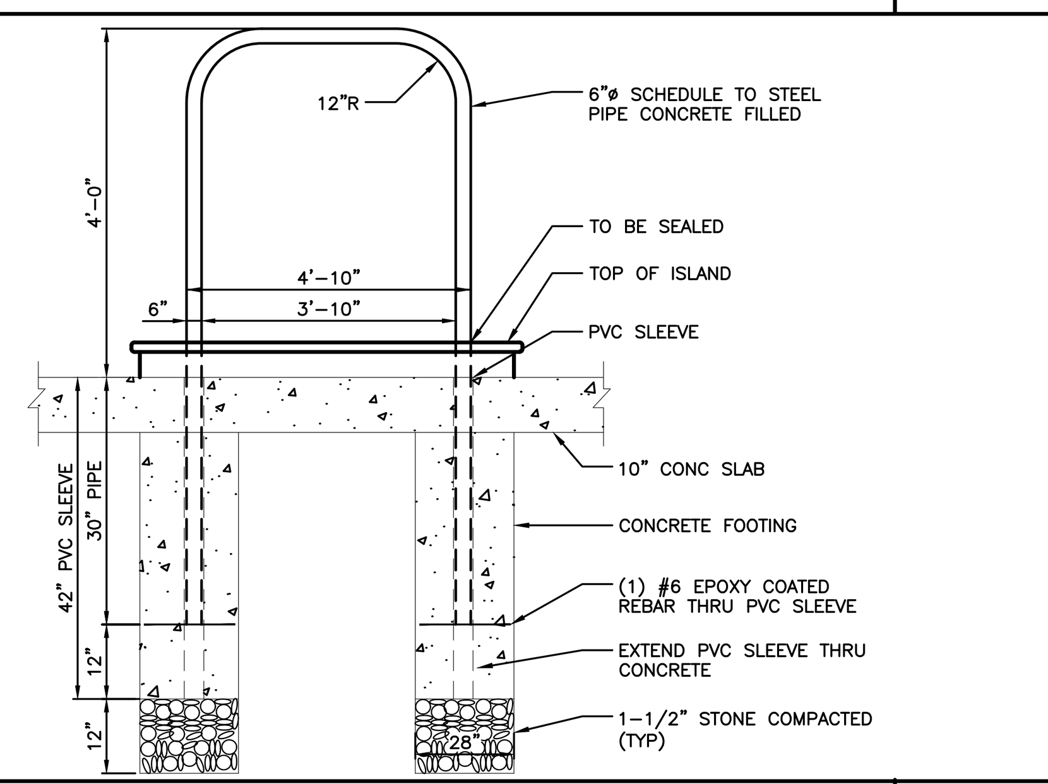
90° PARKING — 22
(DOUBLE STRIPING – CURBED PERIMETER)



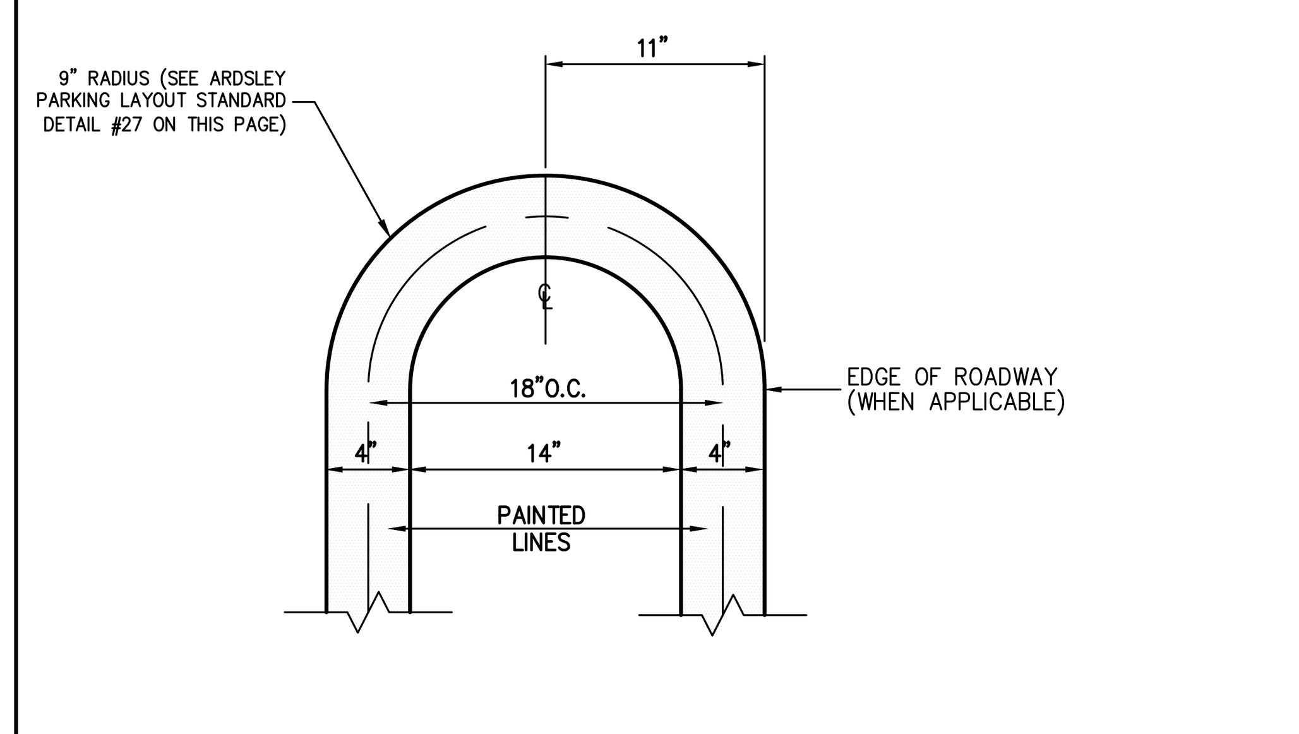


NOTES:
1. METAL FLANGES, CLEATS, BOLTS, SCREWS, ETC. SHALL BE STAINLESS STEEL OR GALVANIZED STEEL.
2. ALL LUMBER TO BE PRESSURE TREATED WITH WOOD PRESERVATIVE FOR IN GROUND USE. ALL LUMBER TO BE #1 GRADE. ALL LUMBER TO BE NATURAL WOOD COLOR.
3. SEE SITE LAYOUT PLANS FOR LOCATION.

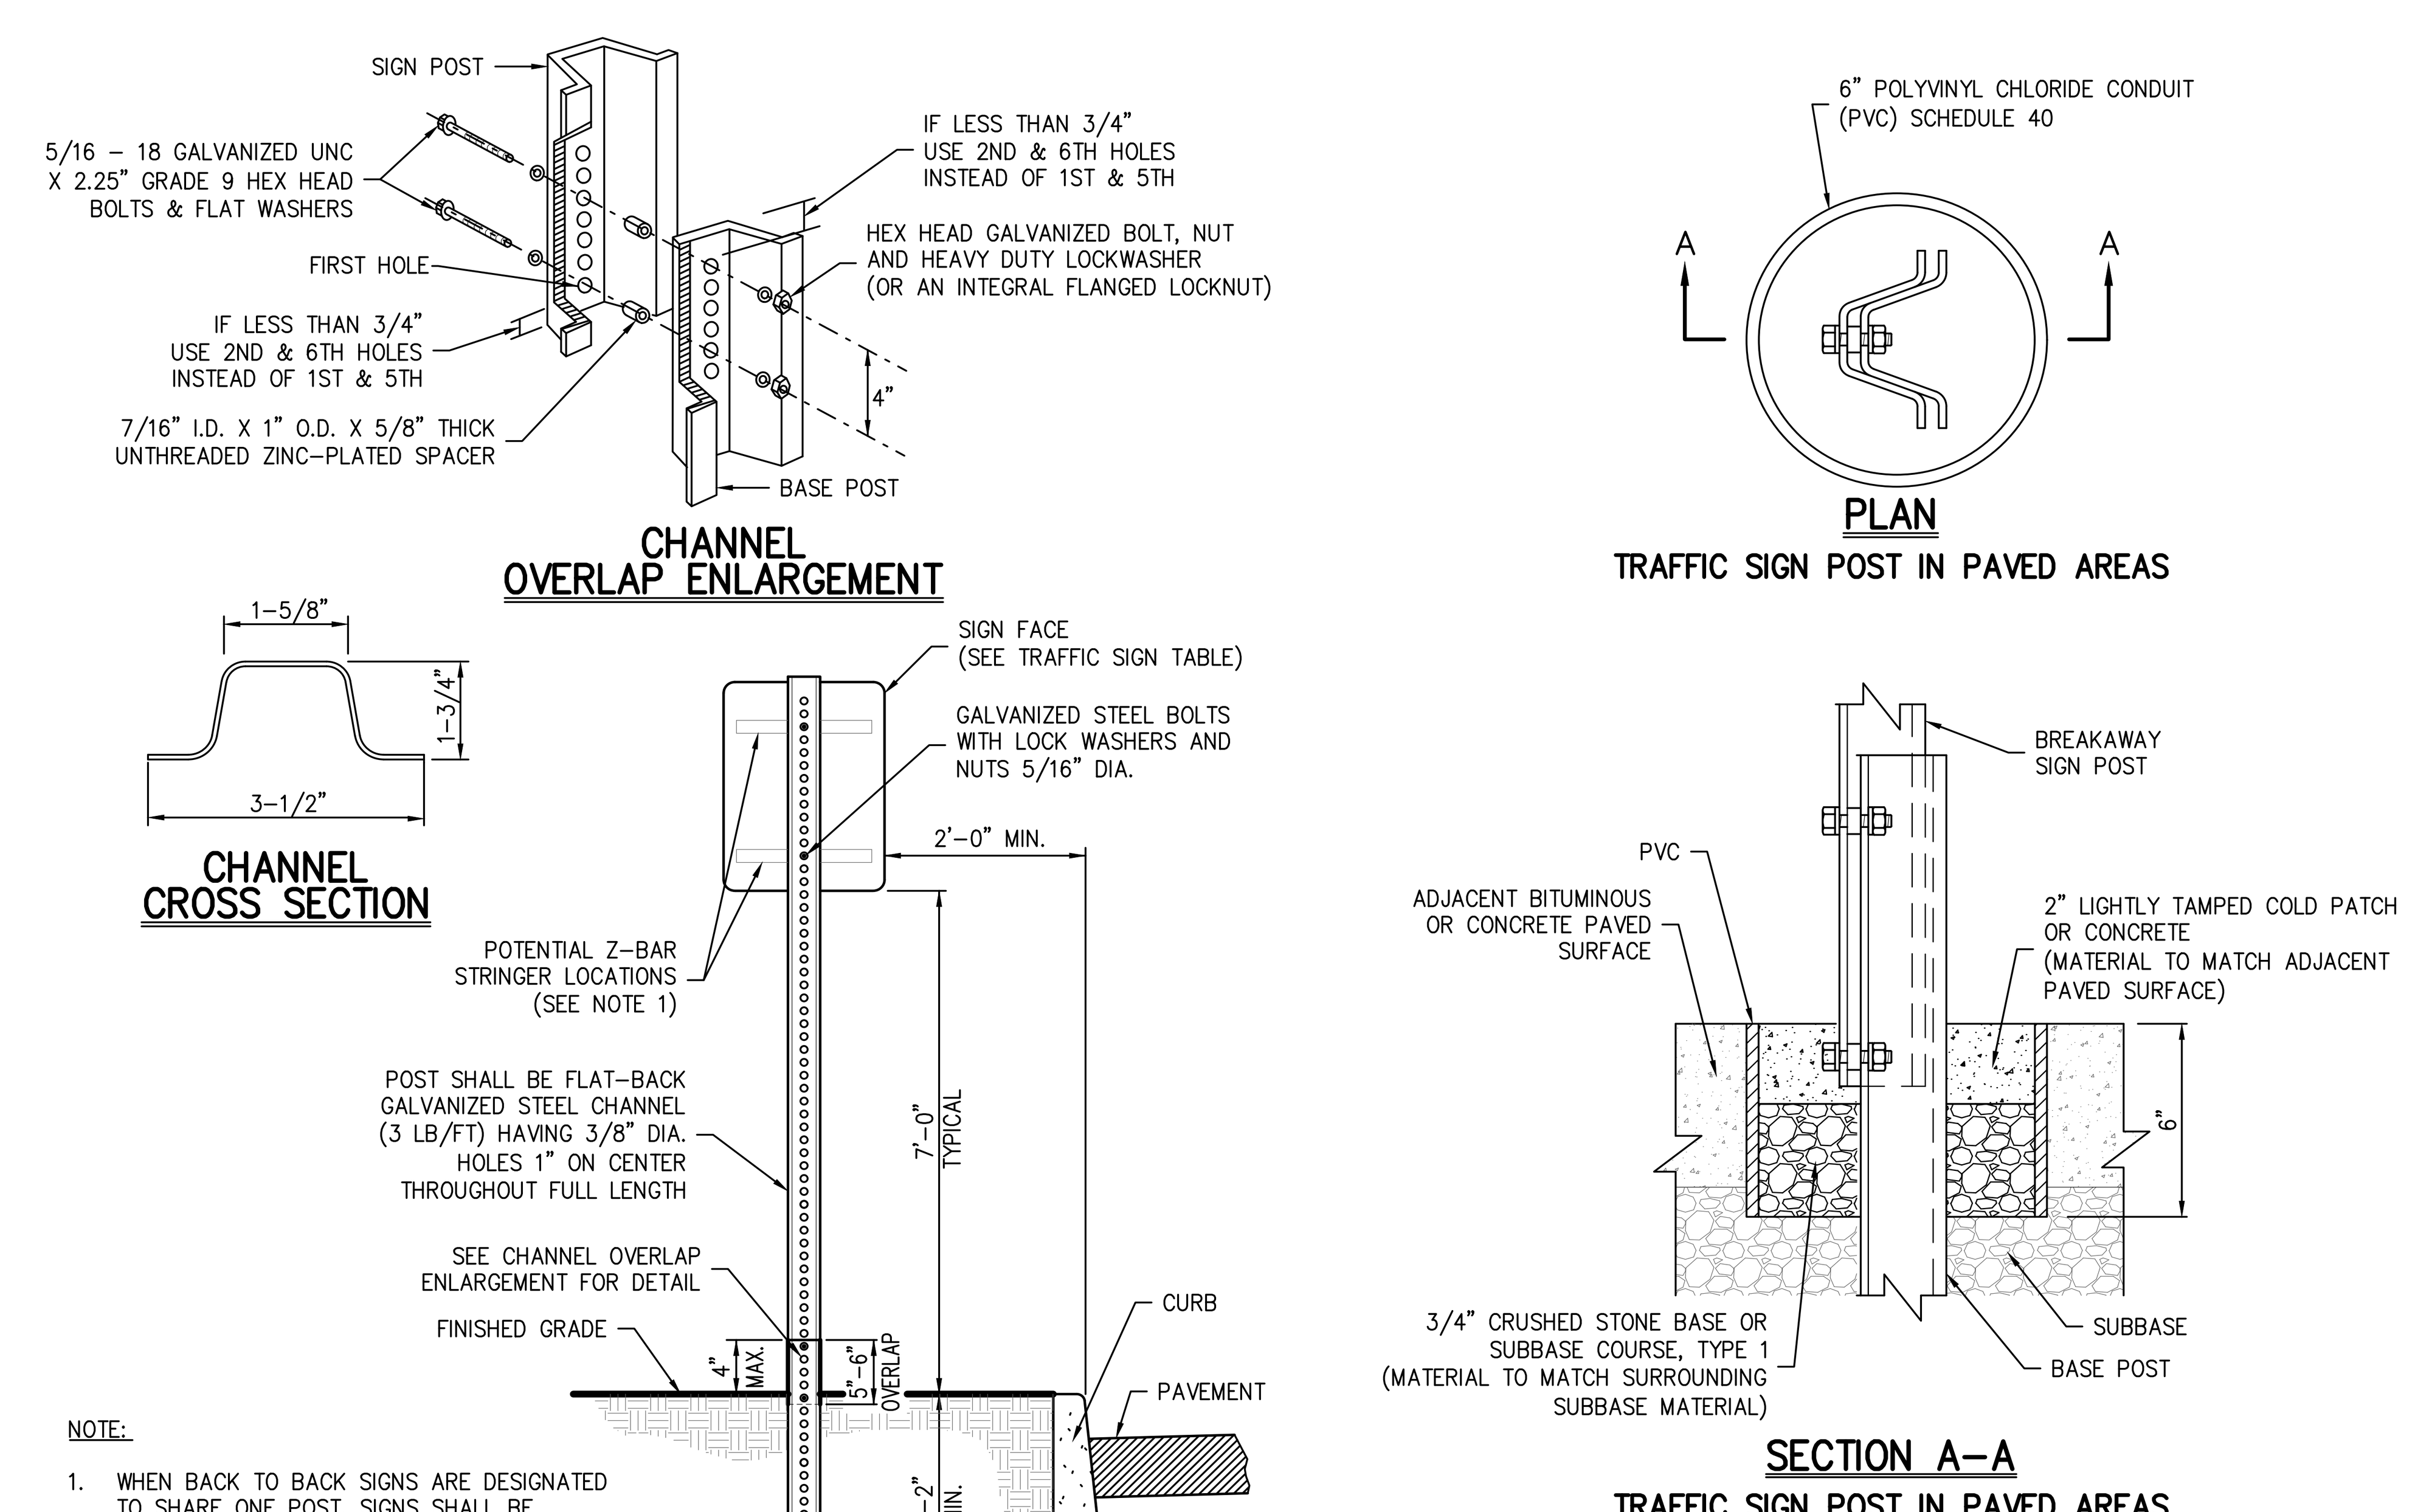
TRASH ENCLOSURE WITH CONCRETE PAD — 24
(WOOD)



"U" TYPE BOLLARDS — 21

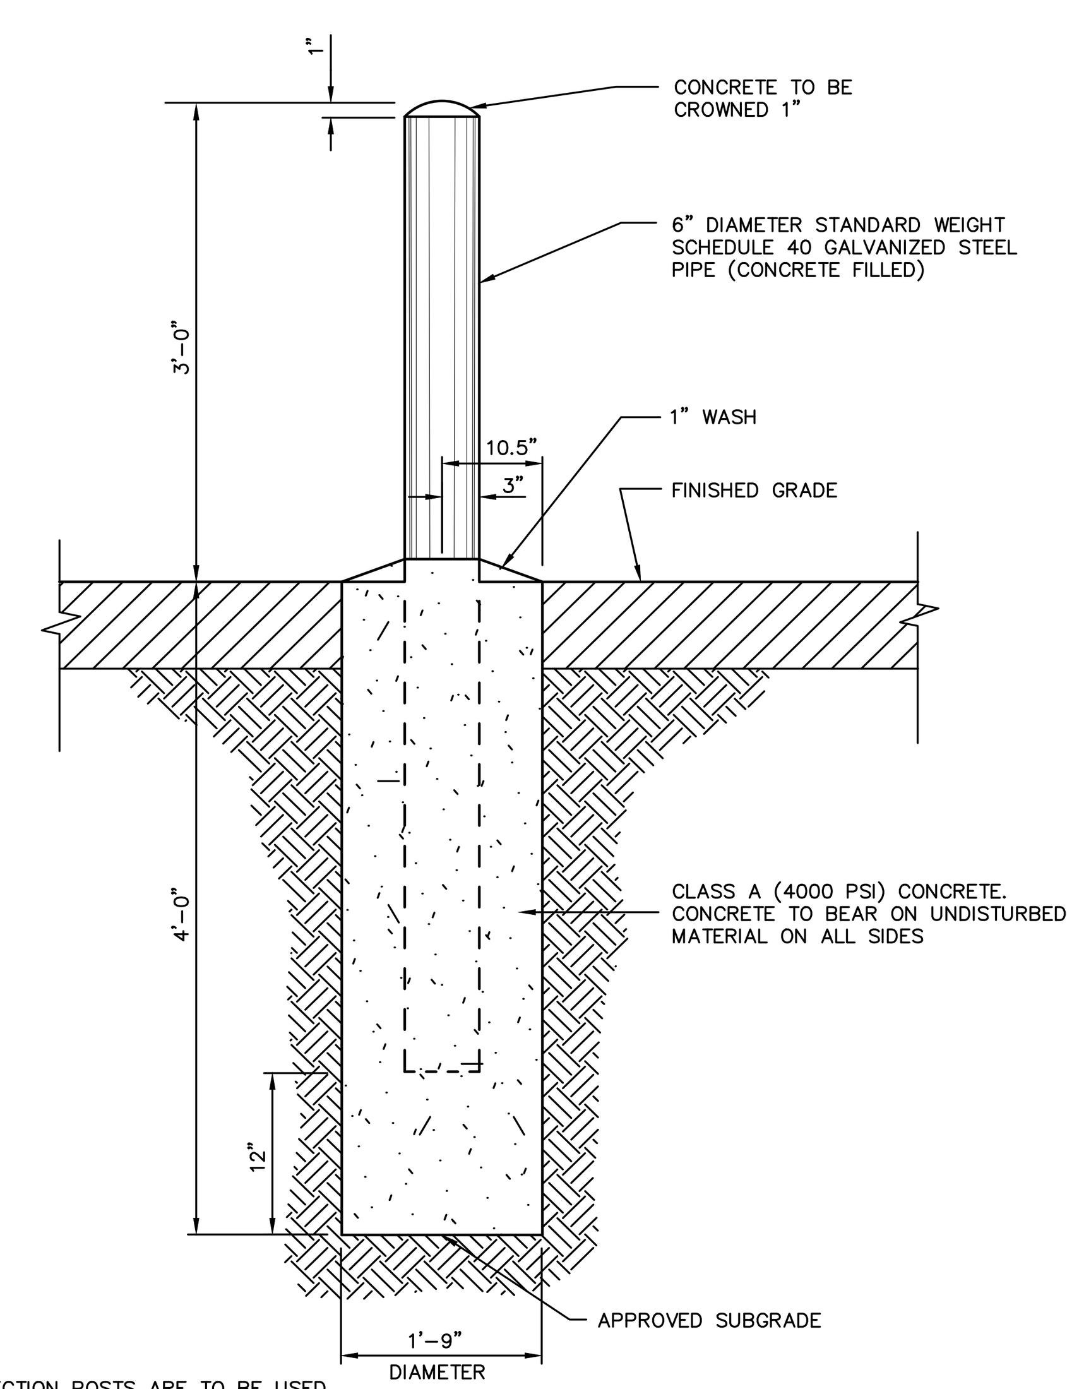


STRIPING END ENLARGEMENT — 23



NOTE:
1. WHEN BACK TO BACK SIGNS ARE DESIGNATED TO SHARE ONE POST, SIGNS SHALL BE AFFIXED TO POST USING ALUMINUM OR STAINLESS STEEL Z-BAR STRINGER.

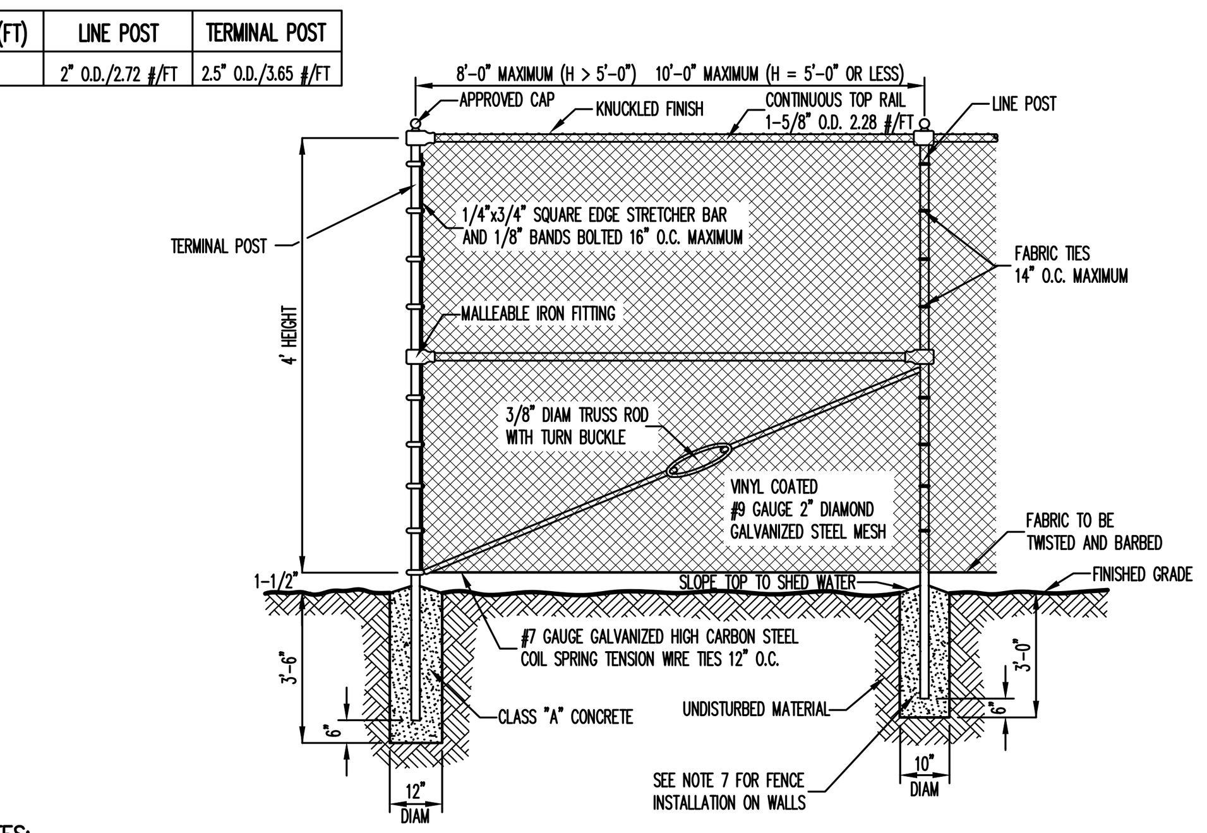
TRAFFIC SIGN POST — 25
(BREAKAWAY STEEL CHANNEL)



NOTES:
1. WHEN PROTECTION POSTS ARE TO BE USED FOR PROTECTION OF HANDICAP PARKING SIGNS OR OTHER TRAFFIC SIGNS, SIGN SUPPORTING POSTS SHALL BE IMBEDDED A MINIMUM OF THREE (3) FEET INTO THE CONCRETE.
2. POST FOR HANDICAP PARKING STALLS SHALL BE PAINTED BLUE AS FOLLOWS:
A. SOLVENT CLEAN TO REMOVE OIL, GREASE AND OTHER CONTAMINANTS.
B. APPLY METAL PRIMER FOR GALVANIZED SURFACES.
C. APPLY TWO (2) FINISH COATS OF APPROVED EXTERIOR PAINT FOR METAL SURFACES.

STEEL PIPE PROTECTION POST — 26

"H" (FT)	LINE POST	TERMINAL POST
4'	2" O.D./2.72 #/FT	2.5" O.D./3.65 #/FT



NOTES:
1. ALL POSTS, RAILS, FABRIC AND ACCESSORIES SHALL BE VINYL COATED. COLOR OF VINYL COATING SHALL BE BLACK.
2. POST AND RAILS SHALL BE STANDARD FULL WEIGHT VINYL COATED GALVANIZED SCHEDULE 40 PIPE MANUFACTURED AND GALVANIZED IN ACCORDANCE WITH ASTM A-120. ALL MATERIALS SHALL BE NEW AND FIRST CLASS AND SHALL NOT INCLUDE RECONDITIONED OR REROLLED PIPE.
3. FITTINGS SHALL BE VINYL COATED MALLEABLE IRON FITTINGS CONFORMING TO THE REQUIREMENTS OF ASTM A-47 GALVANIZED IN ACCORDANCE WITH ASTM A-153.
4. FABRIC SHALL BE 9 GAUGE GALVANIZED 2" MESH, WHICH SHALL BE VINYL CLAD IN CONFORMANCE WITH THE REQUIREMENTS OF AASHTO M-181, TYPE III. VINYL COATING SHALL BE FIRMLY AND CONTINUOUSLY EXTRUSION BONDED TO THE GALVANIZED STEEL WIRE. TOP SELVAGE SHALL HAVE KNUCKLED FINISH.
5. TENSION WIRE SHALL BE VINYL COATED 7 GAUGE MEETING THE REQUIREMENTS OF ASTM A-641 AS MODIFIED HEREIN. THE TENSILE STRENGTH SHALL BE AT LEAST 80,000 PSI WITH A GALVANIZED COATING OF NOT LESS THAN 0.7 OZ. PER SQUARE FOOT.
6. FABRIC TIES SHALL BE MINIMUM 9 GAUGE VINYL COATED GALVANIZED STEEL OR ALUMINUM. MINIMUM SPACING SHALL BE AS FOLLOWS:
   A. 14" O.C. AT LINE POSTS
   B. 24" O.C. AT TOP RAIL
   C. 12" O.C. AT TENSION WIRE
7. WHERE CHAIN LINK FENCE IS TO BE INSTALLED ON WALLS, THE FENCE POSTS SHALL BE IMBEDDED A MINIMUM OF TWELVE (12) INCHES IN THE WALL. NEWLY CONSTRUCTED WALLS SHALL BE PROVIDED WITH PROPER SIZE SLEEVES TO ACCOMMODATE FENCE POSTS. FENCE POSTS SHALL BE SECURELY GROUTED IN PLACE USING AN APPROVED HIGH STRENGTH, NON-SHRINKING, NON-STAINING GROUT.
8. THE CONTRACTOR WILL BE REQUIRED TO SUBMIT SHOP AND ERECTION DRAWINGS INDICATING MATERIALS, SIZES AND DIMENSIONS OF FENCING TO THE OWNER'S FIELD REPRESENTATIVE PRIOR TO ORDERING MATERIALS FOR HIS REVIEW AND APPROVAL.
9. PRIOR TO INSTALLATION OF THE FENCE, THE CONTRACTOR SHALL CHECK THE FENCE LAYOUT WITH THE OWNER'S FIELD REPRESENTATIVE WHO MUST APPROVE THE LAYOUT BEFORE ANY OF THE WORK IS TO BE DONE.

CHAIN LINK FENCE — 27

FREEWIRE   Boost Charger 200 Data Sheet

Boost Charger 200

Ultrafast EV Charging with Integrated Energy Storage

The Boost Charger™ 200 is an ultrafast and flexible DC fast charger for electric vehicles (EVs). The battery-integrated design enables Boost Charger to easily connect to existing electrical infrastructure without costly construction and complex permitting. Boost Charger has a 160 kWh battery capacity with 200 kW output and only 27 kW or less input, making it ready for all EVs including light to heavy duty models.

HEAVY-DUTY

Utrafast Charging: adds up to 200 miles of range in 15 minutes

Dual Charging: provides simultaneous charging and customizable port configurations including CCS1/CCS2 and CHAdeMO

High Power: outputs up to 950 V for charging light to heavy-duty EVs

FLEXIBLE PLATFORM

Plug & Play: battery-integrated design connects to the existing low-voltage grid, enabling cost efficient installation in hours

Small Footprint: space efficient design means no unsightly and expensive electrical infrastructure

Flexible Deployment: easy to relocate depending on charging demand and site

FUTURE-PROOF

Smart & Connected: flexible management platform allows you to integrate charger with your business or any third party charging software

Lower Operating Costs: energy buffering technology limits input from the grid, reducing costly demand charges

Electrification beyond the grid™   www.freewiretech.com

NOTES:

1. ALL PLANT MATERIAL SHALL BE FIRST QUALITY STOCK. PLANTED MATERIAL AND METHODS OF INSTALLATION SHALL CONFORM TO THE AMERICAN NURSERY AND LANDSCAPE ASSOCIATION, AMERICAN STANDARD FOR NURSERY STOCK, LATEST EDITION.
2. ALL AREAS OF THE SITE NOT OCCUPIED BY BUILDING OR PAVEMENT AND NOT SPECIFIED AS BEING PLANTED WITH TREES, SHRUBS OR GROUND COVER SHALL BE LAWN.
3. ALL PLANTING BEDS SHALL BE MULCHED WITH 3" OF BROWN MULCH. MULCH SHALL BE CLEAN, NON-DYED, TOXIC FREE, SHREDDED HARDWOOD.
4. PLANT MATERIALS AS SPECIFIED ON THE DRAWINGS AND DELIVERED TO THE SITE SHALL BE NURSERY GROWN AND CERTIFIED TRUE TO THEIR GENUS, SPECIES AND VARIETY. SUBSTITUTIONS ARE NOT PERMITTED WITHOUT THE PROJECT LANDSCAPE ARCHITECTS WRITTEN APPROVAL.
5. ALL LANDSCAPING SHALL CONTINUE TO BE MAINTAINED IN A HEALTHY GROWING CONDITION THROUGHOUT THE DURATION OF THE PROJECT. ANY PLANTING NOT SO MAINTAINED SHALL BE REPLACED WITH NEW PLANTS AT THE BEGINNING OF THE NEXT, IMMEDIATELY FOLLOWING, GROWING SEASON.
6. ALL TREES AND SHRUBS SHALL BE PRUNED AND SHAPED AND BE SUBJECT TO THE APPROVAL OF THE PROJECT LANDSCAPE ARCHITECT AND GOVERNMENTAL AUTHORITIES HAVING JURISDICTION.
7. PLANTING STOCK SHALL BE WELL-BRANCHED AND WELL-FORMED, SOUND, VIGOROUS, HEALTHY, FREE FROM DISEASE, SUN-SCALE, WINDBURN, ABRASION, AND HARMFUL INSECTS OR INSECTS EGGS; AND SHALL HAVE HEALTHY, NORMAL UNBROKEN ROOT SYSTEMS. DECIDUOUS TREES AND SHRUBS SHALL BE SYMMETRICALLY DEVELOPED, OF UNIFORM HABIT OF GROWTH, WITH STRAIGHT TRUNKS OR STEMS, AND FREE FROM OBJECTIONABLE DISFIGUREMENTS. EVERGREEN TREES AND SHRUBS SHALL HAVE WELL-DEVELOPED SYMMETRICAL TOPS WITH TYPICAL SPREAD OF BRANCHES FOR EACH PARTICULAR SPECIES OR VARIETY. ONLY VINES AND GROUND COVER PLANTS WELL ESTABLISHED IN REMOVAL CONTAINERS, INTEGRAL CONTAINERS, OR FORMED HOMOGENEOUS SOIL SECTIONS SHALL BE USED. PLANTS SHALL BE GROWN UNDER CLIMATIC CONDITIONS SIMILAR TO THOSE IN THE LOCALITY OF THE PROJECT.
8. ALL STOCK SHALL BE BALLED AND BURLAPPED OR CONTAINER GROWN STOCK, UNLESS OTHERWISE SPECIFIED. BAREROOT STOCK OF ANY KIND IS UNACCEPTABLE UNLESS SPECIFIED.
9. ALL PLANTING BEDS, LAWNS AND LANDSCAPED AREAS SHALL RECEIVE A MINIMUM 4" THICK LAYER OF TOPSOIL, UNLESS OTHERWISE SPECIFIED.

Honorable Nancy Kaboolian, Mayor
and Members of the Board of Trustees
Village of Ardsley
507 Ashford Avenue
Ardsley, New York 10502

Re: Application for Site Plan Approval at 657 Saw Mill River Road (a/k/a Parcel No. 6.50-35 Lots 8, 9, 10, and 11)

Dear Mayor Kaboolian and Members of the Board of Trustees:

This firm represents Thornwood Four Corners LLC (the "Applicant") in connection with its proposed redevelopment of the property located at 657 Saw Mill River Road in Ardsley, designated on the tax assessment map of the Town of Greenburgh as Parcel No. 6.50-35 Lots 8, 9, 10, and 11 (the "Site"). The Applicant is the lessee of the Site and, with the permission of the owners, is seeking site plan approval from this Board in accordance with Chapter 167 of the Village of Ardsley Zoning Code ("Zoning Code") to permit the construction of a modern gas station, a convenience store with associated parking, and electric charging stations (the "Project").

The Property

The Property consists of a total of 0.522 acres (22,732 square feet) at the corner of Ridge Road and Saw Mill River Road, just south of the intersection with Ashford Avenue. It is located within the B-1 Zoning District.

The Property was previously improved with a gas station and a building containing a snack shop, office, and bays for the servicing of automobiles. The service building has since been demolished and the Site is now vacant. In accordance with the Resolution of the Village of Ardsley Zoning Board of Appeals dated January 24, 2018, the gas station use is a pre-existing non-conforming use of the Site, has not been abandoned, and may be reinstated. Retail stores and shops are principally permitted uses in the B-1 Zoning District.

Due to certain identified spills at the Site and the installation of new tanks, the New York State Department of Environmental Conservation ("NYSDEC") now oversees the cleanup and remediation of the Site under a NYSDEC Consent Order. The status of cleanup efforts is set forth in a letter from Applicant's consultant submitted herewith.

The Current Application and Prior Review

The Applicant proposes to re-construct a gas station at the Site, with an efficient layout consisting of three diagonal pump islands (each accommodating two gas dispensers) with a canopy, a 2,210 square foot convenience store, four (4) electric car charging stations, and eight (8) parking spaces. The Applicant has eliminated the previously existing servicing of vehicles at the Site. The updated plan submitted herewith also incorporates attractive landscaping and sidewalk improvements, and improves traffic circulation at the Site.

By way of background, the Applicant first made an application for redevelopment of the Property in September 2020. On November 16, 2020, the Village Board declared itself Lead Agency under the State Environmental Quality Review Act ("SEQRA"), and referred the Project to the Village of Ardsley Planning Board and Board of Architectural Review ("BAR") for review and report or recommendation. The Applicant met with the Planning Board on multiple occasions, which culminated in a Memorandum from the Planning Board to the Village Board. The BAR communicated its favorable impression of the proposed design and materials and issued a letter dated June 28, 2023 to the Village Board with its comments. At its meeting of September 18, 2023, this Board opened the public hearing on site plan review of the proposed development. The Applicant presented the Project to this Board and the Board heard public comment. Thereafter, at its meeting on October 16, 2023, the Board again heard and received public comment, and directed the Applicant to work with Village staff and consultants to prepare an updated site plan submission based on the preferred design of the Site.

The Applicant has updated the Site Plan, Traffic Study, and the Stormwater Pollution Prevention Plan to incorporate comments received to date from the Village, and from the New York State Department of Transportation ("NYSDOT"). The proposed plans reflect traffic circulation improvements, reduction in impervious surfaces, and practices that enhance stormwater quality and reduce runoff from the Site associated with the Project, which together constitutes a substantial improvement over the conditions of the previously existing gas station.

In particular, as contemplated in the Stormwater Pollution Prevention Plan ("SWPPP"), stormwater runoff from the majority of the Site will flow overland into the drainage infrastructure, collecting sediment and any pollutants on its way from the driveway area to the intersection of Saw Mill River Road and Ridge Road. Stormwater runoff from the remaining portion of the Site would flow overland into the Bramble Brook. Notably, all stormwater runoff flowing into the Bramble Brook will only be from landscaped areas and a small portion from a sidewalk area. Stormwater runoff will be treated in either an underground sand filter, a water quality structure, or both. This runoff will also receive pretreatment in the sumps of the drain inlets (removing floatables, etc.) and in the sediment basin included in the underground sand filter that was not accounted for in the stormwater design. The perimeter trench drains will target and collect runoff from the gas pump areas and will convey this runoff into the sand filter. The Village, the owners,

and the Applicant will enter into a stormwater maintenance agreement to ensure continued maintenance of the proposed stormwater mitigation systems through the lifetime of the Project.

From a traffic circulation perspective, the initial site plan proposed to maintain all three existing two-way driveways (two along Route 9A and one along Ridge Road). Based on comments from the NYSDOT, the driveways along Route 9A now provide a one-way circulation with the southern driveway being an ingress only driveway and the northern driveway being an egress only driveway. Based on comments from the Village and its consultants, the Ridge Road driveway will be closed and the northern driveway along Route 9A will be limited to right turn exit only movements. These modifications improve traffic circulation by managing access and restricting turning movements to reduce conflict points.

Finally, the addition of four (4) publicly available EV chargers to the site will advance the goals of the New York State Climate Leadership and Community Protection Act ("The Climate Act"), which envisions the electrification of the transportation system through the expanded installation of EV charging infrastructure. The Applicant will offer this amenity to electric car owners, while continuing to serve the existing demands of non-electric vehicles.

Required Submission

In support of the application and in accordance with the Village's requirements, we respectfully submit the following materials:

1. A completed full Environmental Assessment Form (EAF) last revised December 4, 2023;
2. Letter from Environmental Consulting and Management Services, Inc. (ECMS), dated November 30, 2023 regarding status of NYSDEC remediation;
3. Traffic Study dated March 22, 2021, last revised November 30, 2023, prepared by JMC.
4. Stormwater Pollution Prevention Plan last revised December 1, 2023, prepared by JMC.
5. A set of drawings consisting of the following sheets:

Drawing No.	Title	Prepared By	Dated or Last Revised
C-000	Cover Sheet	JMC Site Development Consultants ("JMC")	12/1/2023
C-010	Existing Conditions Map and Site Removals Plan	JMC	12/1/2023

C-906	Site Details	JMC	12/1/2023
L-100	Site Landscaping Plan	JMC	12/1/2023

The Applicant intends to submit the aforementioned plans and final design details to the BAR for its review.

Conclusion

We respectfully request that this matter be placed on the December 18, 2023 agenda of the Board of Trustees for site plan review. In the interim, please feel free to contact me if you have any questions or if you would like any additional information.

Thank you for your consideration. We look forward to meeting with the Planning Board at its next available opportunity.

Very truly yours,

DIANA B. KOLEV

Re: Thornwood Four Corners, LLC
Westchester County Petroleum Bulk Storage Site Number 3-137758
NYSDEC Consent Order Case No. R3-1115-10-17
Open NYSDEC Spill Number 16-00700
657 Saw Mill River Road, Ardsley, New York

Dear Mr. Korn and whomever this may concern,

Environmental Consulting and Management Services, Inc. (ECMS) has been hired by Thornwood Four Corners, LLC to manage and supervise environmental issues at the mentioned site. This letter, written at JMC's request, is to update interested parties about the cleanup process. ECMS is working with NYSDEC and WCDOH to handle the spill conditions. NYSDEC approved ECMS' cleanup plan on August 22, 2018. ECMS sent a Tank Closure and Remedial Excavation Summary Report to NYSDEC in 2022 detailing all the cleanup activities at the site. NYSDEC allows the redevelopment of PBS facilities during cleanup under the supervision of environmental consultants who follow the agreements with the NYSDEC.

Thornwood Four Corners, LLC, the tenant, and Thorpe-McCartney Family Partnership, the property owner, are the parties responsible as per the Consent Order. ECMS has been documenting and supervising the cleanup as part of the spill cleanup. Due to the cleanup actions, WCDOH and NYSDEC approved the PBS installation activities in 2020. The property can be redeveloped with proper notice to NYSDEC and WCDOH as per the Consent order. The next steps are to install monitoring wells and monitor the site to ensure the onsite excavation and water treatment were adequate to clean up the site. ECMS will summarize all actions in a "Remedial Action Report" (RAR) which will be sent to NYSDEC to address the current spill conditions.

Currently, ECMS needs to install wells and report on the site's soil and groundwater conditions to NYSDEC in a RAR. As per the consent order, these actions will not prevent or limit the site's redevelopment.

For any questions about this letter, please contact the person below, either by email at harrys@ecmsny.com or by phone at (203)241-1030.

Best regards,
Environmental Consulting & Management Services, Inc.

Harry Sudwischer
Director of Remediation and Spills

I. INTRODUCTION

This Stormwater Pollution Prevention Plan has been prepared for the 0.53-acre Gas Station Site, located in the Village of Ardsley, Westchester County, New York (hereinafter referred to as the "Site"). The site is bordered by the Bramble Brook and Ashford Avenue to the north, Ridge Road to the south, wooded area to the east, and Saw Mill River Road to the west. The development has been designed in accordance with the following:

- New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit No. GP-0-20-001, effective January 29, 2020.
- Chapter 170 & Chapter 171, titled "Storm Sewers" & "Stormwater Management and Erosion and Sediment Control" of the Ardsley Zoning Code.
- New York State Stormwater Design Manual, dated January 2015.

Site work on this project includes demolition of the existing gas station convenience store building, installation of six new gas pumps with canopy and subsurface gas tanks and installation of stormwater mitigation systems that will be further detailed in this report. A 2,210 square foot convenience store building will be installed with a total of 12 proposed parking spaces (not including the six pump spaces) with associated driveway, sidewalk, landscape and stormwater modifications.

II. STORMWATER MANAGEMENT PLANNING

In order to be eligible for coverage under the NYSDEC SPDES General Permit No. GP-0-20-001 for Stormwater Discharges from Construction Activities, the Stormwater Pollution Prevention Plan (SWPPP) includes stormwater management practices (SMP's) from the publication "New York State Stormwater Management Design Manual," last revised January 2015.

A Stormwater Pollution Prevention Plan has been prepared for this project because it is a construction activity that involves:

- Construction activity that discharges into an impaired watercourse.

The proposed stormwater facilities have been designed such that the quantity and quality of stormwater runoff during and after construction are not adversely altered or are enhanced when compared to pre-development conditions.

Based on the GIS information provided by the website of the New York State Office of Parks, Recreation and Historic Places, the site does not contain, nor is it immediately adjacent to any properties listed on the State or National Register of Historic Places.

The Six Step Process for Stormwater Site Planning and Practice Selection

Stormwater management using green infrastructure is summarized in the six-step process described below. The six-step process was adhered to when developing this SWPPP. Information is provided in this SWPPP which documents compliance with the required process as follows:

Step 1: Site Planning

Implement planning practices that protect natural resources and utilize the hydrology of the site. Strong consideration must be given to reducing impervious cover to aid in the preservation of natural resources including protecting natural areas, avoiding sensitive areas, and minimizing grading and soil disturbance.

Step 2: Determine Water Quality Treatment Volume (WQv)

Determine the required WQv for the site based on the site layout, impervious areas, and sub-catchments. This initial calculation of WQv will have to be revised after green infrastructure techniques are applied. The following method has been used to calculate the WQv.

- **90% Rule -** According to the New York State Stormwater Design Manual, Section 4.1, the water quality volume is determined from the 90% rule. The method is based on 90% of the average annual stormwater runoff volume which must be provided due to impervious surfaces. The Water Quality Volume (denoted as the WQv) is designed to improve water quality sizing to capture and treat 90% of the average annual stormwater runoff volume. The WQv is directly related to the amount of impervious cover created at a site. The average rainfall storm depth for 90% of storms in New York State in one year is used to calculate a volume of runoff. The rainfall depth depends on the location of the site within the state. From this depth of rainfall, the required water quality volume is calculated.

The project is a redevelopment and therefore will comply with the strategies outlined within Chapter 9: Redevelopment Projects of the Design Manual. There are different options to control water quality depending on the redevelopment.

The plan proposes that a minimum of 25% of the water quality volume (WQv) from the disturbed area is captured and treated by the implementation of standard and alternative practices. When utilizing structural stormwater management practices, these practices should be targeted to treat areas with the greatest pollutant generation potential (e.g. parking areas, service stations, etc).

Proposed standard SMP's will effectively treat 100% of the 1-year storm for all existing and new impervious areas and the proposed alternative SMP's will also treat 100% of the 1-year storm for all existing impervious areas which is above and beyond the water quality requirements for Redevelopment Projects.

Step 3: Runoff Reduction Volumes (RRv) by Applying Green Infrastructure Techniques and Standard SMP's

RRv is not required for this project since it is a redevelopment.

Step 4: Determine the minimum RRv Required

The minimum RRv is calculated similar to the WQV. However, it is determined using only the new impervious cover and accounts for the hydrologic soil group present. In no case shall the runoff reduction achieved from the newly constructed impervious area be less than the minimum runoff reduction volume (RRv_{min}).

As stated above, RRv is not required for this project since it is a redevelopment.

Step 5: Apply Standard Stormwater Management Practices to Address Remaining Water Quality Volume

Apply the standard SMP's to meet additional water quality volume requirements that cannot be addressed by applying the green infrastructure techniques. The standard SMP's with RRv capacity must be implemented to verify that the RRv requirement has been met.

- **Infiltration Practices –** A subsurface sand filter is proposed to treat and retain runoff from the portion of the site where the gas pumps are located. A perimeter trench drain will collect runoff from this area and convey the stormwater into the sand filter.

Step 6: Apply Volume and Peak Rate Control Practices to Meet Water Quantity Requirements

The Channel Protection Volume (CPv), Overbank Flood Control (Qp) and Extreme Flood Control (Qf) must be met for the plan to be completed. This is accomplished by using practices such as infiltration basins, dry detention basins, etc. to meet water quantity requirements. The following standards must be met:

1. **Stream Channel Protection (CPv)**

Stream Channel Protection Volume Requirements (CPv) are designed to protect stream channels from erosion. In New York State this goal is accomplished by providing 24-hour extended detention of the one-year, 24-hour storm event, remaining from runoff reduction. Reduction of runoff for meeting stream channel protection objectives, where site conditions allow, is encouraged and the volume reduction achieved through green infrastructure can be deducted from CPv. Trout waters may be exempted from the 24-hour extended detention requirement, with only 12 hours of extended detention required to meet this criterion. Detention time may be calculated using either a center of mass method or plug flow calculation method.

- CPv for a redevelopment project is not required if there is no increase in impervious area or changes to hydrology that increase the discharge rate. This criterion, as defined in Chapter 4 of New York State Stormwater Design Manual, is not based on a pre- versus post-development comparison. However, for a redevelopment project this requirement is relaxed. If the hydrology and hydraulic study shows that the post-construction 1-year 24-hour discharge rate and velocity are less than or equal to the pre-construction discharge rate, providing 24-hour detention of the 1-year storm to meet the channel protection criteria is not required.

2. **Overbank Flood (Qp) which is the 10 year storm.**

Overbank control requires storage to attenuate the post development 10-year, 24-hour peak discharge rate (Qp) to predevelopment rates.

The overbank flood control requirement (Qp) does not apply in certain conditions, including:

- The site discharges directly tidal waters or fifth order (fifth downstream) or larger streams.

- A downstream analysis reveals that overbank control is not needed.

3. Extreme Storm (Qf) which is the 100-year storm.

100 Year Control requires storage to attenuate the post development 100-year, 24-hour peak discharge rate (Qf) to predevelopment rates.

The 100-year storm control requirement can be waived if:

- The site discharges directly tidal waters or fifth order (fifth downstream) or larger streams.

- Development is prohibited within the ultimate 100-year floodplain

- A downstream analysis reveals that 100-year control is not needed.

- If redevelopment results in no increase in impervious area or changes to hydrology that increase the discharge rate from the site the hundred-year criteria does not apply.

Based on the foregoing, this project is eligible for coverage under NYSDEC SPDES General Permit No. GP-0-20-001.

III. STUDY METHODOLOGY

Runoff rates were calculated based upon the standards set forth by the United States Department of Agriculture Natural Resources Conservation Service Technical Release 55, Urban Hydrology for Small Watersheds (TR-55), dated June 1986. The methodology set forth in TR-55

considers a multitude of characteristics for watershed areas including soil types, soil permeability, vegetative cover, time of concentration, topography, rainfall intensity, ponding areas, etc.

The 1-, 10-, and 100-year storm recurrence intervals were reviewed in the design of the stormwater management facilities (see Appendices A & B Existing/Proposed Hydrologic Calculations).

Anticipated drainage conditions were analyzed considering the rate of runoff which will result from the construction of buildings, parking areas and other impervious surfaces associated with the site development.

Base Data and Design Criteria

For the stormwater management analysis, the following base information and methodology were used:

1. The site drainage patterns, and outfall facilities were reviewed by JMC personnel for the purpose of gathering background data and confirming existing mapping of the watershed areas.

2. A Natural Resource and Existing Drainage Area Map was developed from the topographical survey. The drainage area map reflects the existing conditions within and around the project area.

3. A Proposed Drainage Area Map was developed from the proposed grading design superimposed over the topographical survey. The drainage area map reflects the proposed conditions within the project area and the existing conditions to remain in the surrounding area.

4. The United States Department of Agriculture (USDA) Web Soil Survey of the site available on its website at http://websoilsurvey.nrcd.usda.gov.

5. Soil Survey of Putnam and Westchester Counties, 1994.

6. The United States Department of Agriculture Natural Resources Conservation Service National Engineering Handbook, Section 4 - Hydrology", dated March 1985.

7. The United States Department of Agriculture Natural Resources Conservation Service Technical Report No. 55, Urban Hydrology for Small Watersheds (TR-55), dated June 1986.

8. United States Department of Commerce Weather Bureau Technical Release No. 40 Rainfall Frequency Atlas of the United States.

The time of concentration was calculated using the methods described in Chapter 3 of TR-55, Second Edition, June 1986. Manning's kinematics wave equation was used to determine the travel time of sheet flow. The 2-year 24-hour precipitation amount of 3.43 inches was used in the equation for all storm events. The travel time for shallow concentrated flow was computed using Figure 3-1 and Table 3-1 of TR-55. Manning's Equation was used to determine the travel time for channel reaches.

9. All hydrologic calculations were performed with the Bentley PondPack software package version 10.0.

10. All hydraulic calculations were performed with the Civil 3D Storm Sewer Analysis, software package version 13.2.

11. The New York State Stormwater Management Design Manual, revised January 2015.

12. New York Standards and Specifications for Erosion and Sediment Control, November 2016.

13. The storm flows for the 1-, 10-, & 100-year recurrence interval storms were analyzed for the total watershed areas. The Type III distribution design storm for a 24-hour duration was used and the mass rainfall for each design storm was taken from the Extreme Precipitation in New York & New England developed by the Natural Resource Conservation Service (NRCS) and the Northeast Regional Climate Center (NRCC) as follows:

24 Hour Rainfall Amounts

Design Storm Recurrence Interval	Inches of Rainfall
1 Year	2.82
10 Year	5.07
100 Year	8.93

IV. EXISTING CONDITIONS

The approximately half acre property was the location of a former gas station and repair shop contained within a 2,370 square foot building with 2 gasoline pump islands (4 fueling positions). The existing building and gasoline pump islands are currently removed from the property. The Applicant proposes to construct a 2,210 square foot convenience store with a gasoline filling station. The redevelopment proposes 3 gasoline pump islands (6 fueling positions). The majority of the site did consist of Impervious Coverage. A large portion of the site drains towards the south while the northern portion of the site drains to the Bramble brook water course. The entire site is located with the Saw Mill River drainage basin. After stormwater runoff exits the project site, it flows to the Saw Mill River.

The following natural features, conservation areas, resource areas and drainage patterns of the project site have been identified and utilized to develop Drawing DA-1 "Existing Drainage Area Map" which is included in Appendix F:

- Wetlands (jurisdictional, wetland of special concern)
- Waterways (major, perennial, intermittent, springs)
- Buffers (stream, wetland, forest, etc.)
- Floodplains
- Vegetative cover
- Critical areas
- Topography (contour lines, existing flow paths, steep slopes, etc.)
- Soil (hydrologic soil groups, highly erodible soils, etc.)

Based on the USDA Web Soil Survey, all on-site soils belong to hydrological group D. The soil types, boundaries and drainage areas/designations are depicted on Drawing DA-1 within Appendix F.

One Design Line (DL-1) was identified for comparing peak rates of runoff and runoff volumes under existing and proposed conditions. Two separate drainage areas were identified in existing conditions based on the existing drainage divides at the site. The numbers included in the name of each drainage area correspond to the Design Line they drain towards.

The following is a description of each of the drainage areas analyzed in the existing conditions analysis:

Existing Drainage Area 1A (EDA-1A) is 0.558 acres in size and contains the majority of the Site and portions off-site also. It is located along Saw Mill River Road and Ridge Road. This area consists of pavement, the footprint of the former gas station building, and former entrance driveways. This drainage area drains in the southerly direction towards the intersection of Saw Mill River Road and Ridge Road into existing drainage infrastructure.

The Curve Number (CN) and Time of Concentration (Tc) for this drainage area are 92 and 5 minutes, respectively. Refer to Drawing DA-1 in Appendix F.

Existing Drainage Area 1B (EDA-1B) is 0.050 acres in size and is located on the Northern portion of the site along the Bramble Brook which is south of Ardsley Road. This area consists of vegetated areas and drains to the Bramble Brook which eventually discharges to the Saw Mill River.

The Curve Number (CN) and Time of Concentration (Tc) for this drainage area are 70 and 5 minutes, respectively. Refer to Drawing DA-1 in Appendix F.

The peak rates of runoff to the design points from the drainage areas for each storm are shown in the table below:

Table 1
Summary of Peak Rates of Runoff in Existing Conditions
(Cubic Feet per Second)

Storm Recurrence Interval	DP-1
1 year	1.15
10 year	2.34
100 year	4.37

The volumes of runoff to each design point are shown in the table below, as well as the total volume of runoff produced by the entire site.

Table 2
Summary of Volumes of Runoff in Existing Conditions
(Cubic Feet)

Storm Recurrence Interval	DP-1
1 year	4,147
10 year	8,803
100 year	17,094

V. PROPOSED CONDITIONS

Site work on this project includes demolition of the existing gas station convenience store building, installation of six new gas pumps with canopy and subsurface gas tanks and installation of stormwater mitigation systems that will be further detailed in this report. A 2,210 square foot convenience store building will be installed with a total of 12 proposed parking spaces (not including the six pump spaces) with associated driveway, sidewalk, landscape and stormwater modifications. The improvements also include a proposed subsurface sand filter to treat runoff from the site. The proposed improvements will result in a decrease in impervious coverage which will allows the peak rates and volumes of stormwater runoff to be attenuated during the 1, 10 and 100 year rainfall events.

This section describes the design and analysis of the proposed conditions used to demonstrate that the SWPPP meets the requirements of the SPDES General Permit.

The Six Step Process For Stormwater Site Planning and Practice Selection

Step 1: Site Planning

The following practices and site features were incorporated in the site design:

- Preserving hydrology - Maintaining drainage divides
- Waterways (major, perennial, intermittent, springs) – The location, setback, cross section, etc. of the existing waterway has been maintained.
- Critical areas have been preserved.
- Topography (contour lines, existing flow paths, steep slopes, etc.) has been maintained or disturbed to the minimum extent practicable.
- Soil (hydrologic soil groups, highly erodible soils, etc.)
- Bedrock, significant geology features have been accounted for.

Step 2: Determine Water Quality Treatment Volume (WQv)

The following method has been used to calculate the WQv.

- **90% Rule -** According to the New York State Stormwater Design Manual, Section 4.1, the water quality volume is determined from the 90% rule. The method is based on 90% of the average annual stormwater runoff volume which must be provided due to impervious surfaces. The Water Quality Volume (denoted as the WQv) is designed to improve water quality sizing to capture and treat 90% of the average annual stormwater runoff volume. The WQv is directly related to the amount of impervious cover created at a site. The average rainfall storm depth for 90% of storms in New York State in one year is used to calculate a volume of runoff. The rainfall depth depends on the location of the site within the state. From this depth of rainfall, the required water quality volume is calculated.

The project is a redevelopment and therefore will comply with the strategies outlined within Chapter 9: Redevelopment Projects of the Design Manual. There are different options to control water quality depending on the redevelopment.

The proposed stormwater management practices will effectively treat 100% of the 1-year storm for all impervious areas on-site which is consistent with the requirements for Redevelopment Projects.

Step 3: Runoff Reduction Volumes (RRv) by Applying Green Infrastructure Techniques and Standard SMP's

RRv is not required because this project is a redevelopment.

Step 4: Determine the minimum RRv Required

RRv is not required because this project is a redevelopment.

Step 5: Apply Standard Stormwater Management Practices to Address Remaining Water Quality Volume

- **FILTERING PRACTICES**

Underground Sand Filter (F-2)

Description

A filtering practice that treats stormwater as it flows through underground settling and filtering chambers.

Non Standard/Alternative SMP's to Address Remaining Water Quality Volume (for Redevelopment Projects)

- **Hydrodynamic Separators**

Step 6: Apply Volume and Peak Rate Control Practices to Meet Water Quantity Requirements

Underground Sand Filter (F-2)

Description

A filtering practice that treats stormwater as it flows through underground settling and filtering chambers.

All practices exceed the required elements of SMP criteria as outlined in Chapter 6 of the NYS Stormwater Management Design Manual. A summary of each category is provided below.

1. Feasibility – Stormwater practices are designed based upon unique physical environmental

considerations noted in the NYS Stormwater Management Design Manual (NYSSMDM).

2. Conveyance – The design conveys runoff to the designed stormwater practice in a manner that is safe, minimizes erosion and disruption to natural drainage channel and promotes filtering and infiltration.

3. Pretreatment – All stormwater practices provide pretreatment as required in accordance with NYSSMDM design guidelines.

4. Treatment Geometry – The plan provides water quality treatment in accordance with NYSSMDM guidelines.

5. Environmental/Landscaping –Extensive landscaping has been provided for each proposed stormwater practice to enhance pollutant removal and provide aesthetic enhancement to the property.

6. Maintenance – Maintenance for the environment practices has been provided and is detain the SWPPP Report as required. Maintenance access is provided in the design plans.

In order to determine the post-development rates of runoff generated on-site, the following drainage areas were analyzed in the post-development conditions. These areas are graphically depicted on Drawing DA-2 "Proposed Drainage Area Map" located in Appendix F.

One Design Line (DL-1) was identified for comparing peak rates of runoff in existing and proposed conditions. Three separate drainage areas were identified in proposed conditions based on the proposed drainage divides at the site. The numbers included in the name of each drainage area correspond to the Design Point they drain towards.

The following is a description of each of the drainage areas analyzed in the proposed conditions analysis:

Proposed Drainage Area 1A-1 (PDA-1A-1) is 0.424 acres in size and makes up the majority of the site along Saw Mill River Road and Ridge Road. This area consists of pavement, the addition of a proposed gas station convenience building, driveway improvements, addition of lawn areas and associated sidewalk improvements. This drainage area drains in the southerly direction. Runoff from this area is either captured by slotted drain or is captured by drain inlets and conveyed to the underground Sand Filter or Hydrodynamic Separator and after being treated, into the existing stormwater infrastructure and eventually discharged into the Saw Mill River.

The Curve Number (CN) and Time of Concentration (Tc) for this drainage area are 90 and 5 minutes, respectively.

Proposed Drainage Area 1A-2 (PDA-1A-2) 0.090 Acres in size and is located towards the center of the site. This drainage area drains in the southerly direction and is fully comprised of the gas pump concrete pad area and underground gas tank filling area. This area is captured by slotted drains and conveyed to a proposed subsurface sand filter for water quality treatment. Once treated, stormwater will be conveyed to the existing stormwater infrastructure and eventually discharged into the Saw Mill River.

The Curve Number (CN) and Time of Concentration (Tc) for this drainage area are 98 and 5 minutes, respectively. Refer to Drawing DA-2 in Appendix F.

Proposed Drainage Area 1B (PDA-1B) is 0.094 acres in size and is located on the Northern portion of the site along the Bramble Brook which is south of Ardsley Road. This area consists of mostly undisturbed vegetated areas with minor grading and building appurtenances. This drainage area drains to the Bramble Brook which eventually discharges to the Saw Mill River.

The Curve Number (CN) and Time of Concentration (Tc) for this drainage area are 75 and 5 minutes, respectively. Refer to Drawing DA-2 in Appendix F.

The peak rates of runoff to the design line for each of the analyzed drainage areas for each storm analyzed are shown in the table below:

Table 3
Summary of Proposed Peak Rates of Runoff in Proposed Conditions
(Cubic Feet per Second)

Storm Recurrence Interval	DP-1
1 year	1.08
10 year	2.27
100 year	4.31

The reductions in peak rates of runoff from proposed to existing conditions are shown in the table below:

Table 4
Percent Reductions in Peak Rates of Runoff (Existing vs. Proposed Conditions)
(Cubic Feet per Second)

Design Point	Storm Recurrence Frequency (Years)	Existing Peak Runoff Rate (cfs)	Proposed Peak Runoff Rate (cfs)	Percent Reduction (%)
1	1 year	1.15	1.08	6.1
	10 year	2.34	2.27	3.0
	100 year	4.37	4.31	1.4

As demonstrated in Table 4, the proposed stormwater improvements will result in significant reductions of peak rates of runoff for all storms and design points analyzed.

The peak rates of runoff to the design point of each of the analyzed drainage areas for each storm are shown in the table below:

Table 5
Summary of Proposed Volume of Runoff in Proposed Conditions
(Cubic Feet)

Storm Recurrence Interval	DP-1
1 year	3,936
10 year	8,507
100 year	16,737

The reductions in peak rates of runoff from proposed to existing conditions are shown on the table below:

Table 6
Percent Reductions in Volume of Runoff (Existing vs. Proposed Conditions)
(Cubic Feet)

Design Point	Storm Recurrence Frequency (Years)	Existing Peak Runoff Rate (cfs)	Proposed Peak Runoff Rate (cfs)	Percent Reduction (%)
1	1 year	4,147	3,936	5.1
	10 year	8,803	8,507	3.4
	100 year	17,094	16,737	2.1

As demonstrated in Table 6, the proposed stormwater improvements will result in reductions of volumes of runoff for all storms and the design line analyzed.

By reducing the peak rates of runoff and volumes discharging from the site, the velocity of runoff discharging form the site is consequently reduced thereby reducing the flow to the existing 12" reinforced concrete pipe that the site drains into.

VI. SOIL EROSION & SEDIMENT CONTROL

A potential impact of the proposed development on any soils or slopes will be that of erosion and transport of sediment during construction. An Erosion and Sediment Control Management Program will be established for the proposed development, beginning at the start of construction and continuing throughout its course, as outlined in the "New York State Standards and Specifications for Erosion and Sediment Control," November 2016. A continuing maintenance program will be implemented for the control of sediment transport and erosion control after construction and throughout the useful life of the project.

The Operator shall have a qualified professional conduct an assessment of the site prior to the commencement of construction and certify that the appropriate erosion and sediment controls, as shown on the Sediment & Erosion Control Plans, have been adequately installed to ensure

overall preparedness of the site for the commencement of construction. In addition, the Operator shall have a qualified professional conduct one site inspection at least every seven calendar days and at least two site inspections every seven calendar days when greater than five acres of soil is disturbed at any one time.

Prior to the commencement of construction activity, the owner or operator must identify the contractor(s) and subcontractor(s) that will be responsible for installing, constructing, repairing, replacing, inspecting and maintaining the erosion and sediment control practices included in the SWPPP; and the contractor(s) and subcontractor(s) that will be responsible for constructing the post-construction stormwater management practices included in the SWPPP. The owner or operator shall have each of the contractors and subcontractors identify at least one person from their company that will be responsible for implementation of the SWPPP. This person shall be known as the trained contractor. The owner or operator shall ensure that at least one trained contractor is on site on a daily basis when soil disturbance activities are being performed. The owner or operator shall have each of the contractors and subcontractors identified above sign a copy of the certification statement provided in this document before they commence any construction activity.

Soil Description

As provided by the United States Department of Agriculture, Soil Conservation Service "Web Soil Survey," soil classifications which exist on the subject site are described below.

Soils are placed into four hydrologic groups: A, B, C, and D. In the definitions of the classes, infiltration rate is the rate at which water enters the soil at the surface and is controlled by the surface conditions. Transmission rate is the rate at which water moves in the soil and is controlled by soil properties. Definitions of the classes are as follows:

A. (Low runoff potential). The soils have a high infiltration rate even when thoroughly wetted. They chiefly consist of deep, well drained to excessively drained sands or gravels. They have a high rate of water transmission.

B. The soil has a moderate infiltration rate when thoroughly wetted. They chiefly are moderately deep to deep, moderately well drained to well drained soils that have moderately fine to moderately coarse textures. They have a moderate rate of water transmission.

C. The soil has a slow infiltration rate when thoroughly wetted. They chiefly have a layer that impedes downward movement of water or have moderately fine to fine texture. They have a slow rate of water transmission.

D. (High runoff potential). The soil has a very slow infiltration rate when thoroughly wetted. They chiefly consist of clay soils that have a high swelling potential, soils that have a permanent high-water table, soils that have a claypan or clay layer at or near the surface, and shallow soils over nearly impervious material. They have a very slow rate of water transmission.

A soil's tendency to erode is also described in the USDA web soil survey. The ratings in this interpretation indicate the hazard of soil loss from unsurfaced areas. The ratings are based on soil erosion factor K, slope, and content of rock fragments. The hazard is described as "slight," "moderate," or "SEVERE." A rating of "slight" indicates that little or no erosion is likely; "moderate" indicates that some erosion is likely, that the temporarily unsurfaced / unstabilized during construction may require occasional maintenance, and that simple erosion-control measures are needed; and "SEVERE" indicates that significant erosion is expected, that the roads or trails require frequent maintenance, and that erosion-control measures are needed.

Per the Soil Survey, the following soils listed below are present at the site. Following this list is a detailed description of each soil type found on the property:

SYM.	HYDRO. SOIL GROUP	DESCRIPTION
Uf	N/A (Assumed D)	Urban Land

Uf, Urban Land

The Site is entirely made up of what is categorized as Urban Land. The USDA Web Soil Survey does not assign values to characteristics such as drainage type, parent material, etc. because of the unpredictability of Urban Land. For the stormwater calculations, it was assumed to be poorly drainged type 'D' soil.

On-Site Pollution Prevention

There are temporary pollution prevention measures used to control litter and construction debris on site, such as:

- Silt Fence
- Silt Sack
- Stone & Block Drop Inlet Protection

There will be inlet protection provided for all storm drains and inlets with the use of curb gutter inlet protection structures and stone & block drop inlet protection, which keep silt, sediment and construction litter and debris out of the on-site stormwater drainage system.

Temporary Control Measures

Temporary control measures and facilities will include silt fences, construction ditches, stabilized construction access, temporary seeding, mulching and sediment traps with temporary riser and anti-vortex devices.

Throughout the construction of the proposed redevelopment, temporary control facilities will be implemented to control on-site erosion and sediment transfer. Construction ditches, if required, will be used to direct stormwater runoff to temporary sediment traps for settlement. The sediment traps will be constructed as part of this project and will serve as temporary sediment basins to remove sediment and pollutants from the stormwater runoff produced during construction.

Descriptions of the temporary sediment & erosion controls that will be used during the development of the site including silt fence, stabilized construction access, seeding, mulching and inlet protection are as follows:

1. Silt Fence is constructed using a geotextile fabric. The fence will be either 18 inches or 30 inches high. The height of the fence can be increased in the event of placing these devices on uncompacted fills or extremely loose undisturbed soils. The fences will not be placed in areas which receive concentrated flows such as ditches, swales and channels nor will the filter fabric material be placed across the entrance to pipes, culverts, spillway structures, sediment traps or basins.

2. Stabilized Construction Access consists of AASHTO No. 1 rock. The rock entrance will be a minimum of 50 feet in length by 24 feet in width by 8 inches in depth.

3. Seeding will be used to create a vegetative surface to stabilize disturbed earth until at least 80% of the disturbed area has a perennial vegetative cover. This amount is required to adequately function as a sediment and erosion control facility. Grass lining will also be used to line temporary channels and the surrounding disturbed areas.

4. Mulching is used as an anchor for seeding and disturbed areas to reduce soil loss due to storm events. These areas will be mulched with straw at a rate of 3 tons per acre such that the mulch forms a continuous blanket. Mulch must be placed after seeding or within 48 hours after seeding is completed.

5. Inlet Protection will be provided for all stormwater basins and inlets with the use of curb & gutter inlet protection and stone & block inlet protection structures, which will keep silt, sediment and construction debris out of the storm system. Existing structures within existing paved areas will be protected using "Silt Sacks" inside the structures.

The contractor shall be responsible for maintaining the temporary sediment and erosion control measures throughout construction. This maintenance will include, but not be limited to, the following tasks:

1. For dust control purposes, moisten all exposed graded areas with water at least twice a day in those areas where soil is exposed and cannot be planted with a temporary cover due to construction operations or the season (December through March).

2. Inspection of erosion and sediment control measures shall be performed at the end of each construction day and immediately following each rainfall event. All required repairs shall be immediately executed by the contractor.

3. Sediment deposits shall be removed when they reach approximately ⅓ the height of the silt fence. All such sediment shall be properly disposed of in fill areas on the site, as directed by the Owner's Field Representative. Fill shall be protected following disposal with mulch, temporary and/or permanent vegetation and be completely circumscribed on the downhill side by silt fence.

4. Rake all exposed areas parallel to the slope during earthwork operations.

5. Following final grading, the disturbed area shall be stabilized with a permanent surface treatment (i.e. turf grass, pavement or sidewalk). During rough grading, areas which are not to be disturbed for fourteen or more days shall be stabilized with the temporary seed mixture, as defined on the plans. Seed all piles of dirt in exposed soil areas that will not receive a permanent surface treatment.

Concrete Material and Equipment Management

Concrete washouts shall be used to contain concrete and liquids when the chutes of concrete mixers and hoppers of concrete pumps are rinsed out after delivery. The washout facilities consolidate solid for easier disposal and prevent runoff of liquids. The wash water is alkaline and

contains high levels of chromium, which can leach into the ground and contaminate groundwater. It can also migrate to a storm drain, which can increase the pH of area waters and harm aquatic life. Solids that are improperly disposed of can clog storm drainpipes and cause flooding. Installing concrete washout facilities not only prevents pollution but also is a matter of good housekeeping at your construction site.

Prefabricated concrete washout containers can be delivered to the site to provide maintenance and disposal of materials. Regular pickup of solid and liquid waste materials will be necessary. To prevent leaks on the job site, ensure that prefabricated washout containers are watertight. A self-installed concrete washout facility can be utilized although they are much less reliable than prefabricated containers and are prone to leaks. There are many design options for the washout, but they are preferably built below-grade to prevent breaches and reduce the likelihood of runoff. Above-grade structures can also be used if they are sized and constructed correctly and are diligently maintained. One of the most common problems with self-installed concrete washout facilities is that they can leak or be breached because of constant use, therefore the contractor shall be sure to use quality materials and inspect the facilities on a daily basis.

Washouts must be sized to handle solids, wash water, and rainfall to prevent overflow. Concrete Washout Systems, Inc. estimates that 7 gallons of wash water are used to wash one truck chute and 50 gallons are used to wash out the hopper of a concrete pump truck.

For larger sites, a below-grade washout should be at least 10 feet wide and sized to contain all liquid and solid waste expected to be generated in between cleanout periods. A minimum of 12-inches of freeboard must be provided. The pit must be lined with plastic sheeting of at least 10-mil thickness without holes or tears to prevent leaching liquids into the ground. Concrete wash water should never be placed in a pit that is connected to the storm drain system or that drains to nearby waterways.

An above-grade washout can be constructed at least 10 feet wide by 10 feet long and sized to contain all liquid and solid waste expected to be generated in between cleanout periods. A

minimum of 4-inches of freeboard must be provided. The washout structures can be constructed with staked straw bales or sandbags double-or triple lined with plastic sheeting of at least 10-mil thickness without holes or tears.

Concrete washout facilities shall not be located within 50 feet of storm drains, open ditches, or water bodies and should be placed in locations that allow for convenient access for concrete trucks. The contractor shall check all concrete washout facilities daily to determine if they have been filled to 75 percent capacity, which is when materials need to be removed. Both above-and below-ground self-installed washouts should be inspected daily to ensure that plastic linings are intact and sidewalls have not been damaged by construction activities. Prefabricated washout containers should be inspected daily as well as to ensure the container is not leaking or nearing 75 percent capacity. Inspectors should also note whether the facilities are being used regularly. Additional signage for washouts may be needed in more convenient locations if concrete truck operators are not utilizing them.

The washout structures must be drained or covered prior to predicted rainstorms to prevent overflows. Hardened solids, either whole or broken must be removed and then they may be reused onsite or hauled away for recycling.

Once materials are removed from the concrete washout, a new structure must be built or excavated, or if the previous structure is still intact, inspect it for signs of weakening or damage and make any necessary repairs. Line the structure with new plastic that is free of holes or tears and replace signage if necessary. It is very important that new plastic be used after every cleaning because pumps and concrete removal equipment can damage the existing liner.

Construction Site Chemical Control

The purpose of this management measure is to prevent the generation of nonpoint source pollution from construction sites due to improper handling and usage of nutrients and toxic substances, and to prevent the movement of toxic substances from the construction site.

Many potential pollutants other than sediment are associated with construction activities. These pollutants include pesticides; fertilizers used for vegetative stabilization; petrochemicals; construction chemicals such as concrete products, sealers, and paints; wash water associated with these products; paper; wood; garbage; and sanitary waste.

Disposal of excess pesticides and pesticide-related wastes should conform to registered label directions for the disposal and storage of pesticides and pesticide containers set forth in applicable Federal, State and local regulations that govern their usage, handling, storage, and disposal.

Pesticides should be disposed of through either a licensed waste management firm or a treatment, storage and disposal (TSD) facility. Containers should be triple rinsed before disposal, and rinse waters should be reused as product.

Other practices include setting aside a locked storage area, tightly closing lids, storing in a cool, dry place, checking containers periodically for leaks or deterioration, maintaining a list of products in storage, using plastic sheeting to line the storage areas, and notifying neighboring property owners prior to spraying.

When storing petroleum products, follow these guidelines:

- Create a shelter around the area with cover and wind protection;
- Line the storage area with a double layer of plastic sheeting or similar material;
- Create an impervious berm around the perimeter with a capacity of 110 percent greater than that of the largest container;
- Clearly label all products;
- Keep tanks off the ground; and
- Keep lids securely fastened.

Post spill procedure information and have persons trained in spill handling on site or on call at all times. Materials for cleaning up spills should be kept on site and easily available. Spills should be

cleaned up immediately and the contaminated material properly disposed of. Maintain and wash equipment and machinery in confined areas specifically designed to control runoff.

Thinners or solvents should not be discharged into sanitary or storm systems when cleaning machinery. Use alternative methods for cleaning larger equipment parts, such as high-pressure, high-temperature water washes, or steam cleaning. Equipment-washing detergents can be used, and wash water may be discharged into sanitary sewers if solids are removed from the solution first. (This practice should be verified with the local sewer authority.) Small parts can be cleaned with degreasing solvents, which can then be reused or recycled.

Solid Waste Management and Portable Sanitary Management

The purpose of this management measure is to prevent the potential for solid waste such as construction debris, trash, etc. from construction sites due to improper handling and storage. Debris and litter should be removed periodically from the BMP's and surrounding areas to prevent clogging of pipes and structures. All construction material shall be stored in designated staging areas. Roll-off containers shall be placed on site and all empty containers, construction debris and litter shall be placed in the containers.

Portable sanitary units may be utilized on-site, or bathrooms will be provided within construction trailers. A sanitation removal company will be hired to pump/remove any sanitary waste. If portable sanitary units are used and then cleaned after being emptied, the rinse water may not be disposed of to the storm drain system. It shall be contained for later disposal if it can't be disposed of on-site. Remove paper and trash before cleaning the portable sanitary units. The portable sanitary units shall be located away from the storm drain system if possible. Provide overhead cover for wash areas if possible. Maintain spill response material and equipment on site to eliminate the potential for contaminants and wash water from entering the storm drain system.

Permanent Control Measures and Facilities for Long Term Protection

Towards the completion of construction, permanent sediment and erosion control measures will

be developed for long term erosion protection. The following permanent control measures and facilities have been proposed to be implemented for the project:

1. CDS Water Quality Structure will be used to provide pretreatment of the water quality flow rate for separating sediment, debris, floatables, etc. from the runoff prior to discharge to the SMP's.

Specifications for Soil Restoration

Prior to the final stabilization of the disturbed areas, soil restoration will be required for all vegetated areas to recover the original properties and porosity of the soil. Soil Restoration Requirements are provided on Table 7 below:

Table 7

Soil Restoration Requirements

Type of Soil Disturbance	Soil Restoration Requirement		Comments/Examples
No soil disturbance	Restoration not permitted		Preservation of Natural Features
Minimal soil disturbance	Restoration not required		Clearing and grubbing
Areas where topsoil is stripped only – no change in grade	HSG A&B	HSG C&D	Protect area from any ongoing construction activities
	apply 6 inches of topsoil	Aerate* and apply 6 inches of topsoil	
Areas of cut or fill	HSG A&B	HSG C&D	Clearing and grubbing
	Aerate and apply 6 inches of topsoil	Apply full Soil Restoration**	
Heavy traffic areas on site (especially) in a zone 5-25 feet around buildings but not within a 5 foot perimeter around foundation walls)	Apply full Soil Restoration (decompaction and compost enhancement)		
Areas where Runoff Reduction and/or Infiltration practices are applied	Restoration not required, but may be applied to enhance the reduction specified for appropriate practices.		Keep construction equipment from crossing these areas. To protect newly installed practice from any ongoing construction

		activities construct a single phase operation fence area.
Redevelopment projects	Soil Restoration is required on redevelopment projects in areas where existing impervious area will be converted to pervious area.	

* Aeration includes the use of machines such as tractor-drawn implements with coulters making a narrow slit in the soil, a roller with many spikes making indentations in the soil, or prongs which function like a mini-subsoiler.

** Per "Deep Ripping and De-compaction, DEC 2008."

During periods of relatively low to moderate subsoil moisture, the disturbed subsoils are returned to rough grade and the following full soil restoration steps applied:

1. Apply 3 inches of compost over subsoil.

2. Till compost into subsoil to a depth of at least 12 inches using a cat-mounted ripper, tractor-mounted disc, or tiller, mixing, and circulating air and compost into subsoils.

3. Rock-pick until uplifted stone/rock materials of four inches and larger size are cleaned off the site.

Specifications for Final Stabilization of Graded Areas

Final stabilization of graded areas consists of the placement of topsoil and installation of landscaping (unless the area is to be paved, or a building is to be constructed in the location). Topsoil is to be spread as soon as grading operations are completed. Topsoil is to be placed to a minimum depth of six inches on all embankments, planting areas and seeding/sod areas. The subgrade is to be scarified to a depth of two inches to provide a bond of the topsoil with the subsoil. Topsoil is to be raked to an even surface and cleared of all debris, roots, stones and other unsatisfactory material.

Planting operations shall be conducted under favorable weather conditions as follows:

- Permanent Lawns - April 15 (provided soil is frost-free and not excessively moist) to May 15; August 15 to October 15.
- Temporary Lawn Seeding - if outside of the time periods noted above, the areas shall be seeded immediately on completion of topsoil operations with annual ryegrass (Italian rye) at a rate of six pounds per 1,000 square feet. Temporary lawn installation is permitted provided the soil is frost-free and not excessively moist. The permanent lawn is to be installed the next planting season.

On slopes with a grade of 3 horizontal to 1 vertical or greater, and in swales, a geotextile netting or mat shall be installed for stabilization purposes as shown on the Plans. Seeded areas are to be mulched with straw or hay at an application rate of 70-90 pounds per 1,000 s.f. Straw or hay mulch must be spread uniformly and anchored immediately after spreading to prevent wind blowing. Mulches must be inspected periodically and in particular after rainstorms to check for erosion. If erosion is observed, additional mulch must be applied. Netting shall be inspected after rainstorms for dislocation or failure; any damage shall be repaired immediately.

All denuded surfaces which will be exposed for a period of over two months or more shall be temporarily hydroseeded with (a) perennial ryegrass at a rate of 40 lbs per acre (1.0 lb per 1000 square feet); (b) Certified "Aroostook" winter rye (cereal rye) @ 100 lb per acre (2.5 lb/1000 s.f.) to be used in the months of October and November.

Permanent turfgrass cover is to consist of a seed mixture as follows:

(a) <u>Sunny sites</u>

Kentucky Bluegrass	2.0-2.6 pounds/1000 square feet
Perennial Ryegrass	0.6-0.7 pounds/1000 square feet
Fine Fescue	0.4-0.6 pounds/1000 square feet

(b) Shady sites

Kentucky Bluegrass	0.8-1.0 pounds/1000 square feet
Perennial Ryegrass	0.6-0.7 pounds/1000 square feet
Fine Fescue	2.6-3.3 pounds/1000 square feet

All plant materials shall comply with the standards of the American Association Of Nurserymen with respect to height and caliper as described in its publication American Standard for Nursery Stock, latest edition.

VII. CONSTRUCTION PHASE AND POST-CONSTRUCTION MAINTENANCE

During the construction phase and following construction of the project, a number of maintenance measures will be taken with respect to the site maintenance. Measures to be taken included the following:

1. During Construction

A comprehensive sediment and erosion control plan will be in place during the construction period. Maintenance measures for sediment and erosion controls will include:

A qualified professional acceptable to the municipality will be hired by the owner or operator to monitor the installation and maintenance of the sediment and erosion control plans. The qualified professional shall report directly to the Engineering Consultant and shall be responsible for ensuring compliance with the design of the sediment and erosion control plans.

The qualified professional so hired will inspect all sediment and erosion control measures at least every seven calendar days. In the event that there has been a variance with the design of the sediment and erosion control measures so that the ability of the measures to adequately perform the intended function is lessened or compromised and/or the facilities are not adequately maintained, the qualified professional shall be required to report such variance to the Engineering

Consultant within 48 hours and shall be empowered to order immediate repairs to the sediment and erosion control measures.

The qualified professional will also be responsible for observing the adequacy of the vegetation growth (trees, shrubs, groundcovers and turfgrasses) in newly graded areas and for ordering additional plantings in the event that the established plant materials do not adequately protect the ground surface from erosion.

2. Following Construction

Site maintenance activities on the property will include:

- Grounds maintenance, including mowing of lawns;
- Planting of trees, shrubs and groundcovers; pruning of trees and shrubs;
- Application of fertilizer and herbicides;
- Maintenance of stormwater management area;

Grounds maintenance on the site will be performed by landscaping contractor.

Fertilizer is typically applied twice in the year - once in the spring and once in the fall. The application of fertilizer is usually necessary to maintain healthy lawn growth due to competition for nutrients with trees and shrubs and since the clippings are often removed. It is not recommended that fertilizer be applied during the summer. It is at this time that lawns are typically dormant.

Fertilizers come in three basic types: (1) Organic; (2) Soluble synthetic and (3) Slow release.

Organic fertilizers are derived from plant or animal waste. Since they are heavier and bulkier than other fertilizers, it is necessary to apply a much greater amount at one time. Soluble synthetic fertilizers are predictable with determining the exact impact on a lawn. However more applications are necessary since their effect is often short term. Slow-release fertilizers have a

high percentage of nitrogen so quantities that need be handled at one time are smaller. Slow-release fertilizers will be utilized by the project.

A complete fertilizer contains all three of the primary nutrients - nitrogen (N), phosphorus (P) and potassium in the form of potash (K). Typically, a 3-1-2 ratio of nutrients (N-P-K) is used for lawn applications.

Fertilizer shall be applied by the landscape contractor in accordance with the manufacturer's instructions. The application of fertilizer does require some skill on the part of the operator. Should there be a spill of fertilizer, the landscape contractor shall be required to scrape or vacuum it up. The area will then be watered in accordance with the manufacturer's instructions to ensure that the fertilizer becomes soluble and available to plants and does not run off.

The owner will be responsible for the long-term operation and maintenance of the permanent stormwater management practices. The permanent stormwater management practices shall be maintained in accordance with the Maintenance Inspection Checklists provided in this document.

VIII. CONCLUSION

This Stormwater Pollution Prevention Plan has been prepared to describe the project's pre- and post-development stormwater management improvements and its sediment and erosion control improvements to be utilized during construction. The proposed permanent improvements and the interim improvements to be utilized during construction have been designed in accordance with the requirements of the:

- New York State Department of Environmental Conservation (NYSDEC) SPDES General Permit No. GP-0-20-001, effective January 29, 2020.
- Chapter 170 & Chapter 171, titled "Storm Sewers" & "Stormwater Management and Erosion and Sediment Control" of the Ardsley Zoning Code.
- New York State Stormwater Design Manual, dated January 2015.

The project employs a variety of practices to enhance stormwater quality and reduce peak rates of runoff associated with the proposed improvements. These measures include a water quality structure, a sand filter and a reduction of impervious coverage under proposed conditions as compared to existing conditions. These improvements will also mitigate runoff volumes from the proposed improvements as runoff volumes will be slightly reduced during all the analyzed rainfall events.

Based on the foregoing, it is our professional opinion that the proposed improvements will provide water quantity and quality enhancements which exceed the above-mentioned requirements and are not anticipated to have any adverse impacts to the site or any surrounding areas.

NYSDEC STORMWATER SIZING CALCULATIONS

WATER QUALITY VOLUME WORKSHEET

JMC Project:	**18175**
Design Point:	**DL-1**

Ardsley Gas Station	Drainage Area:	**PDA-1A-1&2**

Initial Water Quality Treatment Volume

DESCRIPTION	Design Storm	Area	Impervious Area	Percent Impervious	Runoff Coefficient	Total Required WQ Volume
SYMBOL	P	A	I	%I	R_V	WQ_V
VALUE	1.5	0.51	0.37	72.43	0.701841929	**1,965**
UNITS	In	Ac	Ac	%	CF	CF
VALUE	Enhanced Phosphorus Removal (WQ_V = 1-yr Storm Runoff)					

Runoff Reduction Techniques (Area)

DESCRIPTION	Total Area	Impervious Area
SYMBOL	A	I
Conservation of Natural Areas		
Sheetflow to Riparian Buffers or Filter Strips		
Vegetated Swale		
Tree Planting / Tree Pit		
Disconnection of Rooftop Runoff		
Stream Daylighting		
TOTAL		
UNITS	Ac	Ac

Adjusted Water Quality Treatment Volume

DESCRIPTION	Design Storm	Area	Impervious Area	Percent Impervious	Runoff Coefficient	Total Required WQ Volume
SYMBOL	P	A	I	%I	R_V	WQ_V
VALUE	1.5	0.51	0.37	72.43	0.701841929	**1,965**
UNITS	In	Ac	Ac	%	CF	CF
VALUE	Enhanced Phosphorus Removal (WQ_V = 1-yr Storm Runoff)					

Date Printed: 11/30/2023

SAND FILTER

JMC Project:	**18175**
Design Point:	**DL-1**
Drainage Area:	**PDA 1A-2**

Perimeter Sand Filter

Site Data for Drainage Area to be Treated by Practice			
DESCRIPTION	*SYMBOL*	*VALUE*	*UNITS*
Design Storm [90% Rainfall Event Number]	P	1.5	In
Impervious Area	I	0.09	Ac
Area	A	0.09	Ac
Percent Impervious	%I	100.00	%
Runoff Coefficient [0.05 + 0.009 x %I]	R_V	0.95	CF
TOTAL VOLUME Required [$WQ_V = (P \times R_V \times A) / 12$]	WQ_V	**468**	CF

Minimum Sandfilter Bed Area			
DESCRIPTION	*SYMBOL*	*VALUE*	*UNITS*
Water Quality Volume	WQ_V	468	CF
Coefficient of permeability of filter media (hydraulic conductivity)	k	3.50	Ft / Day
Filter bed Depth (Sand Media)	d_f	1.50	Ft
Average Height of water above filter bed	h_f	1.50	Ft
Design filter bed drain Time	t_f	1.67	Days
Required Surface Area of Filter Bed [$A_f = (WQ_V \times d_f) / (k \times (h_f + d_f) \times t_f)$]	A_f	**40.04**	SF

Proposed SandfilterArea			
DESCRIPTION	*SYMBOL*	*VALUE*	*UNITS*
Calculated filter bed area (Length x Width)		42.00	SF
Surface Area of Filter Bed Provided	A_f	**42.00**	SF
Actual Volume Provided		**490.98**	CF

Sedimentation basin area			
DESCRIPTION	*SYMBOL*	*VALUE*	*UNITS*
Required Sedimentation Basin Volume = SBv=(0.25*WQV)	SBv	**117**	CF
Provided Sedimentation Basin Area	As	**54**	SF
Provided Sedimentation Basin Volume SBv = As * 2.2'	SBv	**119**	CF

PROPRIETARY PRACTICE WORKSHEET

Continuous Deflective Separation Unit - WQS-1

APPENDIX D

TEMPORARY EROSION AND SEDIMENT CONTROL INSPECTION AND MAINTENANCE CHECKLIST PERMANENT STORMWATER PRACTICE OPERATION, MAINTENANCE AND MANAGEMENT INSPECTION CHECKLISTS

JMC Project 18175
Ardsley Gas Station
657 Saw Mill River Road
Village of Ardsley, NY

Temporary Erosion and Sediment Control Inspection and Maintenance Checklist

Erosion and Sediment Control Measure	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Stabilized Construction Entrance	Daily	• Periodic top dressing with additional aggregate as required • Clean sediment in public right-of-ways immediately
Silt Fence	Weekly + After Each Rain	• Remove & redistribute sediment when bulges develop in the silt fence.
Inlet Protection	Weekly + After Each Rain	• Remove sediment as necessary and replace filter fabric, crushed stone etc. • Any broken and damaged components should be replaced. • Check all materials for proper anchorage and secure as necessary.
Concrete Washout	Daily	• Damaged or leaking facilities shall be deactivated and repaired or replaced immediately.
	After Each Rain	• Pump excess rainwater that has accumulated over hardened concrete to a stabilized area.
		• Remove accumulated hardened material when 75% of the storage capacity of the structure is filled. Replace plastic liner with each cleaning of the washout facility.

Permanent Stormwater Management Practice Inspection and Maintenance Checklist (Cont'd)

Stormwater Management Practice	Inspection/Maintenance Intervals	Inspection/Maintenance Requirements
Drain Inlets	Monthly	• Check for blockage and/or erosion at top of each inlet. Repair/remove as necessary. • Check for sediment and debris collected within sumps and clean out as necessary.
Hydrodynamic Water Quality Structure	(See Maintenance Guidelines in Appendix D of the SWPPP)	• Open access cover for visual inspection and measure the distance from the standing water surface to the sediment pile with a measuring stick or tape. If less than 4 feet, insert hose from vacuum truck into the sump and screen through both access covers to clean out the standing water, layer of oil, sediment, trash, etc. • The screen must be powerwashed to ensure it is free of trash and debris.

Permanent Stormwater Management Practice Inspection and Maintenance Checklist (Cont'd)

Stormwater Management Practice	Inspection/Maintenance Intervals	• Inspection/Maintenance Requirements
Subsurface Sand Filter	Quaterly + After Major Storms	• Check level of sediment and debris accumulated within the system. • Check structural integrity of the system pipes, structures, etc. for cracking, bulging or deterioration. Repair/remove as necessary. • Confirm all inlets and outlet structures/pipes are operating properly.

The owner/operator responsible for inspection and maintenance as outlined above:

Thornwood Four Corners, LLC
Bryan Orser
25 Saint Charles Street
Thornwood, New York 10594
Phone: (914) 473-0122

APPENDIX E

CONTRACTOR'S CERTIFICATION

JMC Project 18175
Ardsley Gas Station
657 Saw Mill River Road
Village of Ardsley, NY

CONTRACTOR'S CERTIFICATION

"I hereby certify under penalty of law that I understand and agree to comply with the terms and conditions of the SWPPP and agree to implement any corrective actions identified by the qualified inspector during a site inspection. I also understand that the owner or operator must comply with the terms and conditions of the most current version of the New York State Pollutant Discharge Elimination System ("SPDES") general permit for stormwater discharges from construction activities and that it is unlawful for any person to cause or contribute to a violation of water quality standards. Furthermore, I am aware that there are significant penalties for submitting false information, that I do not believe to be true, including the possibility of fine and imprisonment for knowing violations"

Company Name: _____

Address: _____

Telephone Number: _____

Name and Title: _____

Signature: _____ Date: _____

Permit Identification No.:_____

Name and Title of Trained Contractor:_____

DEC Region
3

The DEC Region must be provided. Please use the NYSDEC Stormwater Interactive Map (https://gisservices.dec.ny.gov/gis/stormwater/) to confirm which DEC Region this site is located in. To view the DEC Regions, click on “Other Useful Reference Layers” on the left side of the map, then click on “DEC Administrative Boundary.” Zoom out as needed to see the Region boundaries.

For projects that span multiple Regions, please select a primary Region and then provide the additional Regions as a note in Question 39.

County
WESTCHESTER

Name of Nearest Cross Street
Ashford Avenue

Distance to Nearest Cross Street (Feet)
50

Project In Relation to Cross Street
South

Tax Map Numbers Section-Block-Parcel

Tax Map Numbers
650-35-10

If the project does not have tax map numbers (e.g. linear projects), enter “Not Applicable” or "N/A".

1. Coordinates

Provide the Geographic Coordinates for the project site. The two methods are:
- Navigate to the project location on the map (below) and click to place a marker and obtain the XY coordinates.
- The "Find Me" button will provide the lat/long for the person filling out this form. Then pan the map to the correct location and click the map to place a marker and obtain the XY coordinates.

Navigate to your location and click on the map to get the X,Y coordinates
41.0112611,-73.84813199999999

Project Details

2. What is the nature of this project?
Redevelopment with no increase in impervious area

For the purposes of this eNOI, “New Construction” refers to any project that does not involve the disturbance of existing impervious area (i.e. 0 acres). If existing impervious area will be disturbed on the project site, it is considered redevelopment with either increase in impervious area or no increase in impervious area.

3. Select the predominant land use for both pre and post development conditions.

Pre-Development Existing Landuse
Commercial

Post-Development Future Land Use
Commercial

3a. If Single Family Subdivision was selected in question 3, enter the number of subdivision lots.
NONE PROVIDED

---

4. In accordance with the larger common plan of development or sale, enter the total project site acreage, the acreage to be disturbed and the future impervious area (acreage)within the disturbed area.

*** ROUND TO THE NEAREST TENTH OF AN ACRE. ***

Total Site Area (acres)
0.5

Total Area to be Disturbed (acres)
0.5

Existing Impervious Area to be Disturbed (acres)
0.5

Future Impervious Area Within Disturbed Area (acres)
0.4

5. Do you plan to disturb more than 5 acres of soil at any one time?
No

---

6. Indicate the percentage (%) of each Hydrologic Soil Group(HSG) at the site.

A (%)
0

B (%)
0

C (%)
0

D (%)
100

7. Is this a phased project?
No

8. Enter the planned start and end dates of the disturbance activities.

Start Date
04/01/2024

End Date
10/07/2024

9. Identify the nearest surface waterbody(ies) to which construction site runoff will discharge.
Saw Mill River

Drainage ditches and storm sewer systems are not considered surface waterbodies. Please identify the surface waterbody that they discharge to. If the nearest surface waterbody is unnamed, provide a description of the waterbody, such as, “Unnamed tributary to Niagara River.”

9a. Type of waterbody identified in question 9?
River Off Site

Other Waterbody Type Off Site Description
NONE PROVIDED

9b. If "wetland" was selected in 9A, how was the wetland identified?
NONE PROVIDED

10. Has the surface waterbody(ies) in question 9 been identified as a 303(d) segment in Appendix E of GP-0-20-001?
Yes

11. Is this project located in one of the Watersheds identified in Appendix C of GP-0-20-001?
No

12. Is the project located in one of the watershed areas associated with AA and AA-S classified waters?
No

Please use the DEC Stormwater Interactive Map (https://gisservices.dec.ny.gov/gis/stormwater/) to confirm if this site is located in one of the watersheds of an AA or AA-S classified water. To view the watershed areas, click on “Permit Related Layers” on the left side of the map, then click on “Class AA AAS Watersheds.”

If No, skip question 13.

13. Does this construction activity disturb land with no existing impervious cover and where the Soil Slope Phase is identified as D (provided the map unit name is inclusive of slopes greater than 25%), E or F on the USDA Soil Survey?
No

If Yes, what is the acreage to be disturbed?
NONE PROVIDED

14. Will the project disturb soils within a State regulated wetland or the protected 100 foot adjacent area?
No

15. Does the site runoff enter a separate storm sewer system (including roadside drains, swales, ditches, culverts, etc)?
Yes

16. What is the name of the municipality/entity that owns the separate storm sewer system?
New York State

17. Does any runoff from the site enter a sewer classified as a Combined Sewer?
No

18. Will future use of this site be an agricultural property as defined by the NYS Agriculture and Markets Law?
No

19. Is this property owned by a state authority, state agency, federal government or local government?
No

20. Is this a remediation project being done under a Department approved work plan? (i.e. CERCLA, RCRA, Voluntary Cleanup Agreement, etc.)
No

Required SWPPP Components

21. Has the required Erosion and Sediment Control component of the SWPPP been developed in conformance with the current NYS Standards and Specifications for Erosion and Sediment Control (aka Blue Book)?
Yes

22. Does this construction activity require the development of a SWPPP that includes the post-construction stormwater management practice component (i.e. Runoff Reduction, Water Quality and Quantity Control practices/techniques)?
Yes

If you answered No in question 22, skip question 23 and the Post-construction Criteria and Post-construction SMP Identification sections.

23. Has the post-construction stormwater management practice component of the SWPPP been developed in conformance with the current NYS Stormwater Management Design Manual?
Yes

24. The Stormwater Pollution Prevention Plan (SWPPP) was prepared by:
Professional Engineer (P.E.)

SWPPP Preparer

Erosion & Sediment Control Criteria

25. Has a construction sequence schedule for the planned management practices been prepared?
Yes

26. Select all of the erosion and sediment control practices that will be employed on the project site:

Temporary Structural
Dust Control
Silt Fence
Stabilized Construction Entrance
Storm Drain Inlet Protection

Biotechnical
None

Vegetative Measures
Mulching
Protecting Vegetation
Seeding
Sodding
Topsoiling

Permanent Structural
Land Grading
Retaining Wall

Other
NONE PROVIDED

Post-Construction Criteria

*** IMPORTANT: Completion of Questions 27-39 is not required if response to Question 22 is No.**

27. Identify all site planning practices that were used to prepare the final site plan/layout for the project.
Locating Development in Less Sensitive Areas
Parking Reduction

27a. Indicate which of the following soil restoration criteria was used to address the requirements in Section 5.1.6("Soil Restoration") of the Design Manual (2010 version).
All disturbed areas will be restored in accordance with the Soil Restoration requirements in Table 5.3 of the Design Manual (see page 5-22).

28. Provide the total Water Quality Volume (WQv) required for this project (based on final site plan/layout). (Acre-feet)
0.045

29. Post-construction SMP Identification
Use the Post-construction SMP Identification section to identify the RR techniques (Area Reduction), RR techniques(Volume Reduction) and Standard SMPs with RRv Capacity that were used to reduce the Total WQv Required (#28).

Identify the SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

Note: Redevelopment projects shall use the Post-Construction SMP Identification section to identify the SMPs used to treat and/or reduce the WQv required. If runoff reduction techniques will not be used to reduce the required WQv, skip to question 33a after identifying the SMPs.

30. Indicate the Total RRv provided by the RR techniques (Area/Volume Reduction) and Standard SMPs with RRv capacity identified in question 29. (acre-feet)
0

31. Is the Total RRv provided (#30) greater than or equal to the total WQv required (#28)?
No

If Yes, go to question 36. If No, go to question 32.

32. Provide the Minimum RRv required based on HSG. [Minimum RRv Required = (P) (0.95) (Ai) / 12, Ai=(s) (Aic)] (acre-feet)
0

32a. Is the Total RRv provided (#30) greater than or equal to the Minimum RRv Required (#32)?
Yes

If Yes, go to question 33.
Note: Use the space provided in question #39 to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). A detailed evaluation of the specific site limitations and justification for not reducing 100% of

the WQv required (#28) must also be included in the SWPPP.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

33. SMPs
Use the Post-construction SMP Identification section to identify the Standard SMPs and, if applicable, the Alternative SMPs to be used to treat the remaining total WQv (=Total WQv Required in #28 - Total RRv Provided in #30).

Also, provide the total impervious area that contributes runoff to each practice selected.

NOTE: Use the Post-construction SMP Identification section to identify the SMPs used on Redevelopment projects.

33a. Indicate the Total WQv provided (i.e. WQv treated) by the SMPs identified in question #33 and Standard SMPs with RRv Capacity identified in question #29. (acre-feet)
0.045

Note: For the standard SMPs with RRv capacity, the WQv provided by each practice = the WQv calculated using the contributing drainage area to the practice - provided by the practice. (See Table 3.5 in Design Manual)

34. Provide the sum of the Total RRv provided (#30) and the WQv provided (#33a).
0.045

35. Is the sum of the RRv provided (#30) and the WQv provided (#33a) greater than or equal to the total WQv required (#28)?
Yes

If Yes, go to question 36.

If No, sizing criteria has not been met; therefore, NOI can not be processed. SWPPP preparer must modify design to meet sizing criteria.

36. Provide the total Channel Protection Storage Volume (CPv required and provided or select waiver (#36a), if applicable.

CPv Required (acre-feet)
0.045

CPv Provided (acre-feet)
0.045

36a. The need to provide channel protection has been waived because:
NONE PROVIDED

37. Provide the Overbank Flood (Qp) and Extreme Flood (Qf) control criteria or select waiver (#37a), if applicable.

Overbank Flood Control Criteria (Qp)

Pre-Development (CFS)
2.34

Post-Development (CFS)
2.27

Total Extreme Flood Control Criteria (Qf)

Pre-Development (CFS)
4.37

Post-Development (CFS)
4.31

37a. The need to meet the Qp and Qf criteria has been waived because:
NONE PROVIDED

38. Has a long term Operation and Maintenance Plan for the post-construction stormwater management practice(s) been developed?
Yes

If Yes, Identify the entity responsible for the long term Operation and Maintenance
Thornwood Four Corners, LLC

39. Use this space to summarize the specific site limitations and justification for not reducing 100% of WQv required (#28). (See question #32a) This space can also be used for other pertinent project information.
NONE PROVIDED

Post-Construction SMP Identification

Runoff Reduction (RR) Techniques, Standard Stormwater Management Practices (SMPs) and Alternative SMPs
Identify the Post-construction SMPs to be used by providing the total impervious area that contributes runoff to each technique/practice selected. For the Area Reduction Techniques, provide the total contributing area (includes pervious area) and, if applicable, the total impervious area that contributes runoff to the technique/practice.

V. Certification Statement - MS4 Official (principal executive officer or ranking elected official) or Duly Authorized Representative

I hereby certify that the final Stormwater Pollution Prevention Plan (SWPPP) for the construction project identified in question 5 has been reviewed and meets the substantive requirements in the SPDES General Permit For Stormwater Discharges from Municipal Separate Storm Sewer Systems (MS4s). Note: The MS4, through the acceptance of the SWPPP, assumes no responsibility for the accuracy and adequacy of the design included in the SWPPP. In addition, review and acceptance of the SWPPP by the MS4 does not relieve the owner/operator or their SWPPP preparer of responsibility or liability for errors or omissions in the plan.

eNOI Submitted by: ☐ **Owner/Operator** ☑ **SWPPP Preparer** ☐ **Other**

Certification Statement - Owner/Operator

I have read or been advised of the permit conditions and believe that I understand them. I also understand that, under the terms of the permit, there may be reporting requirements. I hereby certify that this document and the corresponding documents were prepared under my direction or supervision. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. I further understand that coverage under the general permit will be identified in the acknowledgment that I will receive as a result of submitting this NOI and can be as long as sixty (60) business days as provided for in the general permit. I also understand that, by submitting this NOI, I am acknowledging that the SWPPP has been developed and will be implemented as the first element of construction, and agreeing to comply with all the terms and conditions of the general permit for which this NOI is being submitted.

TABLE OF CONTENTS

I. INTRODUCTION

This Traffic Study has been prepared to assess existing conditions as well as future traffic operations in association with the proposed redevelopment of the property located at 657 Saw Mill River Road. The site is bordered by NY 9A to the west and Ridge Road to the south. The location of the site is shown on figures contained in Appendix B.

The approximately half acre property was the location of a former gas station and repair shop contained within a 2,370 square foot building with 2 gasoline pump islands (4 fueling positions). The existing building and gasoline pump islands are currently removed from the property. The Applicant proposes to construct a 2,210 square foot convenience store with a gasoline filling station. The redevelopment proposes 3 gasoline pump islands (6 fueling positions).

Access to the property is currently provided via two full movement driveways along Saw Mill River Road (NY 9A) and a single full movement driveway along Ridge Road. Under proposed conditions, the existing driveways along NY 9A are proposed to be reconstructed to provide a one-way flow with the southern driveway being ingress only and northern driveway being egress only. The existing driveway along Ridge Road is proposed to be removed. Based on the memorandum from the Village's Planning Board to the Village's Board of Trustees, the Applicant proposes to restrict the northern egress only driveway to right turn exiting movements only.

II. EXISTING TRAFFIC CONDITIONS

A. Existing Roadway Network

JMC performed field reconnaissance of the existing roadway network within the area of this Study in order to gather existing conditions data that is relevant and necessary for the completion of the Study. This reconnaissance included a determination of lane widths, striping, horizontal and vertical alignments, signs, speed limits, traffic flows, on-street parking, sidewalks, curbing, etc. for each of the

roadways. The following is a summary of some of our findings related to the major roadways within the summary area.

NY 9A is also known as Saw Mill River Road. It is a north/south roadway which provides one lane in each direction in the study area and widens to provide additional lanes at several intersections. NY 9A is under the jurisdiction of the New York State Department of Transportation (NYSDOT). NY 9A has a posted speed limit of 30 mph in the vicinity of the site. On-street parking is generally prohibited on both sides of the street.

Ridge Road and Bridge Street are local roadways under the jurisdiction of the Village of Ardsley. Both roadways provide one lane in each direction and have a posted speed limit of 30 mph. On-street parking is prohibited within the study area along Ridge Road and Bridge Street.

In order to evaluate the changes in traffic associated with the proposed redevelopment, the following intersections have been analyzed:

1. NY 9A & Ashford Avenue with Addyman Square
2. NY 9A & Site Driveway A
3. NY 9A & Site Driveway B
4. NY 9A & Ridge Road with Bridge Street
5. Ridge Road & Site Driveway C

NY 9A intersects Ashford Avenue at a five-legged signalized intersection. The northbound approach provides a left turn lane, a thru lane and a right turn lane. The southbound approach provides a left turn lane, a thru lane and a right turn lane. The Ashford Avenue eastbound approach provides a left turn lane and a thru lane with shared right turns. The Ashford Avenue westbound approach provides a left turn lane, two thru lanes and a channelized right turn lane. The fifth leg of the intersection is Addyman Square which provides access to a small parking lot. There

are existing bus stops located north of the intersection along NY 9A in both directions as well as east of the intersection along Ashford Avenue in both directions. An aerial snapshot of the intersection is shown below.

Site Driveway A intersects NY 9A as an unsignalized T-type intersection. The northbound approach provides two lanes for shared thru and right turns, while the southbound approach provides one shared lane for thru and left turns. Site Driveway A is the existing northern driveway along NY 9A which provides a single lane for left and right turns. Under proposed conditions, the driveway would be reconstructed and converted to an egress only driveway for right turn exiting movements only.

The intersection of NY 9A and Site Driveway B is a three-legged unsignalized intersection. The northbound approach provides two lanes for shared thru and right turns, while the southbound approach provides one shared lane for thru and left

turns. Site Driveway B is the existing southern driveway along NY 9A which provides a single lane for left and right turns. Under proposed conditions, the driveway would be reconstructed and converted to an ingress only driveway.

Ridge Road intersects NY 9A opposite and offset from Bridge Street at a four-legged unsignalized intersection. A single lane is provided along all approaches for thru and turning movements. The Ridge Road and Bridge Street approaches are under stop control. An aerial snapshot of the intersection is shown below.

The intersection of Ridge Road and Site Driveway C is a three-legged unsignalized intersection. Ridge Road provides a single lane for both the eastbound and westbound approaches for thru and turning movements. Site Driveway C is the existing driveway along Ridge Road which provides a single lane for left and right turns. Under proposed conditions, this driveway would removed.

B. Existing Volumes

Traffic counts were performed at the studied intersections in order to quantify and analyze existing peak hour volumes as well as establish base conditions for projecting future operations. The counts included pedestrian activities and truck

traffic.

Traffic counts were conducted from 7:00 – 9:00 AM and from 4:00 – 6:00 PM at all the studied intersections on Thursday October 26, 2023. The peak hour volumes occurred between 7:30-8:30 AM during the weekday morning and 5:00-6:00 PM during the weekday afternoon. The intersection traffic count data is included in Appendix C.

The counted peak hour volumes were compared between nearby studied intersections and were conservatively balanced between the studied intersections. The adjusted peak hour volumes are reflected in our 2023 Existing Volumes contained in Appendix B.

C. Intersection Analysis Methodology

The intersections have been analyzed based on the methodologies of the Highway Capacity Manual 6th Edition. Information derived from the manual relative to the level of service criteria is provided below.

1. Level-of-Service Criteria for Signalized Intersections

Levels of Service (LOS) for signalized intersections are defined in terms of delay, which is a measure of driver discomfort, frustration, fuel consumption, and lost travel time. The delay experienced by a motorist is made up of a number of factors that relate to control, geometrics, traffic and incidents. Total delay is the difference between the travel time actually experienced and the reference travel time that would result during ideal conditions: in the absence of traffic control, in the absence of geometric delay, in the absence of any incidents, and when there are no other vehicles on the road. Only the portion of total delay attributed to the control facility is quantified. This delay is called control delay. Control delay includes the delays of initial deceleration, move-up time in the queue, stops, and reacceleration. In this chapter, control delay may also be referred to as signal

delay. Specifically, LOS criteria for traffic signals are stated in terms of the average control delay per vehicle, typically for a peak 15-minute analysis period. Delay is a complex measure and is dependent on a number of variables, including the quality of progression, the cycle length, the green ratio, and the volume/capacity (*v/c)* ratio for the lane group in question.

LOS A describes operations with very low control delay, up to 10 seconds per vehicle. This level of services occurs when progression is extremely favorable and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.

LOS B describes operations with control delay greater than 10 and up to 20 seconds per vehicle. This level generally occurs with good progression, short cycle lengths, or both.

LOS C describes operations with control delay greater than 20 and up to 35 seconds per vehicle. These higher delays may result from fair progression, longer cycle lengths, or both.

LOS D describes operations with control delay greater than 35 and up to 55 seconds per vehicle. At level D, the influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high *v/c* ratios. Many vehicles stop, and the proportion of vehicles not stopping declines.

LOS E describes operations with control delay greater than 55 and up to 80 seconds per vehicle. These high delay values generally indicate poor progression, long cycle lengths, and high v/c ratios. Individual cycles failures are frequent occurrences.

LOS F describes operations with control delay in excess of 80 seconds per

vehicle and/or the arrival flow rates exceed the capacity of the intersection. It will also occur at high v/c ratios below 1.0 with many individual cycle failures. If the volume-to-capacity (v/c) is greater than 1.0, the LOS is considered an F, even if the delays are lower than 80 seconds.

The LOS criteria for signalized intersections are presented below.

Signalized Level of Service Criteria		
Control Delay (Seconds/Vehicle)	**LOS by Volume-to-Capacity Ratio**	
	v/c ≤ 1.0	**v/c > 1.0**
≤10	A	F
>10 and ≤20	B	F
>20 and ≤35	C	F
>35 and ≤55	D	F
>55 and ≤80	E	F
>80	F	F

For approach-based and intersectionwide assessments, LOS is defined solely by control delay.

2. Level of Service for Unsignalized Intersections

The Levels of Service (LOS) for Two Way Stop Control (TWSC) and All Way Stop Control (AWSC) intersections and Roundabouts are determined by the computed or measured control delay and are defined for each minor movement. LOS is not defined for the intersection as a whole for TWSC intersections. LOS criteria are presented below.

Unsignalized Level of Service Criteria		
Control Delay (Seconds/Vehicle)	**LOS by Volume-to-Capacity Ratio**	
	v/c ≤ 1.0	**v/c > 1.0**
≤10	A	F
>10 and ≤15	B	F
>15 and ≤25	C	F
>25 and ≤35	D	F
>35 and ≤50	E	F
>50	F	F

For TWSC intersections, the LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or the intersection as a whole at TWSC intersections. For approach-based and intersectionwide assessments at AWSC intersections and roundabouts, LOS is defined solely by control delay.

Average control delay less than 10 seconds/vehicle are defined as LOS A. Follow-up times of less than 5 seconds/vehicle have been measured when there is no conflicting traffic, so control delays of less than 10 seconds/vehicle are appropriate for low flow conditions. If the volume-to-capacity (v/c) is greater than 1.0, the LOS is considered an F, even if the delays are lower than 50 seconds.

The LOS criteria for unsignalized intersections are somewhat different than the criteria used for signalized intersections. The primary reason for this difference is that drivers expect different levels of performance from different kinds of transportation facilities. A number of driver behavior considerations combine to make delays at signalized intersections less onerous than delays at unsignalized

intersections. For example, drivers at signalized intersections are able to relax during the red interval, whereas drivers on the minor approaches to unsignalized intersections must remain attentive to the task of identifying acceptable gaps and vehicle conflicts. Also, there is often much more variability in the amount of delay experienced by individual drivers at an unsignalized intersections versus that at signalized intersections. For these reasons, it is considered that the control delay threshold for any given LOS would be less for an unsignalized intersection than it would be for a signalized intersection.

D. Existing Operations

The intersection capacity analyses based on the existing volumes and conditions are shown on Tables 2 and 3. The specific volume/capacity ratios, delay for average vehicle in seconds and the associated levels of service are summarized for each lane group on Tables 2 and 3.

During the peak weekday AM hour, the overall intersection of NY 9A and Ashford Avenue operates at a level of service D. The eastbound left turn, westbound left turn, westbound thru, northbound left turn, southbound approach, southbound thru and Addyman Square approach operate at a level of service E. All other movements at the studied intersections operate at a level of service D or better during the peak weekday AM hour.

During the peak weekday PM hour, the overall intersection of NY 9A and Ashford Avenue operates at a level of service E. The eastbound approach and lanes, westbound approach, westbound left turn, westbound thru, and Addyman Square approach operates at a level of service E. The Bridge Street approach to NY 9A operates at a level of service F. All other movements at the studied intersections operate at a level of service D or better during the peak weekday PM hour.

III. PROJECTED TRAFFIC CONDITIONS

A. No-Build Volumes

In order to project future traffic increases to the 2026 design year, the existing volumes were increased by a general growth rate of 1.0% per year compounded annually. Based on NYSDOT's 2019 Traffic Volume Report, the traffic volumes on NY 9A along the property's frontage decreased from the 2012 count data to 2019 count data by 0.20% per year. Based on the State's traffic volume data, the general growth rate utilized in this study provides a conservative analysis. Based on discussions with the Village Staff and their consultant, there are no significant other developments to be considered within the study area. The resulting 2026 no-build volumes represent traffic operations in 2026 without the redevelopment of the site.

The intersection capacity analyses based on the no-build volumes and conditions are shown on Tables 2 and 3. The specific volume/capacity ratios, delay for average vehicle in seconds and the associated levels of service are summarized for each lane group on Tables 2 and 3.

During the peak weekday AM hour, the overall intersection of NY 9A and Ashford Avenue are projected to increase in delay from a level of service D under existing conditions to a level of service E under no-build conditions. The Ashford Avenue eastbound and westbound approaches are projected to increase in delay from a level of service D under existing conditions to a level of service E under no-build conditions. All other turning movements at the studied intersections under no-build conditions are projected to operate at the same levels of service as experienced under existing conditions during the peak weekday AM hour.

During the peak weekday PM hour, the NY 9A northbound left turn, NY 9A southbound approach, NY 9A southbound thru lane and right turn lane at its intersection with Ashford Avenue are projected to increase in delay from a level of service D under existing conditions to a level of service E under no-build conditions. All other turning movements at the studied intersections under no-build conditions are projected to operate at the same levels of service as experienced under existing conditions during the peak weekday PM hour.

B. Build Volumes

As previously mentioned, the Applicant proposes to construct a 2,210 square foot convenience store with 6 fueling position. The property was the location of a former gas station and repair shop contained within a 2,370 square foot building with 2 gasoline pump islands (4 fueling positions). The projected traffic associated with the proposed use and former use are based on information published by Institute of Transportation Engineers (ITE) in its publication "Trip Generation Manual, 11th Edition." Table 1, contained in Appendix A, depicts the traffic volumes associated with the former and proposed use as well as incorporates pass-by trips for the uses which are trips that typically drive past or near the subject property and will patronize the development when it is completed.

It should be noted that based on ITE data, a significant portion of the peak hour trips generated at this type of development are attracted as pass-by or diverted link trips. ITE data shows that a gasoline station use, like the proposed development, can anticipate 58% and 42% of its peak weekday AM and peak weekday PM hour trips, respectively, to be pass-by or diverted link trips. To provide a conservative analysis, the pass-by percentage was capped at 25% for the proposed use. The proposed development will result in approximately 72 and 83 primary trips during the peak weekday AM and PM hours, respectively. For comparative purposes, the proposed development will result in approximately 41 net additional primary trips during the peak weekday AM and PM hours compared to the former development. To provide

a conservative analysis, this study does not consider a reoccupancy of the volumes associated with the former development.

The primary volumes were routed through the studied intersections based on existing traffic volumes as well as consideration of the arrival & departure patterns of the site traffic and a review of the adjacent roadway network. The pass-by volumes were routed through the studied intersections based on existing traffic volumes. Adding the development related traffic to the no-build volumes results in 2026 Build Volumes which reflect projected volumes after the completion of the development.

IV. FINDINGS & CONCLUSION

Based on a review of the capacity analyses, we recommend improvements of the traffic signal timing during both studied peak hours. The recommended timing adjustment involves shifting 5 seconds from the Addyman Square phase to provide 3 seconds to the Ashford Avenue eastbound left turn phase and 2 seconds to the NY 9A northbound left turn phase.

Intersection traffic capacity analyses computed based on the Build Volumes with the proposed signal timing improvements indicate that the studied intersections will operate at the same levels of service as projected for the No-Build Volumes during all studied peak hours except for three movements during the peak weekday AM hour and one movement during the peak weekday PM hour. Projected operations with the proposed development are shown on Tables 2 and 3.

During the peak weekday AM hour, the Ashford Avenue eastbound thru/right lane and NY 9A southbound right turn lane are projected to increase in delay from a level of service D under no-build conditions to a level of service E under build conditions with the timing improvements. The Addyman Square approach to NY 9A is projected to increase in delay from a level of service E under no-build conditions to a level of service F under build conditions. The Addyman Square delay under build conditions is 0.3 seconds into the level of service F threshold. The proposed Site Driveway A is projected to operate at

a level of service B while turning left from NY 9A into Site Driveway B is projected to operate at a level of service A. All other turning movements at the studied intersections under build conditions are projected to operate at the same levels of service as projected under no-build conditions during the peak weekday AM hour.

During the peak weekday PM hour, the Addyman Square approach to NY 9A is projected to increase in delay from a level of service E under no-build conditions to a level of service F under build conditions. The Addyman Square delay under build conditions is 8.3 seconds into the level of service F threshold. The proposed Site Driveway A and proposed Site Driveway B are projected to operate at a level of service B. All other turning movements at the studied intersections under build conditions are projected to operate at the same levels of service as projected under no-build conditions during the peak weekday PM hour.

It is the professional opinion of JMC that the proposed convenience store with a gasoline filling station will not have a significant impact on overall traffic operations in the study area.

Respectfully submitted,

JMC Planning Engineering Landscape Architecture & Land Surveying, PLLC

i. Net Additional Primary Volumes (Row i = Row f - Row c)	20	21	41	20	21	41

Notes:

(1) Trip generation is based on Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition.

(2) Gasoline / Service Station (ITE Code 944) is defined by ITE as including gasoline/service stations where the primary business is the fueling of motor vehicles. The sites included generally have a small building (less than 2,000 gross square feet) that houses a cashier and limited space for motor vehicle maintenance supplies and general convenience products. A gasoline/service station may also have ancillary facilities for servicing and repairing motor vehicles and may have a car wash.

(3) Convenience Store/Gasoline Station (ITE Code 945) is defined by ITE as a facility with a co-located convenience store and gas station. The convenence store sells grocery and other everyday items that a person may need or want as a matter of convenience. The gas station sells automotive fuels such as gasoline and diesel.

Intersection Summary

Control Type: Actuated-Uncoordinated	
Maximum v/c Ratio: 1.08	
Intersection Signal Delay: 62.4	Intersection LOS: E
Intersection Capacity Utilization 86.1%	ICU Level of Service E
Analysis Period (min) 15	

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 1: NY 9A & Ashford Avenue & Addyman Square

Ardsley Village Board of Trustees - Annual Reorganization Meeting

8:00 PM - Monday, December 4, 2023
507 Ashford Avenue & Zoom Platform

Present:	Mayor	Nancy Kaboolian
	Deputy Mayor/Trustee	Steve Edelstein
	Trustee	Asha Bencosme
	Trustee	Andy Di Justo
	Trustee	Barry McGoey
	Trustee	Sheila Narayanan
	Village Manager	Joseph L. Cerretani
	Village Clerk	Ann Marie Rocco
	Village Attorney	Robert J. Ponzini
Absent:		

1. CALL TO ORDER-PLEDGE OF ALLEGIANCE-ROLL CALL

1.1 Mayor Kaboolian opened the the Annual Reorganization Meeting of the Village of Ardsley on December 4, 2023 at 8:00 p.m.

Roll Call:
Mayor Nancy Kaboolian
Deputy Mayor/Trustee Steve Edelstein
Trustee Andy DiJusto
Trustee Asha Bencosme

Trustees Sworn In:
Trustee Barry McGoey
Trustee Sheila Narayanan

Mayor Kaboolian thanked Trustee Bencosme for her 2 year service on the Board of Trustees. Her input and insight has been valuable and hopes she stays involved in the community.

Trustee Bencosme stated that she is glad to have had the opportunity to serve the Village and has learned how important it is to be involved in local government. Thanked the team at Village Hall, Police Chief and his department for keeping us safe. Thanked our volunteers in the Fire Department and ASVAC. Encouraged residents to get involved and attend events.

Trustee DiJusto thanked Trustee Bencosme and will miss working with her.

Trustee Edelstein thanked Trustee Bencosme for her service on the Board and CAC.

Mayor Kaboolian thanked County Executive Latimer for joining the meeting.

2. OATH OF OFFICE

2.1 Village Justice, David I. Rifas administers Oath of Office and duly swears in Mayor-Elect Nancy Kaboolian

Village Justice, David I. Rifas administers Oath of Office and duly swears in Trustee - Elect Andy DiJusto

Village Justice, David I. Rifas administers Oath of Office and duly swears in Trustee - Elect Sheila Narayanan

Justice, Erin O'Shea McGoey administers Oath of Office and duly swears in Appointed Trustee - Barry McGoey

3. MAYOR AND THE BOARD APPOINTS THE FOLLOWING LIAISONSHIPS

3.1	Deputy Mayor	Trustee Steve Edelstein
	Police Department Commissioner	Mayor Nancy Kaboolian
	Fire Department Committee	Mayor Nancy Kaboolian
	Service Award Committee	Mayor Nancy Kaboolian
	Recreation Committee	Trustee Barry McGoey
	Library	Trustee Sheila Narayanan

School Board	Mayor Nancy Kaboolian & Trustee Steve Edelstein
ASVAC	Trustee Andy DiJusto
Youth Council	Trustee Barry McGoey
Historical Society	Trustee Andy DiJusto
Senior Citizens	Trustee Andy DiJusto
TPPCS	Trustee Andy DiJusto
Merchant & Professional Affairs	Trustee Steve Edelstein

Pollinator Pathway	Trustee Steve Edelstein
Conservation Advisory Committee	TBD

4. THE MAYOR APPOINTS AND VILLAGE BOARD APPROVES THE FOLLOWING:

4.1	Village Manager	Joseph Cerretani	2023-2024
	Village Clerk/Registrar	Ann Marie Rocco	2023-2024

Village Treasurer/Deputy Registrar	Leslie Tillotson	2023-2024
Deputy Treasurer	Ann Marie Rocco	2023-2024
Deputy Village Clerk	Leslie Tillotson	2023-2024
Village Prosecutor	Brian Murphy	2023-2024
Associate Judge	E. John Morehouse	2023-2024

Moved by Trustee DiJusto, Seconded by Trustee Edelstein and passed unanimously.

RESOLVED, that the Village Board of the Village of Ardsley hereby approves the above appointments.

Carried by the following votes: 5-0-0
Ayes: Mayor Kaboolian, Trustee DiJusto, Trustee McGoey, Trustee Narayanan & Trustee Edelstein
Nays: None
Abstained: None

5. THE MAYOR RECOMMENDS AND THE BOARD APPOINTS:

5.1 PLANNING BOARD 5 YEAR TERM

Bernard Preisser	2028

5.2 BOARD OF ARCHITECTURAL REVIEW 3 YEAR TERM

Vladimir Kowalyk	2026

5.3 LIBRARY BOARD 5 YEAR TERM

Holly Halmo	2028

5.4 ZONING BOARD OF APPEALS 5 YEAR TERM

Morton David	2028

5.5 SERVICE AWARD COMMITTEE 1 YEAR TERM

Troy Roberts	2024
Ed Gotthelf	2024

5.6 RECREATION COMMISSION 1 YEAR TERM

Lorraine Kuhn	2024
David Whitehead	2024
Alka Shukla	2024
Mona Swanson	2024
Abe Falek	2024
Christina Bruno	2024

5.7 CABLE TV COMMITTEE 1 YEAR TERM

George Malone, Cable Access Director	2024
Robert Wootten, Chairperson	2024

5.8 ARDSLEY YOUTH COUNCIL 1 YEAR TERM

Theresa Del Grosso	2024
Andrea Fallick	2024

Trustee Andy DiJusto
Trustee Barry McGoey
Trustee Sheila Narayanan

Also present were: Village Manager, Joseph Cerretani, Village Attorney, Robert J. Ponzini and Village Clerk, Ann Marie Rocco

2. APPROVAL OF MINUTES:

2.1 November 20, 2023 Board of Trustees Regular Meeting Minutes

Moved by Trustee Edelstein, Seconded by Trustee DiJusto and passed unanimously.

RESOLVED, that the Village Board of the Village of Ardsley hereby approves the minutes of the Regular Meeting of Monday, November 20, 2023 as submitted.

Carried by the following votes: 3-0-2
Ayes: Mayor Kaboolian, Trustee DiJusto & Trustee Edelstein
Nays: None
Abstained: Trustee McGoey & Trustee Narayanan

3. DEPARTMENT REPORTS

1. LEGAL

1.a Village Attorney, Robert J. Ponzini stated he had nothing to report other than those items he is working on with staff.

2. MANAGER

2.a Village Manager Cerretani welcomed Trustee Narayanan and Trustee McGoey and looks forward to working with the entire Board.

Village Manager, Joseph L. Cerretani read the following report:

1. **DPW GARAGE:** As per my last report, I had noted that the incorrect transformer was delivered and we would need to find a temporary solution. Good news to report on that front, a temporary solution utilizing existing equipment and retrofitting components has been procured and will be able to provide full power to the site while the permanent transformer can be obtained from ConEdison. The only setback with this temporary solution is that the backup generator will not be able to work to power the facility in the event of a power outage. However, this will allow contractors to continue to work through the winter, heat the building properly, and allow us to finish the project over the next few months. Our new adjusted timeline for completion is now looking like March 2024. Contractors are continuing finished work in the admin area, including tile work, painting, and fixtures. The entire site is scheduled to have binder rolled out, which is preliminary stage of paving, this week. Garage bay doors began installation today, and we expect the doors to be complete in the next two weeks. All other trades are continuing to work and keeping the project moving forward.

2. **YOUTH ADVOCATE:** I spoke with Student Assistance Services this morning to get an update on the status of the replacement of the Youth Advocate position. Unfortunately they do not have a candidate to present to us yet. They are continuing to work on finding a replacement, either on a temporary or permanent basis. I will continue to check in regularly with them for further updates.

3. **VILLAGE TAXES**: The second installment of the Village tax bill became due and payable on December 1st, 2023 and can be paid without penalty until 4:00 pm on Tuesday, January 2, 2024. Payments arriving via mail postmarked by the USPS after January 2, 2024, or arrive after January 2, 2024 without a postmark, will be assessed a late penalty as required by New York State Real Property law. Meter-mailed postmarks are not valid proof of timely payment. No Village official is empowered to waive the late fee for any reason. Residents are asked not to bring their tax payment in on Sunday, December 31, 2023 since our offices will be closed.

3. ABSTRACT

3.a December 4, 2023 Abstract Report
Village Manager, Joseph Cerretani read the October 2, 2023 Abstract Report as follows:
From the General Fund:$68,854.56 from the Trust & Agency Fund:$3,765.67 and from the Capital Fund: $12,215.51 Sewer Fund: $0.00

Moved by Trustee Edelstein, Seconded by Trustee DiJusto and passed unanimously.

2. NEW BUSINESS:

2.1 Consider a Resolution for Authorization to Apply for Hazard Mitigation Grant Program Flood Mitigation Assistance Grant

Moved by Trustee McGoey, Seconded by Trustee DiJusto and passed unanimously.
WHEREAS, the Village of Ardsley Board of Trustees is applying for a Hazard Mitigation Grant Program (HMGP) Flood Mitigation Assistance (FMA) grant from FEMA; and

WHEREAS, this grant will fund the purchase of a permanent pump to be installed at Village of Ardsley Flood Control Facility at the Village Green; and

WHEREAS, this pump will be used to control floodwaters during extreme storm events and also reduce the amount of water in the Flood Control Detention Basin to allow for greater flood storage capacity,

NOW, THEREFORE, BE IT RESOLVED: That the Village of Ardsley Board of Trustees does hereby agree to apply for the HMGP FMA opportunity and authorizes the Village Manager to submit the application for funding to purchase a permanent pump for the Village of Ardsley Flood Control Facility.

2.2 Consider a Resolution for Authorization to Apply for Hazard Mitigation Grant Program Building Infrastructure and Communities Grant

Moved by Trustee Narayanan, Seconded by Trustee McGoey and passed unanimously.
WHEREAS, the Village of Ardsley Board of Trustees is applying for a Hazard Mitigation Grant Program (HMGP) Building Infrastructure and Communities (BRIC) grant from FEMA; and

WHEREAS, this grant will fund the installation of stormwater conveyance system on Powderhorn Rd and Captain Honeywells Rd and its connection to the Villages stormwater system on Heatherdell Rd; and

WHEREAS, this project will be used to control floodwaters during extreme storm events, reduce soil and vegetation loss, and help reduce property damage,

NOW, THEREFORE, BE IT RESOLVED: That the Village of Ardsley Board of Trustees does hereby agree to apply for the HMGP BRIC opportunity and authorizes the Village Manager to submit the application for the installation of a stormwater conveyance system on Powderhorn Rd and Captain Honeywells Rd and its connection to the Villages stormwater system on Heatherdell Rd.

11/30- Attended and coached the teacher team for the Harlem Globetrotters Game

During the Month of November, the community-policing unit installed five child safety seats.

The community-policing unit would like to wish everyone a happy holiday season, and remind all that we are here for local support throughout the year. We understand that the Holidays can be a difficult time for some, and want to remind everyone, we are here for them no matter the time of day. We hope your holiday is bright, and your New Year is filled with Joy.

RESOLUTION AUTHORIZING THE VILLAGE MANAGER TO SIGN CONTRACT FOR BOND COUNSEL SERVICES WITH ORRICK, HERRINGTON & SUTCLIFFE, LLP

RESOLVED, that the Village Board of the Village of Ardsley hereby authorizes the Village Manager to execute the proposed contract for bond counsel services with Orrick, Herrington, Sutcliffe, LLP located at 51 West 52nd Street, New York, New York 10019-6142 from January 1, 2024 through December 31, 2024.

VILLAGE OF ARDSLEY
BOND COUNSEL CONTRACT
2024

This Agreement is entered into this 1st day of January 2024 by and between the Board of Trustees of the Village of Ardsley (hereinafter the "VILLAGE"), having its principal place of business for the purpose of this Agreement at 507 Ashford Avenue, Ardsley, New York 10502, and Orrick Herrington & Sutcliffe, LLP (hereinafter "CONSULTANT"), having its principal place of business for the purpose of this Agreement at 51 West 52nd Street, New York, New York.

A. TERM

The term of this Agreement shall be from January 1, 2024 through December 31, 2024, inclusive, unless terminated early as provided for in this Agreement. It is understood that the VILLAGE is under no obligation to renew this Agreement upon its expiration.

B. SERVICES AND RESPONSIBILITIES:

The Bond Counsel shall:

1. Render an opinion in connection with the issuance of obligations by the VILLAGE regarding:
   a. whether the VILLAGE's obligations have been properly authorized and issued and are valid,
   b. that the essential sources of security for the VILLAGE's obligations have been legally provided for, and
   c. that interest on the VILLAGE's obligations is exempt from federal income taxation.
2. Prepare a record that is sufficient to render the necessary legal opinions.
3. Participate in conferences and telephone discussions with representatives of the VILLAGE regarding the capital and/or cash flow financing requirements.
4. Draft authorizing documents for the Board relating to financings, and proceedings with respect to the sale of the VILLAGE's notes and/or bonds;
5. Advise the VILLAGE on best practices and recommended procedures, and make modifications to policy and procedure as requested by the VILLAGE for efficient operations and auditing requirements.
6. Provide advice and consultation with respect to compliance with applicable provisions of the Internal Revenue Code of 1986, as amended, including all federal arbitrage regulations and the disclosure rules of the Securities and Exchange Commission;
7. Participate with VILLAGE and its financial advisors in scheduling and structuring each note and/or bond financing;
8. Assist in drafting and review of agreements, forms and underlying documentation relating to the financing;
9. Assist in the preparation and review of the official statement and other necessary documents, if any, used in the public offering of VILLAGE's notes and/or bonds;
10. Assist, upon request, in the negotiation of contracts and other matters related to the note and/or bond offering and rendering of additional opinions as to specific matters;
11. Provide administrative coordination of meetings and sale and closing arrangements;

12. Consult with the VILLAGE, its accountants and attorneys, credit rating agencies, municipal bond insurers and others in regard to the financing;

13. Attend to all necessary Internal Revenue Service issue reporting requirements, as required pursuant to the Internal Revenue Code of 1986, as amended;

14. Prepare, draft and review closing papers including, but not limited to:

    a. Certificate of Determination of the Village Treasurer,

    b Closing Certificate,

    c. VILLAGE Attorney's Certificate, (if required)

    d. Arbitrage and Use of Proceeds Certificate, and

    e. Certificate with Respect to the Official Statement;

15. Prepare the form of the note and/or bond for each note and/or bond sale;

16. Prepare the draft opinion for each note and/or bond sale, and the furnishing of same to the credit rating agencies, as requested;

17. Prepare all continuing disclosure agreements, as required under applicable federal securities laws and/or regulations;

18. Deliver securities to The Depository Trust Company in New York City to be held in escrow until the closing;

19. Render final approving legal opinion with respect to each financing;

20. Administer coordination of closings with the VILLAGE, financial advisor, underwriter and the Depository Trust Company;

21. Provide continuous and unlimited communication and assistance to the VILLAGE throughout the course of each financial transaction;

22. Meet Insurance Requirements.

23. Maintain and archive all claim files and will ensure strict confidentiality of all employee data, records, and files. Bond Counsel will not make available to any outside party, vendor, or sales or marketing organization, any records or information pertaining to VILLAGE or its employees.

24. Defend, indemnify and "hold harmless" the VILLAGE from any claim, demand, lawsuit, judgment, cost or expense, including reasonable attorney's fees, which arises from any negligent act or omission by Bond Counsel in the performance of services under this agreement for the VILLAGE. Not be responsible for any loss, damage, compliance error or expense caused by its failure to perform any duty or obligation under this Agreement which is due to causes beyond its control, such as an act of God, fire, flood, explosion, war, insurrection, riot, vandalism, strike, power failure, interruption or loss of telephone or telecommunication services, or governmental act of regulation; or the failure of the VILLAGE to provide complete and correct provider information and/or employee records and information.

C. COMPENSATION:

1. The VILLAGE shall pay CONSULTANT in accordance with the following fee schedule, following the presentation of detailed invoices by CONSULTANT to the VILLAGE.

    i. [SEE ATTACHED SERVICE AND FEE SCHEDULE]

2. The CONSULTANT shall submit invoices for payment on a per transaction basis.

3. The VILLAGE shall give the CONSULTANT notice of any invoice disputes within twenty (20) days of its receipt of the invoice, and reserves the right to withhold payment pending the resolution of the dispute.

D. MISCELLANEOUS

1. Termination:

    a. Either the CONSULTANT or the VILLAGE may terminate this Agreement upon thirty (30) days prior written notice to the other party. Such notice shall be given in accordance with the requirements for all notices to this Agreement set forth below.

    b. The parties agree that CONSULTANT'S failure to comply with any terms or conditions of this Agreement will provide a basis for the VILLAGE to immediately terminate this Agreement without any further liability to CONSULTANT.

    c. In the event the CONSULTANT or the VILLAGE terminates this Agreement with or without cause, such termination of the Agreement shall not discharge the parties' existing obligations to each other as of the effective date of termination.

2. Independent Contractor:

    a. CONSULTANT will be engaged as an independent Contractor, and therefore, be solely responsible for the payment of federal and state income taxes applicable to this Agreement.

    b Neither CONSULTANT nor any of its employees, agents, or assigns will be eligible for any employee benefits whatsoever relative to this contract including, but not limited to, Social Security, New York State Workers' Compensation, unemployment insurance, New York State Employees' Retirement System, health and dental insurance, or malpractice insurance or the like.

    c. VILLAGE, if required by Federal or State requirements, will submit a Form 1099 and IT 2102.1 respectively at year-end to the Federal Government for all individuals having a gross income exceeding $600.00, which thereupon will be reported for income tax purposes.

3. VILLAGE reserves the right to reject any of the CONSULTANT'S staff, which the VILLAGE, at its sole discretion, may deem unqualified.

4. Defense /Indemnification

    a. CONSULTANT agrees to defend, indemnify and hold harmless the VILLAGE, its officers, directors, agents, or employees against all claims, demands, actions, lawsuits, costs, damages and expenses, including attorneys' fees, judgments, fines and amounts arising from any willful act, omission, error, recklessness or negligence of the CONSULTANT, its officers, directors, agents or employees in

connection with the performance of services pursuant to this Agreement. The obligations pursuant to this provision shall survive the termination of this Agreement.

b. VILLAGE agrees to defend, indemnify and hold harmless the CONSULTANT, its officers, directors, agents, or employees against all claims, demands, actions, lawsuits, costs, damages and expenses, including attorneys' fees, judgments, fines and amounts arising from any willful act, omission, error, recklessness or negligence of the VILLAGE, its officers, directors, agents or employees in connection with the performance of services pursuant to this Agreement. The obligations pursuant to this provision shall survive the termination of this Agreement.

5. All notices which are required or permitted under this Agreement shall be in writing and shall be deemed to have been given if delivered personally or sent by registered or certified mail, addressed as follows:

   i. To Village: Village Manager

   ii. To Consultant: Douglas E. Goodfriend, Esq.

6. It is expressly understood that this Agreement shall not be assigned or transferred without prior written consent of the other party.

7. The failure of either party to enforce any provision of this Agreement shall not be construed as a waiver or limitation of that party's right to subsequently enforce every provision of this Agreement.

8. Should any provision of this Agreement for any reason, be declared invalid and/or unenforceable, such decision shall not affect the validity of the remaining provisions of this Agreement. Such remaining provisions shall remain in full force and effect as if this Agreement had been executed with the invalid provision(s) eliminated.

9. This Agreement and the rights and obligations of the parties hereunder shall be construed in accordance with and governed by, the laws and regulations of the State of New York and applicable Federal laws and regulations arising under this Agreement shall be litigated in the Courts of Westchester County, New York.

10. This Agreement is the complete and exclusive statement of the Agreement between the parties, and supersedes all prior or contemporaneous, oral or written: agreements, proposals, understandings, representations, conditions or covenants between the parties relating to the subject matter of the Agreement.

11. This Agreement may not be changed orally, but only by an Agreement, in writing, signed by authorized representatives of both parties.

12. This Agreement, and any amendments to this Agreement, will not be in effect until agreed to in writing and signed by authorized representatives of both parties.

IN WITNESS THEREOF, the parties hereto have executed this Agreement the day and year above written.

$2,500 for Town district consolidation proceedings.

$1,250 for Town district Section 202-b improvement proceedings.

$1,250 for School District proposition election proceedings or Town, Village or Fire District election proceedings for bond resolution referendum.

HOURLY RATES

All billing will be on the basis of this fee schedule without the addition of hourly rates for attorneys or paralegals, unless the express written permission of the client in advance of performance of any duties to be based on hourly rates has been obtained.

NO INCIDENTAL EXPENSE CHARGES

* * * * *

ORRICK'S FEE COVENANTS

Orrick makes the following covenants with respect to its fees:

1) Once retained as Bond Counsel by any client pursuant to this schedule, the fees for any financing initiated on or after the date of this schedule shall be charged according to this schedule and will not be subject to increase by any subsequent fee schedule changes;

2) Any fees charged pursuant to this schedule shall remain in full force and effect for the entire course of the financing no matter how long it takes to complete the financing;

3) Orrick will not share any portion of its fees with any other professionals engaged by the Issuer in connection with the proposed financing; and

4) Orrick will not share in the fees of any other professionals engaged by the issuer in connection with the proposed financing.

RESOLUTION APROVING AND ACCEPTING THE SETTLEMENT OF FAIRMONT ARDSLEY LLC. SECTION 6.80-BLOCK 55-LOT 1.1, 1.2, 1.3, 1.4

WHEREAS, Fairmont Ardsley LLC has commenced a proceeding in Supreme Court, Westchester County to challenge the assessment placed on its property for the tax years 2019, 2020 and 2021, and

WHEREAS, the Village of Ardsley has contested that challenge and defended its assessment roll, and

WHEREAS, the Town of Greenburgh has defended this claim, in conjunction with the Village of Ardsley, the Village having adopted the assessment roll of the Town, and the Town having now settled on the following terms, and

WHEREAS, the Ardsley School District as intervenor has approved settlement on similar terms, and

WHEREAS, after consultation between the Village Attorney, the Town Attorney and Special Counsel for the Ardsley School District, and in light of the settlements by the Town and School District, the Village of Ardsley now believes that a settlement has been achieved which represents the best interests of the Village and its residents and resolves this lawsuit with out the risk and cost of further litigation,

NOW THEREFORE BE IT RESOLVED, that the Village Attorney is authorized to execute a Consent Judgment settling that property's Assessment years as follows:

	Lot	Reduced From	Reduced To	Reduction
2019	6.80-55-1.1	464,4000	464,000	0
	6.80-55-1.2	781,800	404,300	377,500
	6.80-55-1.3	391,600	391,600	0
	6.80-55-1.4	560,300	560,300	0
2022	6.80-55-1.4	1,239,300	1,100,000	139,300
2023	6,80-55-1.4	1,284,800	1,150,000	134,800

AND BE IT FURTHER RESOLVED, that the Village Treasurer is authorized to compute and process for payment the foregoing Consent Judgement upon execution of all of the parties and "So Ordered" by the Court and service upon the Village of Ardsley.

RESOLUTION APROVING AND ACCEPTING THE SETTLEMENT OF SUNSHINE ELMSFORD REALTY CORP. SECTION 6.10-BLOCK 1-LOT 8

WHEREAS, Sunshine Elmsford Realty Corp. has commenced a proceeding in Supreme Court, Westchester County to challenge the assessment placed on its property for the tax years 2020 and 2021, and

WHEREAS, the Village of Ardsley has contested that challenge and defended its assessment roll, and

WHEREAS, the Town of Greenburgh has defended this claim, in conjunction with the Village of Ardsley, the Village having adopted the assessment roll of the Town, and the Town having now settled on the following terms, and

WHEREAS, the Ardsley School District as intervenor has approved settlement on similar terms, and

WHEREAS, after consultation between the Village Attorney, the Town Attorney and Special Counsel for the Ardsley School District, and in light of the settlements by the Town and School District, the Village of Ardsley now believes that a settlement has been achieved which represents the best interests of the Village and its residents and resolves this lawsuit with out the risk and cost of further litigation,

NOW THEREFORE BE IT RESOLVED, that the Village Attorney is authorized to execute a Consent Judgment settling that property's Assessment years as follows:

	Assessment	Reduced to	Reduction
2020	$ 883,700	$ 838.750	$ 44,950
2021	1,095,000	990,000	105,000

AND BE IT FURTHER RESOLVED, that the Village Treasurer is authorized to compute and process for payment the foregoing Consent Judgement upon execution of all of the parties and "So Ordered" by the Court and service upon the Village of Ardsley.

RESOLUTION APROVING AND ACCEPTING THE SETTLEMENT OF 15-35 CENTER STREET SECTION 6.50-BLOCK 30-LOT 1, 6

WHEREAS, 15-35 Center Street LLC has commenced a proceeding in Supreme Court, Westchester County to challenge the assessment placed on its property for the tax years 2018, 2019, 2020 and 2022, and

WHEREAS, the Village of Ardsley has contested that challenge and defended its assessment roll, and

WHEREAS, the Town of Greenburgh has defended this claim, in conjunction with the Village of Ardsley, the Village having adopted the assessment roll of the Town, and the Town having now settled on the following terms, and

WHEREAS, the Ardsley School District as intervenor has approved settlement on similar terms, and

WHEREAS, after consultation between the Village Attorney, the Town Attorney and Special Counsel for the Ardsley School District, and in light of the settlements by the Town and School District, the Village of Ardsley now believes that a settlement has been achieved which represents the best interests of the Village and its residents and resolves this lawsuit with out the risk and cost of further litigation,

NOW THEREFORE BE IT RESOLVED, that the Village Attorney is authorized to execute a Consent Judgment settling that property's Assessment years as follows:

	Lot	Original Assessment	Reduced To	Reduction

	6.80-30-6	2,726,400	2,636,650	89,750
2019	6.80-30-1	3,900.500	3,796.400	104,100
	6.80-30-6	2,726,400	2,653,600	72,800
2020	6.50-30-1	3,900,500	3,825,750	74,750
	6,50-30-6	2,726,400	2,674,250	52,150
2022	6,80-30-1	3,964,200	3,716,950	247,250
	6.50-30.6	3,021,500	2,833,050	188,700

AND BE IT FURTHER RESOLVED, that the Village Treasurer is authorized to compute and process for payment the foregoing Consent Judgement upon execution of all of the parties and "So Ordered" by the Court and service upon the Village of Ardsley.

RESOLUTION RATIFYING A STIPULATION OF AGREEMENT BETWEEN THE VILLAGE OF ARDSLEY, DETECTIVE ANTHONY VACCA AND THE ARDSLEY PBA

RESOLVED, that the Village Board of Trustees hereby approves and ratifies the attached Stipulation of Agreement & Release between the Village of Ardsley, Detective Anthony Vacca and the Ardsley PBA, executed by the Village Manager on December 18, 2023, including all terms set forth herein.

STIPULATION OF AGREEMENT & RELEASE

This Stipulation of Agreement and Release (hereinafter "Agreement") is made and entered into as of this 18th day of December, 2023, by Anthony Vacca of 29 McLaughlin Drive, Marlboro, NY 12542, in his capacity as an individual and on behalf of his heirs, executors, administrators, attorneys, representatives, successors, and assigns (collectively hereinafter "Det. Vacca"), the Ardsley Policemen's Benevolent Association, Inc. ("PBA"), and the Village of Ardsley, its divisions and departments, the Village's present and former employees, appointed and elected officials of the Village, including the Mayor and all members of the Village Board of Trustees (both individually and in their official capacities), as well as all agents, attorneys, insurers, successors, and assigns (collectively hereinafter "Village").

WHEREAS, Det. Vacca has been employed in a full-time capacity by the Village since on or about April 23, 2002, and is presently employed as a Police Officer, with the designation of Detective, for the Village; and

WHEREAS, the Village and the PBA are parties to a collective bargaining agreement for the period June 1, 2019 through May 31, 2021 ("CBA"), and Det. Vacca, as a bargaining unit member of the PBA, is subject to the terms and conditions thereof; and

WHEREAS, Det. Vacca intends to resign, for purposes of retirement, from his position as a Police Officer with the Village; and

WHEREAS, Det. Vacca has expressed interest in continued employment with the Village outside of its Police Department; and

WHEREAS, issues/questions have arisen regarding the terms of Det. Vacca's separation from employment and possible re-hiring by the Village; and

WHEREAS, Det. Vacca, the PBA, and the Village have engaged in discussions to resolve Det. Vacca's employment status and any issues/questions regarding his separation and re-hiring,

NOW, THEREFORE, IT IS HEREBY STIPULATED AND AGREED by and among Det. Vacca, the PBA, and the Village (collectively hereinafter "Parties") as follows:

1. This Agreement shall constitute written notice and delivery of, and the Village's acceptance of, Det. Vacca's irrevocable resignation from employment as a Police Officer with the Village for purposes of retirement, including any and all other appointments and/or positions (*e.g.*, his designation as Detective), effective January 5, 2024.

Det. Vacca agrees that he shall execute the annexed resignation letter that will be effective January 5, 2024, and he shall submit the executed resignation letter to the Village simultaneously with his delivery of this Agreement.

Det. Vacca's resignation shall end his employment with the Village effective at 4:00 p.m. on January 5, 2024, and it shall take effect regardless of his retirement status with/in the New York State Police and Fire Retirement System ("PFRS").

2. In connection with, and in consideration for, Det. Vacca's voluntary irrevocable resignation, his release and waiver of any/all claims against the Village as set forth in this Agreement, and his promises set forth in this Agreement with respect to his separation pay, the Village agrees to hire Det. Vacca as a Recreation Assistant, effective January 8, 2024, subject to Westchester County Civil Service Rules, including but not limited to Rule 11 - Probationary Appointment. Det. Vacca's re-hiring by the Village as a Recreation Assistant is expressly conditioned upon his resignation, promises, and releases set forth in this Agreement.

The Village and Det. Vacca agree that the position of Recreation Assistant is non-competitive under Civil Service Rules and that Det. Vacca must complete five (5) years of continuous service as a Recreation Assistant to receive any rights pursuant to Section 75 of New York State Civil Service Law. The Village and Det. Vacca further agree that, upon his re-hiring, Det. Vacca will not be a bargaining unit member of any union, nor is the title of Recreation Assistant a recognized title in any collective bargaining agreement between the Village and any union.

Nothing herein shall preclude the Village from taking disciplinary action against Det. Vacca at any point during Det. Vacca's current employment or future employment with the Village, should Det. Vacca engage in any conduct that warrants such disciplinary action.

3. Subject to the conditions set forth above, the Village agrees to pay Det. Vacca at a rate of $32.65 per hour for work performed as Recreation Assistant. Det. Vacca agrees he shall regularly work seventeen and one-half (17.5) hours per week.

4. The Parties agree that, upon Det. Vacca's January 5, 2024 separation from employment for purposes of retirement, the Village would owe Det. Vacca a total of $20,656.30 pursuant to the CBA ("Separation Payment"). Notwithstanding Det. Vacca's separation from employment and the CBA, however, and pursuant to the terms of this Agreement, Det. Vacca and the PBA agree that the Separation Payment shall be deferred, in consideration for the Village's promises in this Agreement, and that Det. Vacca shall not receive the Separation Payment unless and until Det. Vacca completes two (2) full years of continuous and uninterrupted service with the Village in the position of Recreation Assistant.

Det. Vacca and the PBA agree that, notwithstanding the above, should Det. Vacca separate from employment with the Village for any reason (*e.g.*, resignation,

termination) prior to his completion of two (2) full years of continuous and uninterrupted service in the position of Recreation Assistant, then Det. Vacca shall permanently forfeit the Separation Payment in its entirety.

The Village agrees that, notwithstanding the above, in the event of Det. Vacca's death prior to his completion of two (2) full years of continuous and uninterrupted service in the position of Recreation Assistant, the Village shall pay the Separation Payment to the estate of Det. Vacca.

Det. Vacca and the PBA hereby expressly waive and release any and all claims, including grievances, arbitrations, charges, lawsuits, complaints, actions, or proceedings with any federal, state, county or local court or agency (including PERB) regarding Det. Vacca's separation from employment as a Police Officer or the deferral of Det. Vacca's Separation Payment for the two-year period referenced above.

Det. Vacca agrees that the Village has not made any representations, guarantees or commitments regarding the treatment that the PFRS, the New York State and Local Retirement System, the New York State Department of Taxation and Finance, or the Internal Revenue Service, or any other agency, may provide with regard to any payments or benefits set forth in this Agreement, including the Separation Payment, his separation from employment as a Police Officer, and his re-hiring as a Recreation Assistant.

5. Det. Vacca and the PBA agree that as of the date of their respective signatures on this Agreement, they have no grievances, arbitrations, charges, lawsuits, complaints, actions, or proceedings with any federal, state, county or local court or agency (including PERB) pending against the Village regarding Det. Vacca and his employment with the Village and/or the terms of this Agreement, and to the extent any such grievances, arbitrations, charges, lawsuits, complaints, actions, or proceedings regarding Det. Vacca and his employment with the Village and/or the terms of this Agreement do exist, they are hereby expressly discontinued and/or withdrawn with prejudice.

6. Det. Vacca, the PBA, and the Village agree that the Village shall provide health insurance coverage for Det. Vacca during his employment as Recreation Assistant. The Parties further agree that Det. Vacca shall contribute two percent (2%) of his base wage (pre-tax) towards the total cost of his health insurance while he is actively employed by the Village as Recreation Assistant.

The Parties agree that once Det. Vacca retires into the New York State Retirement System, his health insurance in retirement shall be provided in accordance with the CBA and his April 23, 2002 original hire date with the Village.

7. In exchange for the agreements and promises made by the Village in Paragraphs #1 through #6 above, and in full and complete settlement of any and all claims that Det. Vacca has or may have had whatsoever, asserted or unasserted, suspected or

unsuspected with respect to his employment with the Village, his separation from employment with the Village, or any other interactions of any kind with the Village, Det. Vacca hereby freely relinquishes, releases, and waives all possible grievances, arbitrations, lawsuits, claims, charges, and causes of action against the Village that may have arisen from his date of initial hire through the date of his separation (January 5, 2024) and the final ratification of this Agreement. Det. Vacca asserts that he currently has no pending grievances, arbitrations, charges, lawsuits, claims, or causes of action filed against the Village.

This release and waiver includes, but is not limited to, any claims under the following: the Village's rules / regulations / policies / employee handbook; the Village Code; Title VII of the Civil Rights Act of 1964; Age Discrimination in Employment Act (hereinafter "ADEA"); Older Workers Benefit Protection Act (hereinafter "OWBPA"); Americans with Disabilities Act; Civil Rights Acts of 1866, 1871, and/or 1991; Rehabilitation Act of 1973; 42 U.S.C. §§ 1981, 1983 and/or 1985; Consolidated Omnibus Budget Reconciliation Act (COBRA); Family and Medical Leave Act (FMLA); Fair Labor Standards Act (FLSA); Families First Coronavirus Response Act (FFCRA); Health Insurance Portability and Accountability Act (HIPAA); New York State Human Rights Law (Executive Law); New York State Civil Service Law (including Section 75); New York State General Municipal Law; New York State Village Law; New York State Workers' Compensation Law; New York State Retirement and Social Security Law; New York State Public Officers Law; New York State Civil Rights Law; New York State Labor Law; Westchester County Human Rights Law; Westchester County Civil Service Rules; New York State Constitution; United States Constitution; and all other federal, state, county and local or Village laws, ordinances, regulations, policies or orders (including New York State Executive Orders).

Among other things, these laws prohibit discrimination in employment based on race, disability, age, sex, sexual orientation, color, religion, creed, national origin, and marital status. This release and waiver of all claims shall also include any claims for retaliation, wages, attorneys' fees, constitutional violations, wrongful or abusive discharge, constructive termination, breach of implied or express contract, negligent or intentional infliction of emotional distress, impairment of economic opportunity, defamation, libel, slander, or any other action in violation of any applicable whistleblower statute or status, or any other tort, common law or contract claim. This release and waiver includes all claims now known to Det. Vacca, as well as all possible claims that are not now known to him.

Det. Vacca agrees that the Village's promises set forth in this Agreement are sufficient and valuable consideration for his agreements and waiver and release of all claims as set forth in this Paragraph and this Agreement. Det. Vacca agrees that he has reviewed this Agreement and all of its terms, including this Paragraph, with an attorney or representative of his choice.

8. Except as otherwise permitted by law, Det. Vacca agrees that no grievance, arbitration, claim, action, lawsuit, complaint, charge or proceeding with any federal, state,

county or local court or agency will be brought or filed by him, or by anyone on his behalf, against the Village arising from his employment with the Village or any other act or omission of the Village that has occurred at any time up to and through the date of Det. Vacca's January 5, 2024 separation and the final ratification of this Agreement.

The PBA agrees that it shall not file any grievance, arbitration, claim, action, lawsuit, complaint, charge or proceeding under any applicable collective bargaining agreement, or with any federal, state, county or local court or agency (including PERB), related to Det. Vacca, his separation from employment, any other facts related to his status, the terms of this Agreement, or Det. Vacca's employment with the Village at any time.

9. In the event Det. Vacca, or a representative on his behalf, files any charge or complaint permissible by law and permitted by this Agreement, or in the event of any enforcement or investigatory action undertaken by an administrative agency, Det. Vacca is not prevented or precluded by this Agreement from fully cooperating with the administrative agency or participating fully in the administrative agency's process. Det. Vacca expressly agrees, however, that by signing this Agreement, he is irrevocably waiving and forfeiting any right to recover any monetary or other individual (*i.e.*, equitable) relief as the result of any such proceeding, or any subsequent legal action brought by any administrative agencies.

10. Det. Vacca has been offered up to twenty-one (21) days to carefully read and consider his release of claims under the ADEA and OWBPA, and fully understands and agrees to all of the terms of the release herein. After consultation with his chosen attorney, Det. Vacca has decided to execute this Agreement without utilizing all of the twenty-one (21) days referenced herein.

11. Det. Vacca may revoke his release of claims under the ADEA and OWBPA within seven (7) days after he signs this Agreement. Revocation can be made by delivering written notice of revocation to Joseph Cerretani, Village Manager, Village of Ardsley, 507 Ashford Avenue, Ardsley, NY 10502. For this revocation to be effective, the written notice must be received by Mr. Cerretani no later than the close of business on the seventh day after Det. Vacca signs this Agreement. Although not required, it is recommended that such written notice, if sent by mail, be sent by certified mail, return receipt requested. If Det. Vacca revokes his release of claims under the ADEA and/or OWBPA, the Village shall, at its discretion, have the option of either enforcing the remaining terms of this Agreement or rescinding this Agreement in its entirety.

12. All Parties agree that the terms of this Agreement, as well as the facts related to this Agreement, including, but not limited to Det. Vacca's separation from employment, re-hiring by the Village, and deferral of the Separation Payment, shall not constitute a practice or precedent, or be used as evidence of a practice or precedent, by

or against the Village or the PBA with respect to Det. Vacca or any other PBA bargaining unit member.

13. This Agreement may not be altered except by a writing signed by the Village, the PBA, and Det. Vacca. This Agreement may not be changed orally.

14. This Agreement is entered into in the State of New York and shall be construed and interpreted in accordance with the laws of the State of New York, without regard to any state's choice of law or conflicts of law provisions.

15. Any dispute over an alleged breach of this Agreement shall be resolved by an action for breach of this Agreement. The Parties agree to the jurisdiction of the Courts of the State of New York to decide such an action and venue shall be in the Supreme Court of the State of New York, Westchester County. The Parties each waive any right to a jury trial in such action and agree that an action for breach of this Agreement will be decided by the court. The Party prevailing in such an action for breach of this Agreement shall be entitled to reimbursement of reasonable attorneys' fees and costs from the non-prevailing Party as permitted by law. Notwithstanding any breach of this Agreement by any Party, their respective obligations shall continue and shall be fully enforceable as set forth herein.

16. The Village, Det. Vacca, and the PBA each agree that by executing this Agreement, they are bound to the Agreement and all of its parts. The Village, Det. Vacca, and the PBA further represent and certify by their respective executions of this Agreement that they have had a full and fair opportunity to consult with their chosen attorney(s) before signing this Agreement, and that they have read it carefully and fully understand its contents, meaning, and import of this Agreement. They also represent and certify that the signing of this Agreement is voluntary and they have not been forced or coerced in any way, and that they are aware that it sets forth the entire agreement among the Parties, and that it has final and binding effects on them. Det. Vacca and the PBA also represent and certify that the Village has not made any representations concerning the terms and conditions of this Agreement other than those specifically contained herein. The Village, Det. Vacca, and the PBA further declare that they have been satisfactorily represented in this mater by their respective counsel.

17. The language of all parts of this Agreement shall be construed as a whole, according to its fair meaning, and not strictly for or against any Party, regardless of by whom it was drafted.

18. This Agreement represents the entire agreement among the Village, the PBA, and Det. Vacca on this matter as it relates solely to Det. Vacca's current and future employment with the Village, and it supersedes any prior written or oral statements, agreements, memoranda, correspondence, conversations, discussions, and/or

negotiations held, or which have taken place, between the Parties and/or their attorneys, agents, or representatives with respect to the matters covered by this Agreement.

19. If any of the provisions contained in this Agreement are declared illegal or unenforceable, in whole or in part, by a legal forum of competent jurisdiction, then such provision(s) or the unenforceable part(s) shall be deemed severable, such that all other provision(s) or enforceable part(s) shall remain valid and binding upon all Parties. The Parties recognize that specific remedies for such unenforceable provision(s) may be set forth in elsewhere in this Agreement.

20. This Agreement shall not become binding or effective until fully-executed by the Village, the PBA, and Det. Vacca, and until fully ratified by the Village Board of Trustees.

21. This Agreement may be executed in more than one counterpart, each of which shall be deemed an original, but all of which shall constitute the same instrument. This Agreement may also be executed electronically, as a PDF (even in counterparts), which shall serve as the Parties' original.

IN WITNESS WHEREOF, and intending to be legally bound hereby, the Village, the PBA, and Det. Vacca have all executed the foregoing Agreement.
